ABSTRACT

COMPETENCIES FOR PRESIDENTS OF AGRICULTURAL COOPERATIVES IN THE STATE OF SÃO PAULO, BRAZIL: ADMINISTRATORS' PERCEIVED PRIORITY RANKING

By

Marilia Henriette Guillaumon Gerges

Educational and training programs for members agricultural cooperatives in Brazil are essential if they are to thrive in today's highly competitive world. In order to design the most effective training programs, administrators of agricultural cooperatives in São Paulo, Brazil were 152 surveyed as to their perceptions of the highest priority competencies needed by presidents of these organizations. Seventy-four cooperative presidents and administrators completed the questionnaire (49 percent return rate) which included ranking their perceptions of the highest priority competency in each of nine clusters: Foundation of Cooperatives, Overall Knowledge, Cooperative Administration, Decision Making, Human Resource Management, Membership Relations, Vision, Communication, and Leadership.

This study was also designed to determine if organizational characteristics (type of commodity of the cooperatives, number of employees and membership), and administrators' personal characteristics (level of schooling,

years of experience, training programs attended and level of performance -- outstanding or average) were factors which influence perception of priority ranking competencies.

The results of this study revealed that cooperative administrators agreed on the importance of cooperative presidents possessing competencies having the knowledge and skill components, as well as the behavioral, affective, and motivational components. This study also revealed that the organizational and administrators' personal characteristics included in this study are not the sole factors that influence perceptions of competencies. There are other factors which may be relevant when designing a training program.

ACKNOWLEDGMENTS

The author wishes to express her sincere appreciation to Dr. O. Donald Meaders as chairman of the Doctoral Committee gave his advice and assistance throughout this study. Special acknowledgment is due to the members of the Advisory Committee, Dr. Carroll Wamhoff, Dr. Joe Levine and Dr. Larry Hamm.

Sincere thanks are due to Dr. John Schweitzer who gave invaluable assistance during the statistical analysis phase.

Special thanks are given to the Brazilian Government for their financial support, and to Cooperativa dos Cafeicultores da Região de Marilia for their cooperation and support during the data collection phase of this study.

A special word of gratitude is due to the authors' family in Brazil: to my mother, and all my brothers and sisters, Tera, Lisette, François, Carlinhos, Zito, Rose, Ignez, Yvonne, and Zizi. Your influence will always occupy the most profound and meaningful dimensions of my life.

Most of all, my heartiest thanks to my husband, Naji, for his unending love, inspiration, and support throughout this study.

I dedicate this work to my children. May they acquire a love for knowledge, that leads to God truth.

CHAPTER I

INTRODUCTION

Cooperatives are democratic organizations whose members are both owners and users. As owners of the cooperative the farmers/members elect from among themselves the leaders who will administer the organization.

The administration of cooperative organizations involves the application of the principles of business management and principles of cooperatives. The promotion of the well being of the members through meeting the economic needs of farmers in marketing products, processing and transporting those products, obtaining production supplies and providing the many services needed in modern farming operations are major, but not the sole, goals of the cooperative organization. The goals of cooperatives are far more than just increasing the economic welfare of members. They include attempting to have a positive effect on the social, cultural, and educational life of the community.

Fauguet said:

The primary aim of the cooperative institution is to improve the economic position of its members, but because of the method it employs and the qualities which it requires of its members and which it develops in them, it aims at and achieves a higher goal: to make men with a sense of both individual and joint responsibility, so that they may rise individually to a full personal life and collectively to a full social life (Fauquet 1965, 6).

Cooperatives which follow the Rochdale principles adopt education as one of their main principles which is listed fifth in the order of priorities. Dubbashi mentioned that:

Cooperative action takes its birth not in the legal process of registration of the cooperative society but in education (Dubbashi 1970, 109).

Cooperative education has a broad scope. The very coming and working together of people according to the principles of cooperatives constitute education. The fulfillment of other cooperative principles such as democratic control, limited interest on invested capital, dividends paid according to patronage, etc. ultimately depends on successful cooperative education.

COOPERATIVE EDUCATION AND TRAINING

It is an established principle that education and training are essential to the success of a business; agricultural cooperatives are no exception. In fact, because of the inherent nature of cooperatives as institutions of people, cooperatives require additional investments in human development (Hutchinson 1969). Experience all over the world has shown that if cooperatives are to thrive in a highly competitive world and at the same time follow their philosophy, they must place increasing emphasis on education and training (Youngjohns 1977).

The starting point of cooperative education is membership. Beyond member education, there is a special

need for education and training of the members who will administer the cooperative because of their special responsibilities. Dubbashi affirmed that:

Cooperators, particularly those who have to bear responsibility as office-bearers of cooperative societies, have to acquire some concrete body of knowledge, skill and technique based on sound theory and past experience (Dubbashi 1970, 118).

The members/administrators should be well prepared to respond to new situations which the job demands as competition sharpens, new technology is introduced, and as business expands and becomes more diversified. The dynamic changes of today's society require new dimensions of cooperative leadership. More than ever before competent administration is essential to the continued growth and development of cooperative business. In order to keep pace with these economic forces, cooperative organizations must make every effort to assure that their leaders are capable of discharging their responsibilities efficiently. As Vilstrup said:

Complex economic forces will generate the need for skilled leaders with new levels of training and courage. Growth and economic survival will clearly depend on ability to recognize trends, articulate issues, motivate membership and formulate sound decisions (Vilstrup 1983, 257).

The success of cooperatives is closely linked to the quality and competence of the administrators elected by the membership. Farmers who become administrators of the cooperatives are in a critical position to guide the

cooperatives' growth and direction and to be sure that the cooperatives' activities remain in all the members' interests, assuring the fulfillment of the economic and social responsibilities of the organization.

Management of cooperatives requires a coordinating force of leadership and vision; people with broad social, economic, and political knowledge are needed who can contribute to the planning and administration of the organizations' goals, represent agricultural interests, and apply good business practices as well as exert major efforts in promoting the human and educational development of its members.

The objective of management training programs is to strengthen operating methods and procedures by improving the abilities and visions of the persons charged with management responsibilities (Volkin and Griffin 1959). Some areas which usually require on-going training and continuing education are cooperative principles, leadership and decision making, human relations and communications, and capital structure and market development (Freppert 1985; Allen 1987; Volkin and Griffin 1959; Vilstrup 1982).

To maximize the probability of designing an effective training program is to determine the competencies that the persons participating in the training should possess to deliver the work effectively. Then, the objectives of the program must be pinpointed and its content developed.

This study was built on the expertise and experience of cooperative administrators in the State of São Paulo, Brazil in an attempt to determine the perceived priorities among the many different competencies needed by cooperative presidents. Those perceived priority competencies could serve as useful information when designing in-service training programs for cooperative presidents.

Following is an overview of the scope of cooperatives in the State of São Paulo, Brazil and a description of their management systems.

COOPERATIVES IN THE STATE OF SÃO PAULO

The State of São Paulo is the major economic center in Brazil. Cooperatives in the State of São Paulo comprise more than 12 percent of the total number of agricultural cooperatives in the country 1. They experienced their major growth during the 1960's and declined in number during the 1970's and 1980's (Table 1). Nonetheless, Schneider 1978 reported that cooperative membership seems to have grown steadily in recent years. During the year of 1988, cooperatives reported an increase of approximately 4 percent in their membership².

Cooperatives in the State of São Paulo have become an

Note : Adapted from " Os Cinquenta Anos do Departamento de Cooperativismo" Governo do Estado de Sao Paulo, Secretaria da Agricultura e Abastecimento, 1983.

important economic force. As reported by the Brazilian Cooperatives Organization (OCB)³, approximately 23 percent of the production and marketing of cotton, 48 percent of garlic, 53 percent of potatoes, 28 percent of coffee, 32 percent of milk, and 80 percent of soybeans in this state is done by cooperative organizations.

As processing and manufacturing methods become more technical, as capital requirements increase, and as more farmers join cooperatives, the administrators of cooperatives need to be better trained and educated so they can respond to the new challenges and complex operations of their organizations.

In recent years increased attention has been given to the importance of training programs for cooperative administrators in Brazil (Junqueira 1986; Nascimento 1982; Doray 1982; Nogueira & Coda 1982). However, as Nascimento 1982 mentions much more is needed in order to enable administrators to respond to the challenges the future will present to agricultural cooperatives.

Level of Education of Cooperative Members

When studying competencies for cooperative presidents, an investigation of the cooperatives' members' educational levels cannot be neglected since the cooperative president

³ Ibid.

will emerge in general. A certain minimum level of formal education is, indeed, required to deal with the relative complexity of the cooperative enterprises, as well as to participate in training programs. As presented in Table 2, the majority (67 percent) of cooperative members in the State of São Paulo in 1970 had at least completed elementary school, and the great majority (96 percent) were formally literate. Considering that since that time the availability of schooling has not had any significant change, this data may still be indicative of the present situation.

Table 2.--Level of education of cooperative members in the State of São Paulo, Brazil

The Management System of Cooperatives in the State of São Paulo, Brazil

The management system of cooperatives in the State of São Paulo is usually comprised of the Administrative Board of Directors, the Fiscal Board of Directors, and the General Assembly which includes every member.

^{*} Member's educational level for 1975. (Quoted from original).

The Administrative Board of Directors

The Administrative Board of Directors consists of five to nine cooperative members elected by the General Assembly for a three year period. A rotation of at least one third of its members each term is required. The members of the Administrative Board elects among themselves the cooperative president, vice-president and secretary. These three officers usually comprise the executive board. Some executive boards of cooperatives are composed of the president, administrative-director and financial-director, or president-director, administrative-director and superintendent-director.

Briefly, responsibilities of the Administrative Board of Directors are summed up in the bylaws by the statement that the Administrative Board of Directors plan and coordinate the operations and services of the cooperative and evaluate results. The following list consists of some typical bylaws' provisions regarding duties and responsibilities of the Administrative Board':

- . Establish quality control and deadlines;
- . Use and evaluate financial resources for the accomplishment of operations and services;
- . Estimate the profitability of operations and services and check viability;
- . Establish policies for hiring and dismissing

Estatuto de Cooperativa Agrícola. Secretaria da Agricultura, Departamento do Cooperativismo. São Paulo, 1986.

employees;

- . Establish policies for the efficient functioning of the organization;
- . Establish policies for the admission, dismissal, elimination and exclusion of members;
- . Call meetings;
- . Hire, if necessary, a professional executive to direct the work of management;
- . Assure that bylaws and regulations are observed by all members and employees;
- . Create education committees.

The Cooperative President

The cooperative president is the head of the organization who will implement the policies of the Administrative Board. The overall responsibilities of the president involve the thinking, judging and deciding of cooperative issues, and motivating members and employees to do their best to make the organization successful. The following list consists of some typical bylaw provisions delineating the duties and responsibilities of the cooperative president⁵.

- . Develop the cooperative's annual plan;
- . Supervise cooperative activities;
- . Verify the budget;
- . Sign bank checks with another executive director;
- . Call and direct meetings

⁵ Ibid

. Evaluate and present reports of the administration, cooperative's activities, inventory, and finances.

The Fiscal Board of Directors

The Fiscal Board of Directors is composed of three senior officers and three substitute officers, all cooperative members elected every year by the General Assembly. The rotation of at least two thirds of its members is required in every election. During the first meeting, the Fiscal Board of Directors will elect among the three senior officers a coordinator of the Fiscal Board who will have the responsibility to call and direct meetings, and a secretary who will keep the records of all meetings of the Board.

Briefly, responsibilities of the Fiscal Board of Directors are summed up in the bylaws by the statement that the Fiscal Board of Directors should regularly supervise the cooperative's operations, activities and services. The following list consists of some typical bylaw provisions used to spell out the duties and responsibilities of the Fiscal Board⁶:

- . Check the monthly accounting balance to verify if it is under the limits established by the Administrative Board;
- . Verify if debts incurred agree with the cooperative's plans;
- . Verify if operations and services correspond with the cooperative forecast in volume, quality and value and

⁶ Ibid

with the economic situation of the organization;

- . Certify if the Administrative Board of Directors are meeting regularly;
- . Check into members' complaints;
- Determine if duties and responsibilities with fiscal and administrative authorities and other cooperative organizations are being carried out properly;
- . Check if inventory turnover is being made according to the cooperative's regulations;
- . Report their evaluation about the cooperative and identify any irregularity to the Administrative Board of Directors.

General Assembly

The General Assembly, composed of every member, is the most powerful part of the cooperative's management system. The General Assembly has the power to make any decision of interest within the bylaws and regulations. The following list consists of some typical bylaw provisions dealing with the duties and responsibilities of the General Assembly?:

- . Elect the officers of the Administrative Board and the Fiscal Board of Directors;
- . Determine compensation of Administrative and Fiscal Board of Directors;
- . Determine the manner, form, and amount of patronage refunds, or share of losses;
- . Prepare the financial plan for the next administration.

⁷ Ibid

STATEMENT OF THE PROBLEM

The expansion, diversification and growing sophistication of cooperative enterprises are causing changes in the way cooperatives are run; these changes affect the management greatly. In the midst of rapid change, cooperative administrators have to be flexible so they can make adjustments to change. They have to keep learning new methods and techniques of business management while demonstrating a commitment to the principles of cooperatives. The basic knowledge of the philosophy of cooperatives, and the vital difference between cooperatives and other type of businesses should never be neglected (Patera 1985).

No longer can cooperatives afford to be managed by presidents who do not possess the special skills required for the management of cooperatives. Because presidents of cooperatives are farmers themselves, in many cases they are not prepared to respond to the individual or social needs of their members or organizations. They have not had the experience nor the training to deal with problems of the big organization that their cooperative has become (Schneider 1982).

The responsibilities and legal obligations of cooperative presidents are far too great to have people serving who do not understand the full scope of their responsibilities. The cooperative president should possess

a management style, possess motives and ambitions compatible with the constraints of a member-user-owned, democratically controlled organization.

The abilities of good management are not personal characteristics, but broad performance competencies which can be developed through specific training and education programs (Mentkowski 1982, Boyatzis, 1982, Hutchinson, 1969). Educating for the development of such competencies is needed. Therefore, training programs are in constant need of development, refinement and evaluation. Training programs should be designed with appropriate objectives based on a global view of what presidents of cooperatives should know to meet the demands of their administrative work.

The highest priority competencies which will enable the cooperative president to administer effectively must be determined in order to establish criteria for the training of cooperative presidents. Therefore, a study concerning priority ranking competencies which cooperative presidents must have is essential.

PURPOSE OF THE STUDY

The purpose of this study was to delineate essential competencies that could serve as valuable information when designing training programs for Cooperative presidents.

The objective of the study was to determine the highest

priority competencies for agricultural cooperatives' presidents as perceived by people currently in administrative positions in cooperatives.

RESEARCH QUESTIONS

The questions that guided the research process and the related approach to measurement selected for this study were:

- 1- What are the organizational and personal characteristics of the survey population?
- 2- What are the opinions of members of the survey population regarding priority ranking competencies for agricultural cooperative presidents?
- 3- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents?
- 4- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents that can be attributed to organizational characteristics (commodity of the cooperative, number of employees, and membership size)?
- 5- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents that can be attributed to administrators' personal characteristics (level of schooling, years of experience, number of training programs attended)?
- 6- What are the organizational and personal characteristics of the nominated outstanding presidents?
- 7- Are there significant differences between the average and outstanding presidents regarding priority ranking competencies for cooperative presidents?
- 8- What are the most important duties and

responsibilities of a cooperative president as perceived by the respondents?

IMPORTANCE OF THE STUDY

This study provides useful information for determining the highest priority competencies as perceived by key people in the administration of cooperatives.

The priority competencies identified should serve as a basis for the establishment of training programs directed toward improving the overall abilities of a cooperative president. This study stimulates:

- the enforcement of the value of certain competencies in aiding cooperative presidents to fulfill successfully the administrative functions;
- the improvement in administrative training for cooperative presidents by applying the competencies that should be the focus of an administrative educational program.

DEFINITION OF TERMS

<u>Administration/Management</u> - refers to the activities of planning, organizing, controlling, motivating and coordinating the cooperative in its day-to-day operations.

<u>Agricultural Cooperatives</u> - embraces only cooperatives associated with agriculture, livestock, and dairy, and excludes cooperatives that fall under the category of fisheries and forestry.

<u>Competencies</u> - defined as those professional and personal characteristics which will enable the cooperative president to perform a quality job.

<u>Cooperative Administrators</u> - refers to the executive members of the Administrative Board of Directors.

<u>Coffee</u>, <u>Sugar Cane and Dairy Cooperatives</u> - production

and marketing cooperatives whose main product is that from which they take their name.

<u>Crops/Livestock Cooperatives</u> - production and marketing cooperatives that deal with plant and animal production.

<u>Mixed Cooperatives</u> - cooperatives dealing with more than one product on the same basis.

"Other" Cooperatives - refers to cooperatives federation, central and cooperatives dealing with a single product but with no significant number of organizations to agglomerate them in a separate group.

<u>Organizational Characteristics</u> - refer to the type of commodity with which the cooperative deals, number of employees, and membership size.

<u>Personal Characteristics</u> - include the administrator's level of schooling, years of experience, and number of administrative training sessions attended.

<u>Training Program</u> - a practical training experience designed to develop a particular skill or group of skills.

LIMITATIONS OF THE STUDY

This study has the following limitations:

- This study was concerned only with cooperatives in the State of São Paulo, Brazil, taking into account that the structure of Brazilian rural production is very diversified in various regions of the country. An authentic generalization of the results of this study to the rest of the country would be difficult. Furthermore, the cooperative movement in the State of São Paulo has always been more expressive than in other regions of Brazil.
- . The outstanding presidents identified in this study were limited to the opinions of the administrators surveyed and to the presidents responding to the questionnaire survey.

ASSUMPTION

A basic assumption of this study is that the responses from members of the sample population reflect their true opinions and that respondents completed the survey with relative honesty and accuracy.

OVERVIEW OF THE RESEARCH DESIGN

The design chosen for this study was a mailed questionnaire survey. The data obtained from the questionnaire were used to:

- . Determine the organizational and personal characteristics of the survey population.
- . Determine what the highest priority competencies are for a cooperative president as viewed by people in administrative positions in an agricultural cooperative.
- . Determine if cooperative organizational or administrators' personal characteristics influence their perceptions of priority ranking competencies for agricultural cooperative presidents.
- . Determine the organizational and personal characteristics of the outstanding presidents who were nominated.
- . Determine if the selected outstanding presidents perceived the same as the average presidents on priority ranking competencies for an agricultural cooperative president.
- . Determine what the most important duties and responsibilities are of a cooperative president as described by the respondents in an open-ended research question.

A three-part self-administered mailed questionnaire was developed for the collection of data. The questionnaire

items were reviewed by a panel of judges and tested for validity prior to mailing to the research population. Reliability testing was done in the form of test-retest procedures. Chapter III presents additional detailed information on the methodology design.

The data collected, both numeric response and written comments, were transformed for microcomputer entry and analysis using the SPSS-PC, Version 2.0 (Statistical Package for the Social Sciences). Various statistical tests were performed on the quantitative data to provide information related to answering the research questions. Chapter IV provides a detailed reporting of the research results.

A summary of the study, conclusions, limitations, and recommendations for further research are presented in Chapter V.

CHAPTER II

REVIEW OF LITERATURE

In order to have a set of competencies be priority ranked by cooperative administrators, this study first identified some important competencies of a cooperative president. The identification of competencies for this this study emerged primarily from a review of literature in the fields of Cooperative Management, Business Management, Managerial Competencies, as well as from a validation of a jury of experts which is described in Chapter IV. The intent of this procedure was to understand better the management functions of agricultural cooperatives, to get acquainted with existing business management knowledge and practices, and to identify certain competencies for cooperative presidents in order to respond to the research problem.

COOPERATIVE MANAGEMENT

A cooperative is an organization formed by a group of people with common interests who have joined together for the purpose of providing service as a means of economic, social, and cultural improvement for themselves and the community in which they live.

Cooperative principles are fundamental to the business activities of cooperatives. Democratic control, one member - one vote, limited interest on invested capital, dividends paid according to patronage, and service at cost for members are some of the important principles that are unique to cooperatives.

Another characteristic feature of cooperatives is that their members are at the same time the owners and direct beneficiaries of the organization. As owners of the cooperatives, the farmers-members are jointly responsible for their control and management.

All the factors mentioned above contribute to the internal organizational environment. That environment transmits the expectations of the members toward the direction of the business, and consequently, determines the outcomes the cooperative president is expected to produce.

The president's job overall is to create within the organization an environment that facilitates the accomplishment of its objectives. A useful method of classifying managerial functions is to group them around the activities of planning, organizing, controlling, motivating, and coordinating.

Following is a brief discussion of each of these functions considering the importance of understanding each function as a necessary part of the total management process.

Planning involves the thinking, judging, and decision-making function of management. The planning process will involve determining the goals and plans for the organization and communicating them to others, suggesting and thinking through organization' policies, stipulating rules for management succession; and adopting procedures required to handle products.

Organizing involves the establishment of an institutional structure of roles through a delineation and enumeration of the activities required to achieve the goals of the enterprise by each part of it. Organizing involves the grouping of activities and the structural arrangement of persons, facilities, and equipment.

Controlling evaluates the results being achieved to ensure that plans of action are being carried out as intended. Controlling involves monitoring the performance of employees and the business as a whole providing feedback on employees' performances, predicting trends and forecasting results.

Motivating is the responsibility of management to encourage the members to participate in cooperative issues, build commitment, identity and pride. Employees and members must have confidence in those who guide them, feel that they are members of the team, and know their responsibilities, obligations, and benefits so they can

feel a sense of accomplishment when the cooperative succeeds.

Coordinating means integrating activities, people, facilities, and equipment to achieve a satisfactory, unified operation. It is the work of reconciling differences in approach, timing, effort, or interest and harmonizing cooperative and individual goals.

BUSINESS MANAGEMENT

KATZ'S THREE SKILL APPROACH

Katz 1974 suggests that effective administration rests on three basic personal skills, technical, conceptual and human. This approach is the outgrowth of first-hand observations of executives at work, coupled with studies of current research in the field administration. According to Katz, this approach is based not on what good executives are (innate traits and characteristics) but rather on what they do (skills which they exhibit in carrying out their job effectively). A description of each skill follows:

Technical Skill implies an understanding of, and proficiency in, a specific kind of activity, particularly one involving methods, processes, procedures, or techniques.

<u>Conceptual Skill</u> is the ability to see the enterprise as a whole, including recognizing how the various functions

of the organization depend on one another, and how changes in any part will affect all the others. Conceptual skill refers to ways in which the administrator perceives and responds to the direction in which the business should advance, and coordinates and integrates all the activities and interests of the organization toward a common objective. Conceptual skill is the ability to translate knowledge into action.

Human Skill is the executive's ability to work effectively as a group member and to build cooperative effort within the team he/she leads. To achieve the goals of the organization a coordination of people is essential. This coordination may involve motivating cooperative members and employees, organizing the cooperative human resources, managing conflicts, and stimulating a degree of pride in the organization.

MANAGERIAL COMPETENCIES

Defining Competencies

Certain characteristics or abilities enable a person to demonstrate appropriate specific actions in a job. These characteristics or abilities can be called competencies.

Klemp noted:

Competence has been taken to mean knowing how to perform or possessing the aptitude for performance, rather than demonstrating that knowledge or aptitude: Knowing has been

distinguished from doing. (Klemp 1979, 42)

Klemp 1980 defines job competency as an underlying characteristic of a person which results in effective and/or superior performance in a job. An underlying characteristic, in a sense, may be a knowledge, skill, trait, self-scheme, or motive which a person may possess. Klemp wrote:

A competency, or component or overall competence, is a characteristic of an individual that underlies effective work performance. A competency can be any human quality: It can be knowledge, a category of usable information organized around a specific content area (for example, knowledge of mathematics); it can be a skill, the ability to demonstrate a set of behaviors or processes related to a performance goal (for example, logical thinking); it can be a trait, a consistent way of responding to an equivalent set of stimuli (for example, initiative); it can be a self-scheme, a person's image of self and his or her evaluation of that image (for example, self-image as a professional); or it can be a motive, a recurrent concern for a goal state or condition which drives, selects, and directs behavior of the individual (for example, the need for efficacy). A person may possess many of these characteristics, but by our definition, if the knowledge, skill, trait, self-scheme, or motive is not explicit related to effective performance, it is not a competency. (Klemp 1980, 4)

Other authors define competence as developmental, holistic and generic. Mentkowski et. al. noted:

A competence to be <u>developmental</u> means that it is teachable. Thus, competencies are broken open into sequential descriptions or pedagogical levels that describe increasingly complex elements which students acquire over time as the result of instruction. A competency to be <u>holistic</u> means that it involves the whole person including a behavioral component, a knowledge component, an affective or self-perception component, as well as a motivation component. And a competency to be

generic means that the developing holistic ability
will transfer across situations and settings in
work, but also the personal and professional
situations. (Mentkowski et. al. 1982, 8)

Approaches to Identifying Competencies

The domain of behaviors important to competent performance in the job can be viewed from several different angles. Some approaches focus on the theoretical aspects of the job, whereas others focus on the more practical aspects. Boyatziz has three different views about competence:

If you are part of the scientific management tradition, you may view competencies as the specifications for the human machinery desired to provide maximum organizational efficiency and effectiveness. If you are part of the humanistic management tradition, you may view competencies as the key that unlocks the door to individuals in realizing their maximum potential, developing ethical organizational systems, and providing maximum growth opportunities for personnel. are one of the people who studies, thinks about, and tries to help organizations utilize their human resources effectively, the findings and model should provide a needed relief from the eclectic cynicism or parochial optimism concerning management that many of us have developed. (Boyatziz 1982, 258)

The most common approaches to determine competencies are described below:

The Panel Method

One of the methods utilized for the identification of competencies is the Panel Method, comprised of a group of people, usually experts, who generate a model through discussion of what is needed to perform a job competently.

Primoff 1973, in using a panel of experts for identifying the elements of a job, found this a fair method since it is developed by people who have a thorough knowledge of the job. However, this technique can be severely limited by biased individual values and beliefs about the important dimensions of the job. These bias can invalidate the study.

The Systematic Observation Method

Another approach for determining competencies may come from Systematic Observation. Such studies represent an attempt to systematically determine those competencies which effective people possess. Campbell et al.

in a review of research on managerial behavior stated:

By sampling broadly and by gathering many behavioral incidents about managerial jobs, an investigator can be assured of discovering important time, person, or situation-determined changes that may be crucial to a full understanding of the job being studied. (Campbell et al. 1970, 80)

The Task and Function Analysis Method

Another approach for determining competencies comes from The Task and Function Analysis (Albracht 1966; Gardner 1964; Davies 1973). This is one of the more explicitly detailed methods of determining competencies. The basic method is to identify a job; the functions and activities of the job then become the focal point for identifying the competencies needed by the individuals who are expected to

perform them (Clark and Meaders 1968).

This method has been criticized as yielding lists of only minimum knowledge and skills requirements. Pottinger stated that:

These lists neglect many significant areas of job competence because they address only external, observable behaviors without consideration of intrapersonal and environmental variables that influence behavior. (Pottinger 1979, 27)

Such a judgement based approach may yield reliably observable outcomes, but it provides no insight into the skills and abilities that cause these outcomes (Huff 1980). Boyatziz stated that:

Models based on task or function analysis focus on the job and do not address the person in the job. In doing so, the models include many specific and detailed descriptions of activities, but no mention is made of the characteristics that enable or increase the likelihood of a person performing those activities. (Boyatziz 1982, 8)

The Behavioral Events Analysis Method

Another approach for determining competencies is The Behavioral Events Analysis (McClelland 1975). This method uses a structured interview technique in which the respondents are asked to describe three incidents in which they felt effective in the job and three incidents in which they felt ineffective in the job. The responses then are recorded and analyzed by professionals experienced in this technique to determine how more effective and less effective workers perform their work differently. A

distinguishing characteristic of this procedure is that the interviewees are initially chosen by nomination based upon job performance -- those who had demonstrated superior performance and those who had demonstrated average performance. This approach has been used with success, but it is costly, time-consuming and requires trained professionals to analyze the responses.

The Job Competence Assessment Method

Other methods of determining competencies use an integration of various approaches. The Job Competence Assessment developed by McBer and Company, a behavioral research firm, is one of these. According to Boyatziz 1982, the Job Competence Assessment uses five steps to generate a validated model for a job.

The first step involves determining the appropriate measure of job performance and how it is to be assessed. The second step involves job element analysis and the third step involves the Behavioral Event Interviewing, mentioned above, where distinguishing characteristics are identified, coded, and categorized. In the fourth step these characteristics are compared with the job elements to determine the distinguishing characteristics of the superior performers. And the last step involves integration of the results of steps two through four.

This method has developed a list of managerial

behaviors which are characteristic of superior performance.

McBer's study of 2000 managers in a variety of jobs and
organizations delineated twenty-one generic competencies -the Management Competency Model.

The Management Competency Model

The Job Competence Assessment which generated the Management Competency Model was designed to identify competencies that are not only related to effective performance but that cause effective performance. This method generated a list of competencies that have been shown to relate to effectiveness regardless of the specific job and the organization. According to Boyatziz the list was integrated with two criteria in mind:

(1) the competencies had distinguished effective performance in a job with statistical significance; and (2) the competencies were not unique to the specific product or service that the organization provided (Boyatzis 1982, 26).

The uniqueness of this model is that the competencies are generic and, thus, apply to managers in very diverse settings. They are holistic and, thus, the competencies are applied to the individual manager in his or her real world situation. They are developmental and, thus, are behavioral oriented in which the critical issue is not the possession of the competency but its use.

The resulting list included twenty-one types of competencies arranged in six clusters: 1) Goal and Action

Management cluster (Diagnostic Use of Concepts, Efficiency Orientation, Expressed Concern with Impact, and Proactivity); 2) Leadership cluster (Conceptualization, Logical Thought, Self-Confidence, and Use of Oral Presentations); 3) Human Resource Management cluster (Accurate Self-Assessment, Managing Group Process, Positive Regard, and Use of Socialized Power); 4) Directing Subordinates cluster (Developing Others, Spontaneity, and Use of Unilateral Power); 5) Focus on the Others cluster (Concern with Close Relationships, Perceptual Objectivity, Self-Control, and Stamina and Adaptability); and 6) Specialized Knowledge cluster.

An explanation of the competencies of each cluster based on Boyatziz 1982, follows:

Goal and Action Management Cluster (Boyatzis 1982, 60-98)

Diagnostic use of concept is a way of thinking to bring a concept to the situation in an attempt to interpret events through that concept. People with this characteristic usually have a model, theory or framework with which to interpret or explain events. Skills: pattern identification through concept application; deductive reasoning.

<u>Efficiency orientation</u> represents a concern of doing something better. People who possess efficiency orientation set goals that are challenging but realistic; goals that are

within the range of feasible accomplishment but require special efforts. Skills: Goal-setting skills; planning skills; skills in organizing resources efficiently.

Expressed concern with impact represents concern with symbols of power in order to have impact on others. Those people see themselves as important, collect objects of prestige, become officers in organizations to which they belong, and act assertively. They often express concern about the prestige or reputation of the organization. Such people have a need to persuade or influence others. Skills: symbolic influence behavior.

<u>Proactivity</u> represents a disposition toward taking action to accomplish something. Proactive people initiate action, communication, proposals, and meetings. They accept and admit responsibilities for success or failure. Skills: problem solving skills; information seeking skills.

Leadership Cluster (Boyatzis 1982, 99-120)

Conceptualizaton is a thought process in which a person develops a concept that describes a pattern or structure perceived in a set of facts. People with this skill are innovative and creative. They can communicate the meaning of the concept clearly. Skills: pattern identification through concept formation.

Logical Thought represents a thought process in which the person places events in a causal sequence, based on a perception of a series of causes which effect events. That is, the person views certain events as preceding or causing other events, which in turn precede or cause other events. People with this characteristic are orderly and systematic. Skills: excellent organization of thought and activities.

<u>Self-Confidence</u> is the ability to display consistently decisiveness or presence. People with such a characteristic are usually charismatic and have a belief in the likelihood of their own success. Skills: self-presentation skills.

Use of oral presentation is a competency by which people make effective verbal presentations, whether these presentations be in one-on-one meetings or an address to an audience of many. Skills: verbal presentation skills.

Human Resource Management Cluster (Boyatzis 1982, 121-41)

Accurate self-assessment is a competency by which people have a realistic view of themselves. These people see their strengths and weaknesses and know their limitations. Skills: self-assessment skills.

Managing group process is an ability to stimulate others to work together effectively in group settings. People with this competency communicate to a group the need for collaboration and cooperation. They create symbols of group identity, pride, and trust which represent the team effort. Skill: instrumental affiliative behavior; group process skills.

Positive regard is believing in others. These people have a basic belief that people are good, and they see themselves as good. Skills: verbal and non-verbal skills which result in people feeling valued.

<u>Use of socialized power</u> is a competency by which the person uses forms of influence to build alliances, networks, coalitions, or teams. Skills: alliance producing skills.

Directing Subordinates Cluster (Boyatzis 1982, 142-58)

Development of others is a competency with which people demonstrate feedback skills in facilitating self-development of others with the intent of stimulating improved performance. Skills: feedback skills to facilitate self-development.

<u>Spontaneity</u> is a competency with which people can easily express any thoughts, feelings, or opinions. Skills: self-

expression skills.

Use of unilateral power is an ability to stimulate subordinates or others to go along with directions, wishes, commands, policies, or procedures. People with this competency give orders, commands, or directions based on personal authority, positional authority, or the policies of the organization without necessarily soliciting the input of others, even in situations in which input has been solicited previously. Skills: compliance producing skills.

Focus on Others Cluster (Boyatzis 1982, 159-82)

Concern with close relationship is a competency by which people care about and build close relationships with individuals. These people demonstrate nonverbal skills that cause people to feel cared for. They spend time talking with subordinates and co-workers when there is no particular task requirement. Skills: nonverbal skills that result in people feeling cared for; friendship building skills.

Perceptual objectivity is a competency which allows people to be relatively objective and not limited in view by excessive subjectivity or personal biases, prejudices, or perspectives. These people have the ability to remove themselves from emotional involvement and view the situation with relative objectivity. Skills: effective distancing

skills

<u>Self - control</u> is a competency exhibited by people who inhibit personal needs for the sake of organizational goals. People with self-control, when verbally attacked by someone, do not necessarily react with corresponding anger or defensiveness. Skills: self control skills.

Stamina and adaptability is an ability people have to sustain long hours of work and be flexible to adapt to changes in life and the organizational environment. Skills: adaptation skills; coping skills.

Specialized Knowledge Cluster (Boyatzis 1982, 183-90)

A model of performance in any job must include specialized knowledge such as facts, principles, theories, frameworks, or models. In assessing competence, the possession of information related to the work should be practical and usable, otherwise it will not be related to performance.

IDENTIFICATION OF COMPETENCIES FOR THIS STUDY

In identifying the competencies necessary to perform

effectively as president of a cooperative, multiple sources

of the literature review were used. The first step was to

study the managerial functions of planning, organizing,

controlling, motivating, and coordinating and through the

Task and Function Analysis Method to identify the basic competencies related to these functions. Taking into account that the literature indicated that this latter method may identify abilities critical for effective performance, but may not necessarily identify the personal abilities which are related to effective performance, further work was done. The second step was to find the elements thought to be most important for management that stem from ideas about management behaviors which screen judgments of effective performance through values and attitudes. To serve this purpose, the Management Competency Model (Boyatziz 1982) was used. Furthermore, the Katz Three Skill Approach was used to assure the inclusion of technical, human and conceptual competencies.

Competencies were also generated from lists of characteristics cited in a study conducted by Mentkowski et al. 1982 rating managers' characteristics. A study done by Volkin et al. 1960 on directors of farmer cooperatives was also used as a source of competencies. Competencies were also generated from the pre-test distributed to six experts in agricultural cooperatives in Brazil.

After the final list of competencies was generated, the competency statements were classified into nine clusters: Foundation of Cooperatives, Overall Knowledge, Cooperative Administration, Decision Making, Human Resource Management, Membership Relations, Vision, Communication, and Leadership.

Each of these clusters were composed of five competencystatements, with a total of forty-five competency-statements composing the first part of the survey questionnaire.

Figure 1 explains the relationship between the theoretical basis for identifying competencies and competency clusters.

SUMMARY

This chapter has attempted to provide some empirical substantiation to the identification of important competencies of persons who are currently presidents of cooperatives.

Cooperative management was studied by grouping the managerial functions around the activities of planning, organizing, controlling, motivating, and coordinating. The Katz Three Skill Approach was examined which suggests that effective administration rests on three basic skills described as technical, conceptual, and human. The next section was devoted to defining competencies and discussing approaches to identifying those competencies. Understanding the concept of competencies was a prerequisite to understanding the remainder of the study and the outcome of the research. Finally, the approach chosen to be used in this study to identify the competencies necessary to perform effective work as a cooperative president was discussed.

CHAPTER III

METHODS AND PROCEDURES

The objective of this study was to determine the highest priority competencies for agricultural cooperatives' presidents as perceived by people currently in administrative positions in cooperative. This section describes and explains the procedures used to obtain information for this study. It identifies the approach to measurement, research population, process for instrument development, validity and reliability tests, distribution and collection of the questionnaire, response rate, and data analysis.

APPROACH TO MEASUREMENT

The questions that guided the research process and the related approach to measurement selected for this study were:

- 1- What are the organizational and personal characteristics of the survey population?
- 2- What are the opinions of members of the survey population regarding priority ranking competencies for agricultural cooperative presidents?
- 3- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents?

- 4- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents that can be attributed to organizational characteristics (commodity of the cooperative, number of employees, and membership size)?
- 5- Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents that can be attributed to administrators' personal characteristics (level of schooling, years of experience, number of training programs attended)?
- 6- What are the organizational and personal characteristics of the nominated outstanding presidents?
- 7- Are there significant differences between the average and outstanding presidents regarding priority ranking competencies for cooperative presidents?
- 8- What are the most important duties and responsibilities of a cooperative president as perceived by the respondents?

RESEARCH POPULATION

The survey population of this study consisted of presidents and members of the Board of Directors of agricultural cooperatives in the State of São Paulo, Brazil. A total of 152 cooperatives of the 156 active agricultural cooperatives in the State of São Paulo were surveyed (97.4 percent). The persons contacted represent a systematic sample with a random start. For each name drawn first from the list of cooperatives, the president was contacted; for each name drawn second one member of the Board of Directors was contacted. In this manner the study would determine the

competencies that presidents themselves perceive as important to fulfill the responsibilities of their positions, as well as the competencies that other members of the Board of Directors perceived as important. However, due to the fact that the great majority of the respondents were presidents (89.7 percent), for the purpose of analysis the presidents' and directors' opinions were combined into responses of administrators as a whole.

THE PROCESS FOR INSTRUMENT DEVELOPMENT

The method which was used to gain insight into the management of a cooperative was to survey those who were knowledgeable about the occupation. To accomplish this, a survey instrument was used to priority rank the competencies of an agricultural cooperative president. The design chosen for this study was a mailed questionnaire survey.

Several factors were considered in reaching the decision to conduct a mailed questionnaire survey rather than any other form of data collection such as personal interview or telephone. The first factor was the great distance between locations of cooperatives since limited financial resources were available. A second consideration was that a precedent study had been conducted by Mentkowski et al. (1982) on a similar topic. A set of questionnaire items was available from Mentkowski's 1982 study that

provided a beginning for developing an instrument. A third consideration was that a written questionnaire could provide the most data in a set amount of time (estimated between fifteen to twenty minutes).

Considering that this was a cross-cultural research, special attention was given to the translation process in order to assure the retention of the original meaning of the questions. The following steps were taken in the translation process to assure the conceptual equivalence of the questionnaire:

- 1. The questionnaire was first designed in English
- 2. It was then translated into Portuguese for pre-testing
- 3. The Portuguese version was adapted according to validators' suggestions for completion by the sample population
- 4. The Portuguese version was translated back into English.

Careful attention was given during the translation process from Portuguese to English to the following:

- a. Words that had a dual meaning. For example, in Portuguese there is a parallel distinction in the verbs "conhecer" and "saber", while in English the single verb "to know" is used for both of the senses. For translation purposes the terms "know" (conhecer) and "know how" (saber) were used.
- b. Verbs in which the meaning of "know how" was implicit in the verb itself were translated literally.
 - c. Words dealing with "knowledge". As Schutz 1962

defined: "Knowledge has manifold degrees of clarity, distinctness, precision, and familiarity". This study used the term "knowledge about" based on James 1950 where it goes to great lengths to spell out the difference between "knowledge of acquaintance" and "knowledge about". James wrote:

We can ascend to knowledge about it by rallying our wits and proceeding to notice and analyze and think. What we are only acquainted with is only present to our minds; we have it, or the idea of it. But when we know about it, we do more than merely have it; we see, as we think over its relations to subject it to a sort of treatment and to operate upon it with our thought (James 1950, 222).

Following is the rationale of the three parts of the questionnaire.

Rationale of Questionnaire Part I

Part I of the questionnaire consists of forty-five competency statements arranged in nine clusters, categorized under the headings of Foundation of Cooperatives, Overall Knowledge, Cooperative Administration, Decision Making, Human Resource Management, Membership Relations, Vision, Communication, and Leadership.

The procedure to classify competencies into clusters is explained as follows:

- 1. Each competency was analyzed individually;
- 2. Related competencies were identified;
- 3. Competencies not directly related to each other were analyzed based on the inferable aspects of the

competency, or based on the context of the situation in which the competency would occur;

4. Competencies were classified into clusters.

The instructions on the research survey asked the respondents to consider each competence in the context of their own job, and then to priority rank them utilizing a scale of zero through five. If the competency statement was perceived not to be important, an option was given to use zero. A value of one was used to describe a competency statement that had the highest priority of the cluster, and a value of five was assigned to a competency statement that had the lowest priority of the cluster. At the end of the inventory there was space for the respondents to write additional statements they felt were omitted.

An explanation of each cluster is presented below:

Cluster #1 - Foundation of Cooperatives

This cluster corresponded to the concept of cooperatives. Knowledge of cooperatives and belief in their principles are a solid qualification for a cooperative president. Cooperative philosophy and principles are fundamental in the operation of the cooperative association; they determine the framework of cooperative activities. The cooperative president may be faced with situations that require him or her to stand up and fight for the principles

he/she believes in in order to strengthen the collective voice of agricultural interests in state and national affairs. To perform these aspects of the job, five competencies were identified:

- . Know and apply the cooperative philosophy
- . Have cooperative spirit
- . Have knowledge about current cooperative legislation
- . Have knowledge about the cooperative way of doing business
- . Know how to defend cooperative interests before governmental institutions

Cluster # 2 - Overall Knowledge

This cluster dealt with the overall knowledge the president must have in deciding the course of the business. The president's job often involves situations that require a general knowledge of agriculture, marketing, social matters, and business methods and problems. Five competencies that corresponded to this cluster were:

- . Have knowledge about agriculture
- . Have experience in other management positions
- . Have knowledge about marketing channels
- . Have knowledge about cooperative administrative, financial, and operational structure
- . Have knowledge about the social, economic, and political environment in which the cooperative operates

Cluster # 3 - Cooperative Administration

The responsibility and accountability of the cooperative ultimately rests in the hands of its president who is responsible for establishing goals and plans of actions according to cooperative principles and philosophy. This cluster of competencies referred to ways in which the president perceives and responds to the direction in which the business should advance; it involved the thinking, judging, and decision-making functions toward a common objective. Five competencies that corresponded to this cluster were:

- . Know how to administer the cooperative as a business and social operation
- . Know how to manage the cooperative in a participative and democratic structure
- . Know how to formulate policies consistent with the objectives of the cooperative
- . Know how to identify alternatives in solving problems
- . Know how to assure that the bylaws and regulations of the association are observed by members and employees

Cluster # 4 - Decision Making

A cooperative president is the decision maker of the cooperative organization. The person in such a position

should have the ability to consistently display decisiveness and presence. Some circumstances will require that a president not become emotionally involved and be able to view a situation with relative objectivity. Five competencies that enable the president to respond to these responsibilities of the job were:

- . Have initiative and decision making abilities.
- . Be aware of his authority and responsibilities in legal and social matters
- . Know how to make decisions under conditions of risk
- . Know how to withstand pressure and remain calm in crisis situations
- . Know how to deal with conflict directly and tactfully

Cluster # 5 - Human Resource Management

Cooperative management must work closely with employees and members. To achieve the goals of the cooperative, a coordination of these two groups of people is essential. The coordination may involve appropriate delegation of authority, knowledge of people's needs, grouping of activities and the structural arrangement of persons, facilities and equipment as well as the evaluation of performance to ensure that plans of action are being carried out as intended. Five competencies that corresponded to this cluster were:

- . Know how to delegate authority appropriately
- . Know how to understand and respond to members and employees' needs within the limits of bylaws and regulations
- . Know how to coordinate people, activities, and facilities
- . Know how to ensure employees' good performance
- . Know how to evaluate performance of employees and the cooperative as a whole

Cluster #6 - Membership Relations

Cooperative members are the users and the owners of the organization and, as such, have responsibilities and obligations. Protecting the interests of the members, instilling a feeling of group responsibility, communicating to the members the need for collaboration and cooperation, and creating symbols of group identity, pride, and trust will facilitate the accomplishment of cooperative objectives and stimulate members' interest, involvement, and commitment. To perform these aspects of the job, five competencies were identified:

- . Assure that the members are the main goal of the organization
- . Keep members informed about policies and operating practices
- . Instill in members their responsibility for making

the cooperative successful

- . Motivate members to participate in cooperative issues
- . Keep channels of communication open among directors, members, and employees

Cluster # 7 - Vision

The performance of the president is enhanced by his/her vision of the possibilities for the cooperative. Therefore, the better the president understands his/her job, the better opportunities for development he/she will offer to employees and members. The cooperative president should take advantage of every opportunity to instill enthusiasm, aspiration, and understanding in the members, employees, and the community in which the cooperative serves. Five competencies that would help the president perform these aspects of the job were:

- . Promote the educational development of employees and members
- . Display a progressive attitude for the development and expansion of the cooperative
- . Keep up-to-date with the economic and social cooperative system
- . Act as a model influencing positive behaviors of employees and members
- . Know how to guide directors, employees and members in a clear and complete way

Cluster # 8 - Communication

A cooperative president in order to represent well the interests and needs of the farmers, should have the ability to work and get along with people, transmit a sense of trust, and reflect the ability to cooperate and work well as a team. He/she should have the ability to make effective verbal presentations, whether these presentations be in one-on-one meetings, or an address to an audience of many people. Competencies that represented this cluster were:

- . Know how to deal with people
- . Know how to communicate clearly
- . Know how to direct meetings
- . Know how to listen critically
- . Know how to instill trust

Cluster #9 - Leadership

The cooperative's performance depends largely on the leadership of the president to motivate members and employees and to organize the human resources of the cooperative in order to achieve its desired goals. The president should have a good reputation and the highest integrity. To perform these aspects of the job, five competencies were identified:

- . Have common sense
- . Have leadership abilities
- . Know how to influence

- . Have a high capacity to work
- . Be honest, of good character and good reputation.

Rationale of Questionnaire Part II:

Part II was designed to get information about the respondents' backgrounds and the cooperatives they were representing. This part of the questionnaire survey consisted of seven questions which attempted to measure several variables. They were:

Position:

The question asked what position the respondent holds in the cooperative. As mentioned earlier in this study, cooperatives in the State of São Paulo usually have one president and two directors (financial and administrative). This question was designed to determine if the title and responsibilities of the position a person holds influence the perception of effective performance. However, this question was not used in the statistical analysis because the great majority of the respondents (89.2 percent) were cooperative presidents. Therefore, for statistical analysis purposes the research population was treated as just one group called cooperative administrators.

Cooperatives' Commodities

This variable was intended to be used to ascertain if the type of product with which the cooperative deals influences the perception of priority ranking competencies for cooperative presidents.

Cooperatives' Number of Employees

This questionnaire was also designed to collect information about the size of the organization based on the number of employees working for it. Size and complexity of the business may influence the degree and amount of managerial responsibilities.

This study took into account that an administrator holding a highly positioned management role in a small organization may not have the same responsibilities as the same position in a larger organization. Therefore, his or her perceptions of a quality managerial role may differ.

Cooperatives' Membership

Size of membership is generally a measure of strength of the organization as far as bargaining for prices and credit is concerned. This question was intended to determine if membership size affects the administrators' perception of important competencies.

Administrator's Level of Schooling

The questionnaire asked administrators to indicate the highest level of schooling attained. When a technical school or university was attended, the field in which the degree was earned was requested. This question was designed to determine if years of formal education influence the perception of prioritizing competencies for a cooperative president.

Administrator's Years of Experience

Another variable included in the questionnaire survey was how many years of experience the respondent had in order to find out to what extent experience affects the perception of priority ranking competencies.

Administrator's Training Programs Attended

The respondents were asked if they had ever attended a management training program and, if so, how many. These questions were expected to serve as an indicator of the administrators' and the organizations they were representing, commitment for educational advancement.

Rationale of Questionnaire Part III:

This part of the questionnaire was designed to ascertain the opinions of the respondents concerning the most important responsibilities and duties of the

president's job. Also, it was important to determine if level of performance (outstanding or average) of the cooperative president affects his/her perception of priority ranked competencies.

Through a peer nomination procedure (Kane and Lawler 1978; Mentkowski et al. 1980), the administrators were asked to nominate those cooperative presidents whom they considered "outstanding". In this sense, "outstanding" was defined by the persons who were in the best position to observe the behavioral performance of their colleagues and who could identify those presidents who stood out as particularly effective. Kane and Lawler have reported that the peer nomination method appears to have the highest validity and reliability among other peer assessment methods, such as peer rating and peer ranking.

Space was allotted on the questionnaire for participants to list the names of five cooperative presidents they felt were doing an outstanding job. The answers of the presidents who were nominated most frequently could then be studied to determine which competencies they cited.

VALIDITY TEST

Once a set of competencies had been identified, those competencies were validated to determine if they were, indeed, essential to effective performance. Prior to

mailing to the sample population, the research questionnaire was pre-tested by a panel of six judges directly involved with cooperative administration in Brazil to test the content validity of the instrument. Those contacted in the pre-test were not included in the final questionnaire survey. Judges were asked to add competencies which they felt were omitted and to make comments and suggestions. Results of such pre-tests were then used to rank order the original competency listing, add competencies, and sort out those competencies not deemed essential.

To guide the evaluation process, each judge was presented with the following questions; they were then asked their general comments about the questionnaire.

- 1. Which words are not easily understood?
- 2. Does the questionnaire create a positive impression -one that motivates people to answer it?
- 3. Which questions elicit uninterpretable answers? Why?
- 4. Which aspects of the questionnaire suggest bias on the part of the researcher?
- 5. General comments about the questionnaire.

RELIABILITY TEST

The reliability of a measure is simply its consistency.

Babbie identifies reliability as:

The quality of a measurement method that suggests that the same data would have been collected each time in

repeated observations of the same phenomenon. (Babbie 1986, 558)

In order to determine its reliability, the questionnaire was given a pilot test on six administrators of cooperatives and after two weeks was retested on the same group. Those contacted in the reliability test were not the same contacted for the validation of the research instrument, nor included in the final questionnaire survey.

A Spearman Non-parametric Correlation was used in order to determine the internal consistency of the study. A value of 0.57 was obtained indicating a moderate correlation between the test and retest procedures and thus all the competency statements were included in the final analysis.

DISTRIBUTION AND COLLECTION OF THE OUESTIONNAIRE

A mailed questionnaire survey was sent during January to March 1990 to 152 agricultural cooperatives of the 156 cooperatives (97.4 percent) listed with the Organization of Cooperatives for the State of São Paulo (OCESP). The difference of four associations was accounted for by changes of address or difficulties in obtaining the correct address.

The questionnaire was printed in a booklet format that consisted of two high quality 8½" x 14" sheets of paper folded in the middle and stapled. On the front cover a map of the State of São Paulo with all the locations of the cooperatives was printed to create a positive first impression. Above the map in capital letters was written

"COMPETENCIES FOR COOPERATIVE PRESIDENTS" so the respondents would have an idea of the subject of the questionnaire.

Under the map was a brief statement about the objectives of the study (See Appendix A for copy of the questionnaire).

An identification number was stamped individually on the last page of each questionnaire. In the cover letter respondents were assured of the confidentiality of their responses.

The questionnaire was accompanied by a personalized cover letter with the logo of the Agricultural and Extension Education Department, Michigan State University (See Appendix B). The respondents' name, job title, organization name, and address was individually typed and each letter was individually signed by a faculty member of the Agricultural and Extension Education Department and this researcher. This procedure was the same for each follow-up and reminder letter. A letter of endorsement by the National Secretary of Cooperatives, Mr. Adair Mazzotti, under the recommendation of the Ministry of Agriculture, Dr. Iris Rezende, was enclosed with the research questionnaire in order to communicate the relevancy of the study. addition, in order to motivate the members of the sample population to respond to the questionnaire, a stick of a chewing gum was placed in each envelope. All the questionnaires were mailed with a postage-paid return envelope.

A follow-up letter was mailed to each member of the sample population two weeks after the initial mailing. One week later a Telex message was sent to all non-respondents. The following week a reminder packet which included a cover letter, a new questionnaire stamped in the right corner "SECOND REQUEST" in red letters, and another postage-paid return envelope was mailed to those who still had not responded. The deadline for the return of the questionnaire was clearly stated on each cover letter as well as the questionnaire itself. (Some of the sample population called the telephone number printed at the bottom of the cover letter to justify their delay in responding.)

RESPONSE RATE

There were seventy-four questionnaires returned out of the 152 questionnaires mailed to cooperative administrators for approximatelly 49 percent response rate. Those who responded to the questionnaire survey were representative of the cooperative geographic location and the cooperative commodity group, as explained in Chapter IV.

Sixty-six out of seventy-four respondents (89.2 percent) were cooperative presidents, five (6.7 percent) were administrative directors, and three (4 percent) were financial directors. Because of this disparity, for purposes of analysis the opinions of administrators as a whole were considered; presidents' and directors' opinions

were not considered separately.

The low response rate from cooperative directors may be attributed to the terminology used to designate respondents. As mentioned earlier in this study, some cooperative organizations designate the members of the Administrative Board of Directors as president-director, superintendent-director, and administrative-director; or president, vice-president, and secretary; or president, administrative director, and financial director. Consequently, when the president-director received the survey addressed to the director, he responded to the questionnaire rather than passing it on to a director.

From the total of seventy-four questionnaires returned, sixty-seven were statistically usable for the purpose of Part I (44 percent response rate). When analyzing the data of Part I and Part II, the same sixty-seven eligible questionnaires were used, since the responses to both parts are related. Because data from Part III was independent from other parts of the survey, responses from all seventy-four questionnaires were used.

The relatively low return rate overall may be attributed in part to the economic changes made by the newly elected Brazilian government at the time of the mailing of the questionnaire. The new economic plan was introduced in the very beginning of the newly elected Brazilian president's administration, and nobody had expected drastic

changes that soon. At the same time those economic changes occurred, the third mailing was already out and consequently was abruptly interrupted. Although telephone calls were made, only a few questionnaires were returned; the respondents were too occupied in adapting themselves to the new economic plan.

DATA ANALYSIS

The data collected, both numeric responses and written comments from the returned seventy-four questionnaires, were prepared for analysis on a microcomputer using the statistical analysis package SPSS - PC, Version 2.0.

Variables were defined and the form was created for SPSS use in order to guide the transformation of questionnaire responses into numerical data. The written comments were entered for future organization and manipulation of data.

The first part of the analysis consisted of determining the basic distributional characteristics of the data.

Response frequencies, percent, mean, and standard deviation were generated on each competency-statement in Part I and for the respondents' organizational and personal backgrounds in Part II of the questionnaire.

All items from the questionnaire which provided responses on a rank type scale (Part I) were interpreted and analyzed as if they were measured at the ordinal level.

Friedman's Chi-Square statistic test for the analysis of variance was utilized in Part I of the questionnaire where the data were in the form of ranks. Cross-tabulation was performed on pairs of questionnaire items in Part II that were measured on the nominal and ordinal level. Statistical t-Tests were utilized to compute probability level for testing whether or not the difference between two sample means was significant. One-Way Analysis of Variance (ANOVA) tests were utilized to compute F ratios in order to determine whether significant differences existed between the main groups. The 0.05 level of significance with an accompanying 95 percent confidence level was used in assessing results of this study.

Data Analysis of Outstanding Presidents

The questionnaire survey asked the respondents to nominate five cooperative presidents whom they considered outstanding and to place the names in rank order, the most outstanding first. Of the seventy-four respondents, forty-two (57 percent) nominated outstanding presidents; twenty-one (50 percent) nominated five names; five (12 percent) nominated four names; six (14 percent) nominated three names; five (12 percent) nominated two names; and five (12 percent) nominated only one outstanding president.

Sixty cooperative presidents were nominated as outstanding presidents at least once. Of the sixty, twenty-

four (40 percent) had responded to the questionnaire survey.

Since the nominations were in rank order the number of points each president received was calculated in order to determine the first names of the list. The basis used to calculate the number of points was: If nominated as the first or the second outstanding president three points were added to his score; if nominated as the third or fourth name, two points were added to his score; and if nominated as the fifth name, one point was added to his score.

Fourteen presidents got at least nine points (Table 3) and were nominated at least three times. Of the fourteen, eight (57.1 percent) had responded to the questionnaire; one was an unusable response. Therefore, seven names were selected to comprise the list of outstanding presidents for further statistical analysis of their perceptions regarding priority ranking competencies for presidents of cooperatives.

Table 3.--Nominated outstanding presidents and number of points computed

Note: If nominated as the first or the second outstanding president three points were added to his score; if nominated as third or fourth name, two points were added to his score; and if nominated as the fifth name, one point was added to his score.

CHAPTER IV

RESEARCH FINDINGS

The objectives of this study were to examine how people in administrative positions in agricultural cooperatives priority rank competencies of presidents of these organizations, and to determine what the differences are between members of the survey population regarding priority ranking competencies that can be attributed to organizational differences (cooperatives' commodities, number of employees, and membership) or personal differences (administrators' level of schooling, years of experience, and participation in training programs). Also this study was designed to ascertain the differences between the perceptions of the average and the nominated outstanding presidents on priority ranking of the competencies of the cooperative president.

The findings in this chapter are presented and discussed in the following sections:

- . Description of cooperative respondents.
- . Perceptions of cooperative administrators on priority ranking competencies within each of the nine clusters.
- . Perceptions of administrators on priority ranking competencies within each of the nine clusters by cooperative organizational characteristics (commodities, number of employees and membership).

- . Perceptions of administrators on priority ranking competencies within each of the nine clusters by administrator' personal characteristics (educational level, years of experience, training).
- . Description of outstanding presidents.
- . Perceptions of outstanding presidents on priority ranking competencies within the nine clusters
- . Summary of written comments

DESCRIPTION OF RESPONDENTS

The questionnaires which were returned provided information about the following characteristics: cooperatives' geographic locations, cooperatives' organizational characteristics (cooperatives' commodities, number of employees, and membership) and administrators' personal characteristics (administrator's level of schooling, years of experience, and participation in training programs).

Important aspects of these characteristics are discussed in this Chapter.

Cooperatives' Locations

The locations of the cooperatives surveyed and the locations of the cooperatives responding to the questionnaire are displayed in Figure 2. The State of São Paulo was divided into forty-three micro regions. The geographic micro regions were adopted from <u>Area de Concentração da</u>

Agricultura Brasileira, Ministério da Agricultura, 1970. order to analyze the response rate by the locations of cooperatives, the map was divided into three main regions: North-Northwest-Central corresponding to micro regions 225, 226, 227, 231, 232, 233, 234, 239, 240, 241, 245, 250 251, 252; North-Northeast-Central corresponding to micro regions 228, 229, 230, 235, 236, 237, 238, 242, 243, 244, 246, 247, 254; and South-Southeast-Central corresponding to micro regions 248, 249, 253, 255, 256, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267. Despite the fact that some micro regions had a greater percentage of respondents than others, the overall picture of the map shows that respondents were not unevenly distributed. Table 4 indicates that twenty-eight out of fifty-eight (48.3 percent) questionnaires mailed to cooperatives located in the North-Northwest-Central part of the state were returned, twenty-two out of forty questionnaires (55 percent) mailed to cooperatives located in the North-Northeast-Central part of the state were returned, and twenty-four out of fiftyfour questionnaires (44.4 percent) mailed to cooperatives located in the South-Southeast-Central part of the state were returned. Among the cooperatives answering the research survey 37.8 percent were located in the North-Northwest-Central part of the state 29.7 percent were located in the North-Northeast-Central region and 32.4 percent were located in the South-Southeast-Central sector.

Map of the State of São Paulo and Cooperative Locations:

| South- Southeast-Central | 54 | 35.5 | 24 | 44.4 | 32.4 |
| Total | 152 | 100 | 74 | 48.7 | 100 |

Organizational Characteristics

Cooperatives' Commodities

The cooperatives having a higher response rate were the Mixed cooperatives. They had a response rate of approximately 23.9 percent of the total number of cooperatives responding to the questionnaire, roughly 31.7 percent of Mixed cooperatives participated in the study. Coffee cooperatives' and Dairy cooperatives' response rates were 19.4 percent; 75 percent of all Coffee cooperatives and 59.1 percent of all Dairy cooperatives were participants in this research. Crops/Livestock cooperatives represented approximately 17.9 percent of the total responses and approximately 61.1 percent of all the cooperatives in this category. Sugar Cane cooperatives had a response rate of approximately 14.9 percent of the total number of cooperatives responding and approximately 61.1 percent of all cooperatives in this category. Table 5 illustrates the

number and percentage of response for each commodity group.

Table 5.--Response rate by cooperatives' commodities

| | | % Within | Total % |
|-----------------------|-----|--------------------|--------------------------|
| Cooperative Commodity | No. | Commodity Group | Cooperatives Surveyed |
| Mixed | 16 | 31.7 | 23.88 |
| Coffee | 13 | 75.0 | 19.40 |
| Dairy | 13 | 59.1 | 19.40 |

| Sugar Cane | 10 | 61.1 | 14.93 |
| "Other" | 3 | 36.4 | 4.48 |
| Total | 67 | | 100 |

Cooperatives' Number of Employees

Respondents were asked to classify the cooperatives' number of employees in one of four categories: less than twenty employees, 20-50, 51-100, and more than 100 employees.

Of the cooperatives' respondents, 43.9 percent had more than 100 full-time employees, 21.2 percent had 51-100 employees, 15.2 percent had 20-50 employees, and 19.7 percent had less than 20 employees. Data from crosstabulation, displayed in Table 6, indicated that Coffee and Dairy cooperatives with eight out of the thirteen respondents (61.5 percent) having more than 100 full-time

employees, ranked highest. Mixed cooperatives ranked lowest with two out sixteen respondents (12.5 percent) having more than 100 employees and eight out of the sixteen respondents (50 percent) reporting with less than 20 employees.

Table 6.--Cooperatives' commodities by number of employees

| Commodity | <20 | Number 20-50 | of Employe 51-100 | ees >100 | Row Total |

Note: Number of missing observation = 1

Cooperatives' Membership

Respondents were asked to classify the cooperatives' membership in one of six categories: less than 150 members, 150-299, 300-444, 450-599, 600-750, and more than 750 members.

A total of thirty-six out of the sixty-six cooperatives (54.5 percent) which responded to this question reported having more than 750 members. At the other extreme, twenty-

one out of sixty-six (31.8 percent) reported less than 300 members.

Data from a cross-tabulation analysis of cooperatives' commodities by membership size displayed in Table 7, indicated that eleven out of thirteen Coffee cooperatives' respondents (84.6) had a membership of more than 750 members, followed by the Crops/Livestock cooperatives with eight out of eleven (72.7). Mixed cooperatives presented the smallest membership with nine out of sixteen (56.2 percent) with less than 300 members.

Administrator's Personal Characteristics

Administrator's Level of Schooling

Respondents were asked to classify their educational levels in one of five categories: primary school, middle school, high school, technical school, or university.

Over half (57.8 percent) of the cooperative administrators, i.e. thirty-seven out of the sixty-four responding had university degrees. Just five of the sixty-four (7.8 percent) had a primary level of schooling. The data from the cross-tabulation analysis shown in Table 8 revealed that seven out of the ten Sugar Cane cooperatives (70 percent), nine out of twelve Coffee cooperatives (75 percent), seven out of thirteen Dairy cooperatives (53.8 percent), eight out of eleven Crops/Livestock cooperatives (72.7 percent) had administrators with university degrees. Mixed cooperatives had the lowest number of administrators with university degrees, four out of fifteen (26.6 percent) and the most administrators with middle school education, six out of fifteen (40 percent).

This part of the questionnaire also provided a space for respondents who attended technical school or universities to specify their area of study. The following is a summary of their responses.

From the sixty-four respondents, eight had technical school degrees. Three of them (37.5 percent) had a degree in Accounting; two of them (25 percent) had a technical degree

in Agriculture. Each of the following areas had one person (12.5 percent) with a degree in Motors and Machines, Industrial Mechanics, and primary school Teaching.

Of the respondents, thirty-seven had a university

Table 8.-- Cooperatives'Commodities by administrators level of scholling

Note: Number of missing observations = 3

degree. Among them, four (10.8 percent) had earned two degrees -- all had a degree in Management, one's second degree was in English; the second degree of one was in Law, and two had Engineering degrees as their second.

From the thirty-seven respondents, fifteen (40 percent) had a degree in Law; eight (21.6 percent) had a degree in

Agronomy; six (16.2 percent) had a degree in Management; two (5.4 percent) had a degree in Engineering; two (5.4 percent) had a degree in Medicine; one (2.7 percent) had a degree in Animal Science; one (2.7 percent) had a degree in Economics; one (2.7 percent) had a degree in Veterinary Science, and one (2.7 percent) had a degree in Odontology.

Administrator's Years of Experience

Respondents were asked to classify their years of experience as an administrator of a cooperative in one of four categories: 0-2 years, 3-4 years, 5-10 years, and more than 10 years of experience.

A total of twenty-six of the sixty-six respondents (39.4 percent) who responded to this question had more than 10 years of experience, and eighteen of the sixty-six (27.3 percent) had 5-10 years of experience. Only ten of the sixty-six cooperative administrator respondents (15.2 percent) were identified as new administrators with 0-2 years of experience. Data from cross tabulation shown in Table 9 revealed that the experience of cooperative administrators concentrated in the group of at least 5 years of experience (66.7). Of the ten administrators of Sugar Cane cooperatives, eight (80 percent) had more than 5 years of experience as did nine of the thirteen (69.2 percent) administrators of Coffee and Dairy cooperatives, and seven of the eleven Crops/Livestock (63.6 percent) administrators.

On the other hand, Coffee (23.1 percent), Dairy (7.7 percent), Crops/Livestock (18.2 percent), and Mixed (25 percent) cooperatives were the only ones with administrators with 2 years of experience or less.

Table 9.--Cooperatives' commodities by administrators' years of experience

Note: Number of missing observation = 1

Administrator's Training Programs Attended

Respondents were asked to classify the number of training programs attended in one of four categories: no training received, one, two, and more than two training programs.

More than half (52.3 percent) of the administrators had never attended any training programs, thirteen out of the sixty-five (20 percent) who responded to this question had attended at least one training program, and thirteen out of

sixty-five (20 percent) had attended more than two training programs. Data from the cross-tabulation, displayed in Table 10, provided the information that Dairy cooperatives' administrators had the most training. More specifically, it was shown that eight out of thirteen Dairy cooperative administrators (61.5 percent) had participated in 2 or more training programs, followed by three out of eleven Crops/Livestock cooperative administrators (27.3 percent). The great majority of Sugar Cane cooperatives, nine out of ten (90 percent) had not participated in any training programs. More than one-half of the Coffee cooperatives, seven out of thirteen (53.8 percent), also had received no training, and nine out of fifteen Mixed cooperatives (60 percent) had never participated in a training program.

COOPERATIVE ADMINISTRATORS' PERCEPTION ON PRIORITY RANKING COMPETENCIES WITHIN EACH OF THE NINE CLUSTERS

Upon conducting the Friedman's Analysis of Variance for ranked data (Table 11), the results showed that there were significant differences at the 0.05 level and 95 percent confidence interval in the way respondents priority ranked the competencies in eight of the nine clusters. The Vision cluster was the only cluster with no significant difference in priority ranking competencies.

Table 12 displays the frequency and percentage for each rank category (0,1,2,3,4,5) and the total mean score and standard deviation for the forty-five competency statements within each of the nine clusters. The scale for ranking competencies goes from 0 to 5. For analysis purpose the computer translated the value of 0 (not important) to the value of 6; 1 (highest priority) and 5 (lowest priority). Therefore, when reading Table 12, a lower score indicates a measure of first priority rather than a higher mean score.

Individual competency statements are arranged in Table 12 with the statement of each cluster having the lowest total sample mean score first (highest priority competency of the cluster), followed by the remaining statements listed in descending order of priority according to the total sample mean score of each statement. The competency displaying the highest total sample mean score (lowest priority competency of the cluster) appears at the end of each particular cluster.

| | | | | | | | |

According to Table 12, in the Foundation of Cooperatives cluster, the competency ranked with the least variation/most agreement was "Know and apply the cooperative philosophy" (priority # 2, S.D.= 1.09), and the competency ranked with the most variation/least agreement, was "Know how to defend cooperative interests before governmental institutions" (priority # 5, S.D.= 1.42).

In the Overall Knowledge cluster the competency ranked with the least variation/most agreement was "Have knowledge about the cooperative administrative, financial and operational structure" (priority # 1, S.D.= 1.02), and the competency ranked with the most variation/least agreement was "Have knowledge about agriculture" (priority # 3 , S.D.= 1.48).

In the Cooperative Administration cluster the competency ranked with the least variation/most agreement was "Know how to formulate policies consistent with the objectives of the cooperative" (priority # 5, S.D.= 1.19), and the competency with the most variation/least agreement was "Know how to assure that the bylaws and regulations of the association are observed by members and employees" (priority # 4, S.D.= 1.53).

In the Decision Making cluster the competency ranked with the least variation/most agreement was "Have initiative and decision making abilities" (priority # 1, S.D. 0.99), and the competency with the most variation/least agreement

was "Be aware of his authority and responsibilities in legal and social matters" (priority # 2, S.D. 1.35).

In the Human Resources cluster the competency ranked with the least variation/most agreement was "Know how to delegate authority appropriately" (priority # 1, S.D. 1.00) and the competency ranked with the most variation/least agreement was "Know how to evaluate performance of employees and the cooperative as a whole" (priority # 3, S.D. 1.35).

In the Membership Relations cluster the competency ranked with the least variation/most agreement was "Assure that the members are the main goal of the organization" (priority # 1, S.D.1.11), and the competency ranked with the most variation/least agreement was "Keep channels of communication open among directors, members, and employees" (priority # 2, S.D. 1.42).

In the Vision cluster the competency ranked with the least variation/most agreement was "Know how to guide directors, employees, and members in a clear and complete way" (priority # 1, S.D. 1.29), and the competency ranked with the most variation/least agreement was "Act as a model influencing positive behavior of employees and members" (priority # 5, S.D. 1.63).

In the Communication cluster the competency ranked with the least variation/most agreement was "Know how to communicate clearly" (priority # 4, S.D. 1.28) and the competency ranked with the most variation/least agreement

was "Know how to direct meetings" (priority # 5, S.D. 1.52).

In the Leadership cluster the competency ranked with the least variation/most agreement was "Have leadership abilities" (priority # 2, S.D. 1.12), and the competency ranked with the most variation/least agreement was " Have common sense" (priority # 3, S.D. 1.36).

These data indicate that in 78 percent of the cases (seven of nine) the competencies that had the most agreement were the competencies ranked as first or second priority, and in 78 percent of the cases (seven of nine) the competencies having the least agreement were the competencies ranked as third, fourth, or fifth priority.

PERCEPTIONS ON PRIORITY RANKING COMPETENCIES WITHIN EACH OF THE NINE CLUSTERS BY COOPERATIVES'
ORGANIZATIONAL CHARACTERISTICS

Cooperatives' Commodity

Table 13 displays the results of the one-way analysis of variance (ANOVA) test on individual competencies for the nine clusters based on six cooperatives of different commodities. This table indicates the mean and standard deviation for each competency by cluster in each commodity group, the number of respondents, the F probability, and significant difference at the 0.05 level.

All competency statements, except for one competency in the Membership Relations cluster ("Instill in members their responsibility for making the cooperative successful"),

^{* :} Significant difference at 0.05 and 95% confidence interval

showed a high degree of agreement among the respondents from all six cooperative commodity groups with respect to priority ranking competencies for cooperative presidents. Respondents from Crops/Livestock cooperatives placed higher priority on the above competency with a computed mean score of 1.5833. Each of the other five commodity groups had mean scores within the range of 3.000 to 3.2308.

Cooperatives' Number of Employees

For tabulation purposes, it was decided to combine the four categories of cooperatives' number of employees into two: cooperatives with 100 employees or less, and those with more than 100 employees.

Table 14 displays the results of a t-Test analysis comparing responses of administrators from cooperatives with 100 or less employees and cooperatives with more than 100 employees. The table presents information about the mean, standard deviation, number of respondents, 2 tail probability, and significant differences at the 0.05 level for each competency according to the perceptions of the respondents in each of the two groups.

The only competency that indicated a statistically significant difference between cooperatives with 100 or less employees and those with more than 100 employees was the statement, "Know how to formulate policies consistent with the objectives of the cooperative" in the Cooperative

Administration cluster. The mean score of cooperatives with 100 or less employees for this competency was 3.6286, and for cooperatives with more than 100 employees the mean was 3.0345. All other competencies indicated no significant differences at the 0.05 level on the way cooperative administrators of different organizations' personnel size prioritize each competency.

Cooperatives' Membership

For the purpose of statistical analysis, it was decided to combine membership into two groups: 750 members or less and those with more than 750 members. Table 15 displays the results of a T-test analysis comparing responses of administrators of those two groups.

There was a significant difference at the 0.05 level between the two groups regarding their perception of priority ranking the competency, "Know how to administer the cooperative as a business and social operation" in the Cooperative Administration cluster. Cooperatives with 750 members or more placed higher priority (2.0556) on this competency than cooperatives with less than 750 members (2.7586).

Data from the t-Test analysis for the competency "Know how to make decisions under condition of risk" in the Decision Making cluster, indicated that the mean score of respondents of cooperatives with 750 members or more

^{* :} Significant difference at 0.05 and 95% confidence interval

(2.6944) was significantly lower than that of cooperatives with less than 750 members (3.3793). Respondents from organizations with larger membership placed higher priority on this competency than respondents from smaller organizations.

Data from the t-Test analysis for the competency,
"Know how to guide directors, employees, and members in a
clear and complete way" in the Vision cluster, showed that
respondents from cooperatives with less than 750 members
priority ranked this competency higher (2.2333) than
cooperatives with 750 or more members (2.8857).

There were no significant differences at the 0.05 level on the way administrators from different sized cooperatives priority ranked other competencies.

PERCEPTIONS ON PRIORITY RANKING COMPETENCIES WITHIN EACH OF THE NINE CLUSTERS BY COOPERATIVE ADMINISTRATOR' PERSONAL CHARACTERISTICS

Administrator's Level of Schooling

For analysis purposes, educational level was combined into just two groups of respondents: those with less than a university degree and respondents with a university degree.

Upon conducting the t-Test analysis for the competencies within each of the nine clusters, the results showed there were significant differences in the perceptions of priority ranking some of the competencies; these are presented in Table 16

Note: U.D. = University Degree

^{* :} Significant difference at 0.05 and 95% confidence interval

Statistical data showed that administrators without a university degree placed significantly higher priority (2.6667) on the competency, "Knowledge about Agriculture" in the Overall Knowledge cluster than administrators with more education (3.4167).

Cooperative administrators with a university degree placed significantly higher priority (3.0833) on the competency, "Have experience in other management positions" in the Overall Knowledge cluster than cooperative administrators without a university degree (3.8148).

On the competency, "Know how to formulate policies consistent with the objectives of the cooperative" in the Cooperative Administration cluster, the results showed that there was a significant difference between the groups.

Administrators with a university degree priority ranked this competency higher (3.0556) than administrators with less than a university degree (3.7308).

Administrators with a university degree placed a significantly higher priority (2.5135) on the competency, "Instill in members their responsibility for making the cooperative successful" than did administrators with less than a university degree (3.2963).

There were no significant differences on the way cooperative administrators with different level of schooling perceived the importance of other competencies within the nine clusters.

Administrator's Years of Experience

For statistical purposes the respondents' answers were combined into two groups of administrators, those with ten years of experience or less and those with more than ten years of experience. Results from the t-Test analysis comparing the perceptions of these two groups of cooperative administrators are presented in Table 17.

The only competency that had significant difference at the 0.05 level between the groups was "Keep up-to-date with the economic and social cooperative system" in the Vision cluster. Administrators with more than ten years of experience placed significantly higher priority (2.3182) on this competency than administrators with less years of experience (3.4762).

Administrator's Training Programs Attended

For statistical purposes, the responses were combined into two groups of administrators, those who had attended no training and those administrators who attended at least one training program. Table 18 shows that there was no significant difference at the 0.05 level between the perceptions of cooperative administrators who attended at least one training program and those who had not attended any.

DESCRIPTION OF OUTSTANDING PRESIDENTS

The nominated presidents who responded to this questionnaire survey provided information about the following organizational and personal characteristics of their organizations and themselves: (1) commodity, (2) number of employees, (3) membership, (4) president's level of schooling, (5) president's years of experience, and (6) president's participation in training programs. The summary of the outstanding presidents' characteristics are displayed in Table 19. Following is a brief discussion of the important aspects of these characteristics.

It appears that the cooperatives' commodity was not a factor in determining best presidents, since every cooperative commodity group was represented by at least one outstanding president, except the Sugar Cane cooperatives.

The majority of outstanding presidents, six of the seven (85.7 percent) belonged to a cooperative with more than 100 employees; one of the seven (14.3 percent) belonged to a cooperative with 51 - 100 employees.

Of the seven outstanding presidents, six (85.7 percent) belonged to cooperatives with 750 members or more, one of the seven (14.3 percent) belonged to a cooperative with less than 150 members.

Of the seven outstanding presidents, four (57.1 percent) had university degrees, one (14.3 percent) had a primary school degree, one (14.3 percent) had a high school

degree, and one (14.3 percent) had a technical school degree.

Of the seven outstanding presidents, four (57 percent) had more than ten years of experience, and none with less than three years of experience.

Of the seven, four (57 percent) had attended at least two training programs; two of the seven (28 percent) had attended one, and only one (14 percent) had never attended any training program.

PERCEPTIONS OF OUTSTANDING PRESIDENTS ON PRIORITY RANKING COMPETENCIES WITHIN THE NINE CLUSTERS

Table 20 displays the results of a t-Test analysis comparing responses from the average presidents and the seven cooperatives' presidents nominated as outstanding.

There was a significant difference between the two groups regarding their perceptions on priority ranking the competency, "Have knowledge about current cooperative legislation" in the Foundation of Cooperative cluster. The average presidents placed higher priority on this competency (3.1400) than the outstanding presidents (4.2857).

There was a significant difference between the two groups regarding their perceptions on priority ranking the competency, "Know how to communicate clearly" in the Communication cluster. The average presidents placed higher priority on this competency (2.7500) than the outstanding presidents (4.0000).

^{* :} Significant difference at 0.05 and 95% confidence interval

The competency that also indicated a significantly difference between the two groups was "Have a high capacity to work" in the Leadership cluster. The average presidents placed higher priority on this competency (3.0000) than did the outstanding presidents (4.0000).

SUMMARY OF WRITTEN COMMENTS

Additional Competencies

At the end of Part I of the questionnaire respondents were encouraged to mention additional competencies that were not included in the study. Following are some of the additional competencies cited:

- . Know how to adopt an organizational view of the business, be impartial and without paternalism;
- . Be optimistic and believe in God;
- . Be a business man;
- . Prioritize cooperative education;
- . Have no ambitions for himself.

Duties and Responsibilities of a Cooperative President

The third part of the questionnaire asked opinions of the respondents concerning the responsibilities and duties of a cooperative president. Of the sixty-seven respondents, fifty-three (79 percent) provided a written response to the statement: "What do you consider the most important duties and responsibilities of a president of an agricultural

cooperative?" Respondents' comments are presented in Appendix C. Following are a few of the most important duties and responsibilities mentioned most often.

- Administering the cooperative with honesty and hard work.
- Fulfilling the cooperatives' bylaws and regulations,
 and applying them for good understanding between,
 Board of Directors, members, and employees.
- Having a cooperative spirit and following the cooperative philosophy.
- Knowing how to organize, coordinate, and recruit a hard working team.

Other comments were that the president should have initiative, inspire trust, be able to make decisions, promote the economic and social development of the cooperative, and be able to respond to the needs of all members; treating them equally and fairly regardless of economic or social status.

Of the respondents, two commented that the president administer the cooperative as a social organization above personal interests. A representative comment was: "Be aware that you are a president for a certain period of time and the cooperative is not your property, it belongs to all the members to whom you are administering for a determined period of time."

One respondent believed that the cooperative president

should have knowledge about agriculture, he wrote: "... It is essential to have knowledge about agriculture in order to understand the cooperatives' members and their needs. There are cases where the president has a university degree but does not know anything about agriculture."

The Criteria of Nominating Outstanding Presidents

In Part III of the questionnaire, the respondents were asked to nominate five outstanding presidents. Although the format of the questionnaire did not include a space for comments, some respondents chose to give additional information about their criteria for nominating an outstanding president or an explanation as to why they had chosen not to nominate any one.

One respondent said: "The criteria chosen to select the outstanding presidents was based on the size of the cooperative and the number of times the president has been reelected". Others indicated a totally negative attitude toward the idea of nominating outstanding presidents by crossing out the space.

Another respondent mentioned that the reason he was not going to answer to this question was that he had been involved with cooperative administration for only a short time and was unprepared to make a fair nomination. Another respondent wrote: "Since I personally have more contact with presidents of dairy cooperatives, and I do not know

presidents of other cooperatives, I will not nominate any name in order to not commit an injustice."

There were indications that some respondents had taken a considerable amount of time completing this question. One respondent, who did not nominate an outstanding president, wrote: "Every person who believes and dedicates himself to the cooperative doctrine in its fullest sense of the word stands out in the community. It does not matter if his organization is small or large, powerful or not; it does not matter if his cultural level is high or not, if his acts are great or simple; what really matters is that he is defending the interests of the whole group, without advocating his own causes — and this ennobles the person. For this reason, in my opinion, from the humblest to the wittiest, all of them are outstanding."

General Comments About the Questionnaire

Some respondents chose to give their comments about the questionnaire in the blank space left on the last page. One respondent congratulated the work being done on this subject. Another respondent chose to give feedback on his responses. He wrote: "In many situations we are not able to be the mirror of our response to this questionnaire, in a country such as Brazil, where there is no security in the agricultural sector. Despite the fact that we are aware of the main goal of cooperatives -- the members -- we cannot

think of cooperatives without giving a special consideration to the business organizations that they are also. At the end of the year, when it is time to present the financial report, we have to show evidence of economic good standing or provide patronage refunds. After all, it is hard or even impossible to share losses.

CHAPTER V

SUMMARY, RESEARCH FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

Cooperatives in the State of São Paulo are becoming larger and business operations, consequently, are becoming more technical and complex. This mandates a change in management techniques and procedures. Presidents, who are the farmers themselves, need to continually develop their administrative skills oriented to business and social organizations.

Effective training programs can respond to such needs through the inclusion of high priority competencies in the program content. Through an extensive review of the literature, this study determined essential competencies needed to administer the cooperative organizations. Those competencies were organized into nine clusters, which key people in the administration of cooperatives were asked to priority rank those competencies in order of importance.

Cooperatives of six commodity groups were represented in the survey population: Coffee, Dairy, Crops/Livestock, Sugar Cane, Mixed, and "Other" cooperatives. Also, cooperatives with different personnel, and membership sizes

were represented in the survey population, along with administrators with different levels of schooling, years of experience, and number of training programs attended.

of the questionnaires mailed to cooperative administrators, seventy-four were returned (49 percent response rate); however, some of the respondents misunderstood the correct way to answer Part I of the survey. Therefore, for analysis purposes of Part I and Part II, only the sixty-seven correctly answered questionnaires (44 percent response rate) were used. The data were analyzed using: (1) frequencies, percent, mean, and standard deviation, (2) cross-tabulation, and (3) One-Way Analysis of Variance (ANOVA), t-Test, and Friedman's Analysis of Variance for ranked data.

In order to utilize the valuable information provided, all seventy-four questionnaires returned were used in Part III. In this part of the questionnaire, the respondents were asked their opinions on the most important duties and responsibilities of a cooperative president and to also name five outstanding presidents in the State of São Paulo.

RESEARCH FINDINGS

A summary of the research findings is presented within each frame of the research question.

Research Question # 1: What are the organizational and personal characteristics of the survey population?

Most of the cooperatives in the State of São Paulo,
Brazil have more than fifty employees (65.1 percent) and
more than 750 members (54.5 percent). Coffee cooperatives
are the largest organizations in terms of the number of
employees and membership. More than half the Coffee
cooperatives (61.5 percent) reported having more than 100
employees, and 84.6 percent reported having more than 750
members. On the other hand, Mixed cooperatives are the
smallest organizations in terms of number of employees and
membership. Fifty percent of the Mixed cooperatives
reported having less than twenty employees and 56.2 percent
reported having less than 300 members. Dairy cooperatives
have the highest employee-member ratio.

Most administrators of cooperatives in the State of São Paulo, Brazil have university degrees (57.8 percent), at least five years of experience as cooperative administrators (66.7 percent) and have never attended a training program (52.3 percent). Almost half (40 percent) of the administrators with university degrees have graduated from law school.

The great majority (70 percent or more) of the administrators of Coffee, Crops/Livestock, and Sugar Cane cooperatives have university degrees. On the other hand, Mixed cooperatives have the least number of administrators with University degrees (26.6 percent) and the most with

middle school education (40 percent). No wide variations were found among administrators based on years of experience. Dairy cooperatives' administrators have received the most training; 61.5 percent of them have attended two or more training programs, while more than one-half of the administrators of other cooperatives have never participated in any training program.

Research Question # 2: What are the opinions of members of the survey population regarding priority ranking competencies for an agricultural cooperative president?

Cooperative administrators ranked the following competencies as the highest priority competency of each cluster:

Foundation of Cooperatives: Have cooperative spirit

Overall Knowledge: Have knowledge about the cooperative administrative.

financial and operational

structure

Cooperative Administration: Know how to manage the

cooperative in a participative

and democratic structure

<u>Decision Making:</u> Have initiative and decision

making abilities

<u>Human Resource Management</u>: Know how to delegate authority

appropriately

Membership Relations: Assure that the members are

the main goal of the

organization

<u>Vision</u>: Know how to guide other

directors, employees and members in a clear and

complete way

Communication: Know how to instill trust

<u>Leadership</u>: Be honest, of good character

and reputation

Research Question # 3: Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents?

Friedman's Analysis of Variance revealed that there were statistical differences at the 0.05 level and 95 percent confidence interval in the way respondents priority ranked competencies in eight of the nine clusters. The Vision cluster was the only cluster with no significant difference in priority ranking competencies. However, further analysis (T-test analysis by cooperative' membership in Table 15, and T-test analysis by administrators' years of experience in Table 17) revealed significant differences in the way respondents priority ranked some competencies. This may be attributed to the fact that Friedman's Analysis of Variance test did not detect differences that were scattered, while more specific analyses detected concentrated differences.

Research Question # 4: Are there significant differences between members of the survey population regarding priority ranking competencies for cooperative presidents that can be attributed to organizational characteristics (commodity of the cooperative, number of employees, and membership size)?

ANOVA and t-Test analyses were conducted to determine whether there were significant differences in priority

ranking competencies between groups of key organizational characteristics. The analysis revealed that there were statistically significant differences at the 0.05 level regarding priority ranking in the following groups:

- 1. Respondents from the Crops/Livestock cooperatives placed higher priority on the following competency than respondents of other cooperative commodities: "Instill in members their responsibility for making the cooperative successful" in the Membership Relations cluster.
- 2. Respondents from cooperatives with more than 100 employees placed higher priority on the following competency than respondents from cooperatives with 100 or less employees: "Know how to formulate policies consistent with the objectives of the cooperative" in the Cooperative Administration cluster.
- 3. Respondents from cooperatives with 750 members or more placed higher priority than respondents from cooperatives with less than 750 members on the following competencies:

 "Know how to administer the cooperative as a business and social operations" in the Cooperative Administration cluster; and "Know how to make decisions under conditions of risk" in the Decision Making cluster. On the other hand, respondents from cooperatives with less than 750 members

placed higher priority on the following competency than respondents from cooperatives with 750 members or more:
"Know how to guide other directors, employees, and members in a clear and complete way" in the Vision cluster.

Research Question # 5: Are there significant differences between members of the survey population regarding priority ranking competencies that can be attributed to administrators' personal characteristics (level of schooling, years of experience, number of training programs attended)?

t-Tests were conducted to determine whether there were significant differences in priority ranking competencies between groups of key administrators' personal characteristics. The analysis revealed that there were statistically significant differences at the 0.05 level in the following groups:

1. Respondents without university degrees placed higher priority than respondents with university degree on the following competency: "Knowledge about agriculture" in the Overall Knowledge cluster. On the other hand, respondents with university degrees placed higher priority than respondents without university degrees on the following competencies: "Have experience in other management positions" in the Overall Knowledge cluster; "Know how to formulate policies consistent with the objectives of the cooperative" in the Cooperative Administration cluster; and "Instill in members their responsibility for making the

cooperative successful" in the Membership Relations cluster.

- 2. Respondents with more than ten years of experience placed higher priority than respondents with less years of experience on only one competency: "Keep up-to-date with the economic and social cooperative system" in the Vision cluster.
- 3. No significant differences were found between administrators who attended a training program and those who had never attended one on the perceptions of priority ranking competencies for cooperative presidents within the nine clusters.

Research Question # 6: What are the organizational and personal characteristics of the nominated outstanding presidents?

The great majority (85.7 percent) of outstanding presidents belonged to cooperatives with more than 100 employees and more than 750 members. Most of them (57 percent) had university degrees and more than ten years of experience. The great majority (85.7 percent) had attended at least one training program.

Research Question # 7: Are there significant differences between the average and the nominated outstanding presidents regarding priority ranking competencies for an agricultural cooperative president?

The average presidents placed higher priority than the

outstanding presidents on the following competencies: "Have knowledge about current cooperative legislation" in the Foundation of Cooperatives cluster; "Know how to communicate clearly" in the Communication cluster, and "Have high capacity to work" in the Leadership cluster.

Table 21 summarizes the results from Anova and T-test regarding differences between members of the survey population on priority ranking competencies for cooperative presidents.

Research Question # 8: What are the most important duties and responsibilities of a cooperative president as perceived by the respondents?

Respondents, when given the opportunity to make additional comments about important duties and responsibilities of cooperative presidents, indicated an overwhelming importance be placed on administering the cooperative with honesty and hard work. Also, respondents felt that cooperative presidents should possess a cooperative spirit and follow the cooperative philosophy. The next most important duty and responsibility of cooperative presidents was to fulfill the cooperatives' bylaws and regulations and apply them for good understanding between the Board of Directors, members, and employees.

CONCLUSIONS

Conclusion # 1: Most of the cooperative administrators had a
much higher level of schooling than their members. Almost

Table 21.—Summary of the results from ANOVA and t-Test regarding differences between respondents' perceptions in priority ranking competencies for cooperative precidents

| | | Organizational and admi- | Organizational and administrators' personal characteristics | stice | | |
|--------------------------------|----------------------|--|--|--|--|---|
| Placed Higher Priority | Commodity | Number of Employee | Menbership size | Years of Schooling | Experience | Level of performance |

| Foundation of Cooperative | | | | | | Have Innowledge about current cooperative |
| Overall Knowledge | | | | (1) knowledge about agriculture (2) Have experience in other mg.positions | | legislation |
| Cooperative Administration | | Know how to formulate policies consistent with the objectives of the coop. | (2) Know how to administer the coop. as a business and social operations | (2) Know how to formulate policies consistent with the objectives of the coop. | | |
| Decision Malding | | | (2) know how to make decisions under conditions of risk | | | |
| Human Resource Managment | | | | | | |
| Membership Relations | Pone 1 | bers Joility coop. | | (2) Instill in members their responsibility for making the coop. | | |
| Vision | | | (1) Know how to guide Directors,members and employees in a | | Keep up-to-date with the economic and social coop. | ij. |
| Communication | | | clear and complete way | | system | Know how to communicate clearly |
| Leadership | | | | | | Have a high capacity to work |

80 percent of cooperative administrators led an organization made up of 23 percent (Table 2) of its members having education beyond elementary school. This leads to the conclusion that participation in the administration of a cooperative is largely a function of one's level of schooling.

Conclusion # 2: Only five of forty-five competencies were selected one time as unimportant. The conclusion, then, is that the respondents agreed that all the competencies stated are important in carrying out the responsibilities of the cooperative president.

Conclusion # 3: Although Friedman's Analysis of Variance showed significant differences in the way respondents priority ranked eight of the nine study clusters, only in nine of the forty-five competency statements (20 percent) could those differences be attributed to the organizational and administrators' personal characteristics included in the study. It may be concluded, that there may be other factors influencing the perception of priority ranked competencies for cooperative presidents which were not included in this study that are relevant when designing a training program.

Conclusion # 4: The respondents tended to agree on the
competencies perceived as the highest priorities, but they

were not in agreement with the competencies perceived as the lowest priorities. Therefore, when establishing a training program for cooperative presidents, its content shall not be in conflict with the highest priority competencies determined in this study.

Conclusion # 5: The results from this study found no support for the hypothesis that organizational or personal characteristics are factors which can prevent the effectiveness of developing training programs directed to all cooperative presidents regardless of organizational or personal characteristics.

Conclusion # 6: The resulting list of the highest priority competencies indicated that a cooperative president should possess competencies related to The Management Competency Model. This model characterizes competencies as holistic; that is, it included a knowledge component, a behavioral component, an affective component, and a motivational component. So when this study identified competencies for cooperative presidents, it included those components. Competencies with the behavioral, the affective, and the motivational component could rarely be identified if the Task and Function Analysis was the sole approach used to determine competencies for a cooperative president, since this approach has been criticized as addressing only

external observable behaviors. Therefore, The Management Competency Model is the best approach to delineate the highest priority competencies for a cooperative president.

Conclusion # 7: The highest priority competencies determined in this study suggested that the responsibilities and duties of a cooperative president involve much more than the skills and abilities necessary to carry on a business operation; it involves the whole person. Thus, training programs for cooperative presidents must not be limited to developing skills and abilities on how to perform tasks but should go far beyond; programs should develop the inner values of a person.

STUDY LIMITATIONS

First, as has been mentioned previously, the relatively low response rate to the questionnaire survey (49 percent) limited the generalization of the conclusions of this study.

Second, since the great majority of the respondents were cooperative presidents, this study did not register the opinions of administrators in the administrative or financial director positions who might have different perceptions of competencies for cooperative presidents.

Third, the list of competencies used in this study are important but there may be some additional competencies necessary for a cooperative president to deliver a quality

job.

And, finally, the priority competencies determined in this study should be viewed as preliminary and not conclusive. This study is offered as a vehicle to provoke careful thought about aspects of the job of a cooperative president which may not have been previously examined. Nonetheless, it should serve as a basis and guide to the content of training programs for cooperative presidents.

RECOMMENDATION FROM THIS STUDY

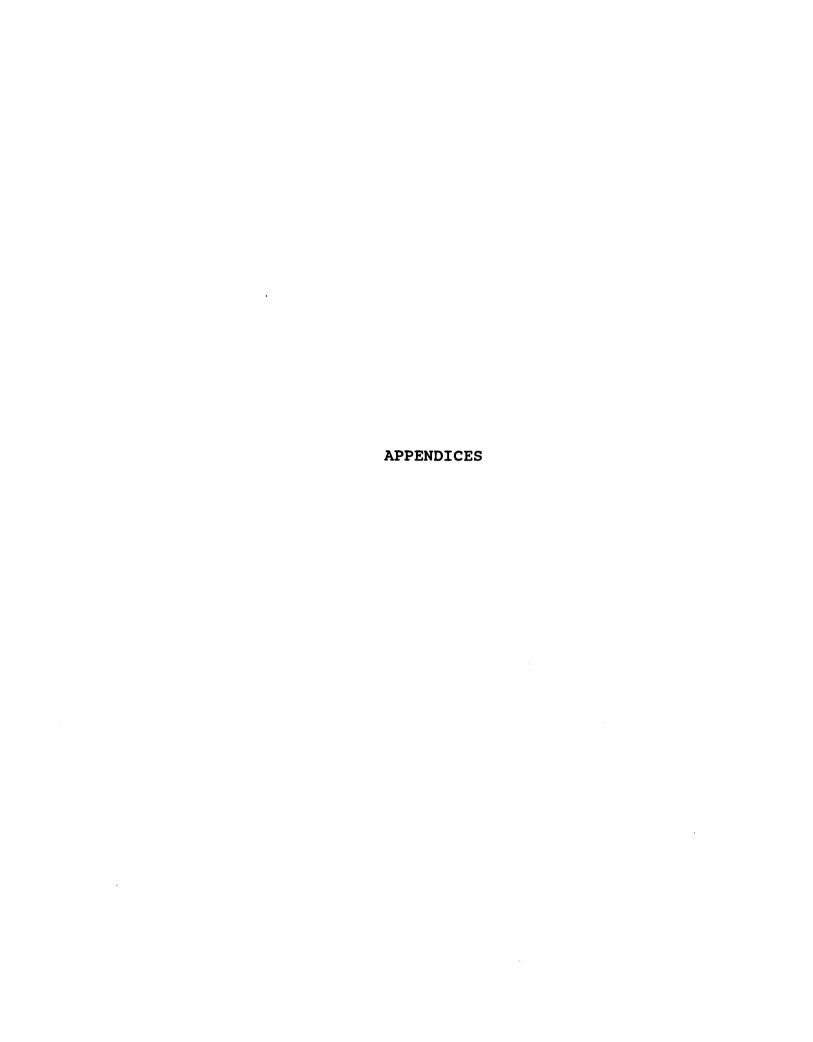

The review of literature indicated that training programs for cooperative administrators are essential for the success of the organizations. The result of this survey research indicated that most cooperative administrators (52.3 percent) have never attended a training program. This demonstrates that training programs for cooperative administrators in the State of São Paulo still is in a early formative phase.

Governmental institutions related to the cooperative movement and cooperatives themselves should make every possible effort to involve as many administrators as possible in training programs.

RECOMMENDATIONS FOR FURTHER RESEARCH

Listed below are some recommendations arising directly or indirectly out of this study. They are:

- 1. To adapt the questionnaire and replicate the study for completion by other members of the Board of Directors.
- To adapt the questionnaire and replicate the study for completion by cooperatives' members. Investigate their perceptions of important competencies for cooperative presidents.
- 3. To adapt the questionnaire and replicate the study aiming higher response rate specially from administrators with less schooling and less years of experience.
- 4. To conduct a study to assess the planned training programs to maximize the probability that training will result in the development of those high priority competencies.
- 5. To conduct a study assessing the impact of training programs on the performance of cooperatives' administrators.
- 6. To conduct further intensive research, possibly by means of personal interviews with nominated outstanding presidents to determine the factors that make them outstanding.

APPENDIX A

QUESTIONNAIRE SURVEY
(Portuguese and English Version)

REQUISITOS PRINCIPAIS DE PRESIDENTES DE COOPERATIVAS AGRICOLAS

O objetivo dêste questionário é identificar quais os requisitos que um presidente de cooperativa agrícola deve possuir, para desempenhar com sucesso as funções de administrador. As informações obtidas nesta pesquisa servirão para desenvolver um estudo na Michigan State University - Estados Unidos, sobre cooperativas agrícolas no estado de Sao Paulo.

Responda cada questão atentamente, usando suas experiências e seu desempenho atual.

PART I

Abaixo estão relacionados alguns requisitos necessários do presidente de cooperativa. Comece lendo os 5 ítens de cada bloco e então, enumere-os em ordem de importância.

1 (mais importante) a 5 (menos importante). Se considerar o requisito não importante use 0.

PARA SER UM BOM PRESIDENTE DE COOPERATIVA É PRECISO.....

| — | 3 - | • | _ | _ |

QUESTIONNAIRE

This research concerns the functions of a president of an agricultural cooperative. The information from this study will serve to develop a study at Michigan State University - Michigan, USA.

Answer each question thoughtfully using your own experiences and current work.

PART I

The following are some competencies to successfully perform the job of a president of a cooperative. Please, read the 5 items, and then, order them in order of importance. 1 (most important) to 5 (least important). If you feel that the competence is not important at all use 0.

TO BE A GOOD COOPERATIVE PRESIDENT IT IS NECESSARY TO

___ Know and apply the cooperative philosophy Have cooperative spirit
Have knowledge about current cooperative legislation Have knowledge about the cooperative way of doing business Know how to defend cooperative interests before Governmental institutions ____ Have knowledge about agriculture Have experience in others management positions Have knowledge about marketing channels Have knowledge about cooperative administrative, financial and operational structure ___ Knowledge about the social, economic, and political environment in which the cooperative operates Know how to administer the cooperative as a business and social operation ___ Know how to manage the cooperative in a participative and democratic structure Know how to formulate policies consistent with the objectives of the cooperative ___ Know how to identify alternatives in solving problems ___ Know how to assure that the bylaws and regulations of the association are observed by members and

employees.

TO BE A GOOD COOPERATIVE PRESIDENT IT IS NECESSARY TO ___ Have initiative and decision making abilities Be aware of his authority and responsibilities in legal and social matters Know how to make decisions under conditions of risk Know how to withstand pressure and remain calm in crisis situations Know how to deal with conflict directly and tactfully Know how to delegate authority appropriately Know how to understand and respond to members and employees' needs within the limits of bylaws and regulations Know how to coordinate people, activities, and facilities _ Know how to ensure employees' good performance Know how to evaluate performance of employees and the cooperative as a whole _ Assure that the members are the main goal of the organization _ Keep members informed about policies and operating practices ___ Instill in members their responsibility for making the cooperative successful Motivate members to participate in the cooperative issues Keep channels of communication open among directors, members, and employees _ Promote the educational development of employees and members Display a progressive attitude for development and expansion of the cooperative __ Keep up-to-date with the economic and social cooperative system ___ Act as a model influencing positive behaviors of

COVER LETTERS

(Portuguese and English Version)

Michigan State University 410 Agriculture Hall East Lansing, Michigan 48824 - 1039 (517) 355 - 6580

Marilia, de Janeiro de 1990

Prezado Sr.:

Como administrador desta Cooperativa, V.S. esta a par da importância dos programas educacionais para o desenvolvimento das cooperativas agrícolas.

Este é um estudo que está sendo realizado na Michigan State University - Estados Unidos, com a finalidade de determinar os principais requisitos de um presidente de cooperativa.

V.S. foi selecionado para participar dêste estudo devido sua experiência e conhecimento na administração de cooperativas agrícolas. Quando completa, esta pesquisa será uma nova fonte literária para o desenvolvimento de programas de treinamento para administradores de cooperativas.

Faz-se necessario ressaltar que suas respostas serão tratadas confidencialmente. O questionário tem um número de identificação apenas para propósitos estatísticos. Seu nome nunca será mencionado no questionário. Sua participação neste estudo é voluntária, no entanto nós agradecíariamos sua colaboração.

Foi estimado que o preenchimento deste questionário levará de 15 a 20 minutos. Em caso de dúvida sobre alguma questão comuniquese com o seguinte telefone a fim de obter maiores informações (0144) 33-24-87.

Devido ao tempo limitado que temos no Brasil para a coleta de dados, pedimos a gentileza de retornar este questionario em duas semanas, no mais tardar dia . Junto segue um chiclete Wrigley's para auxiliar sua concentração!

Agradecemos sua colaboração, e aguardamos sua breve resposta.

Marilia H. Guillaumon-Gerges

- * Junto segue xerocópia da carta enviada pelo Ilmo Sr. Secretário Nacional de Cooperativismo Sr. Adair Mazzotti, com recomendação do Exmo Sr. Ministro da Agricultura Dr. Iris Rezende Machado enfatizando a importância desse estudo.
- ** Em anexo segue envelope selado para remessa do questionário resposta.

Do :SECRETÁRIO NACIONAL DE COOPERATIVISMO

Endereco: SBS ED. ADRIANA Q. 02 BL2 "D" LOTE 16

Ao :

Assunto :

Senhor Presidente

A bolsista Brasileira Marilia Guillaumon-Gerges,ora cur sando o programa de Doutorado na Michigan State University - Estados Unidos, solicita nosso apoio, para qué as Cooperativas Agrícolas do Estado de São Paulo, venham a colaborar no preenchimento de um questionário, e o façam retornar a Doutoranda, afim de que os dados obtidos, possam ser trabalhados no desenvolvimento de programas de interesse das Cooperativas Brasileiras, principalmente nas áreas de treinamento e capacitação.

O Senhor Ministro da Agricultura, Doutor Iris. Rezende Machado, recomendou-nos que fizessemos a apresentação da bolsista, pela grande contribuição que essa iniciativa pode proporcionar ao Cooperativismo Brasileiro.

Sr. Presidente, por acharmos de fundamental importância, para o Cooperativismo esta pesquisa, solicitamos mais uma vez, sua gentileza, no sentido de dar toda atenção ao trabalho, que merece todo o nosso apoio.

ATENCIOSAMENTE

SECRETARIO NACIONAL DE COOPERATIVISMO

Michigan State University 410 Agriculture Hall East Lansing, Michigan 48824 - 1039 (517) 355 - 6580

Marilia, Janeiro de 1990

Prezado Sr.:

Há duas semanas atrás, um questionário foi enviado à V.S. com a finalidade de obter suas opiniões sobre os principais requisitos de um presidente de cooperativa.

V.S. foi selecionado para participar desta pesquisa devido seus conhecimentos e experiência na administração de cooperativas.

Se V.S. já completou e retornou o questionário, agradecemos, do contrário, por favor, preencha-o tão logo possivel. Sua contribuição é muito importante e estamos contando com sua colaboração.

Se por alguma razão V.S. não recebeu o questionário, ou este perdeu-se, comunique-se conosco no endereço abaixo que tão logo enviaremos um outro.

Cordialmente, agradecemos.

Rua Alvares Cabral 290 Marilia - SP 17500

Michigan State University 410 Agriculture Hall East Lansing, Michigan 48824 - 1039 (517) 355 - 6580

> Marilia. Fevereiro de 1990

Prezado Sr.:

Acêrca de 4 semanas atrás foi enviado um questionário a fim de obter suas opiniões sobre quais são os principais requisitos para ser um bom presidente de cooperativa. No entanto, sua resposta ainda não foi recebida.

O Departamento de Educação e Extensão Rural da Michigan State University, através deste projeto, encarregou-se deste estudo por ter convicção que sua opinião como administrador desta cooperativa deve ser levada em conta.

O motivo desta correspondência é por causa de que cada questionário tem importância significativa para este estudo. Para que os resultados desta pesquisa seja realmente representativo das opinioes dos administradores de cooperativas é essencial que todas as pessoas retornem o questionário.

É importante esclarecer a completa confidencialidade deste estudo. O questionário tem um número de identificação somente para propósitos estatísticos, e seu nome não será colocado no questionário.

Em caso que seu questionário foi extraviado, segue em anexo um substituto. Foi estimado que levará de 15 a 20 minutos para completá-lo. Devido ao tempo limitado que temos no Brasil para a coleta de dados, pedimos a gentileza de retornar este questionário respondido o mais breve possível.

Ficando no aguardo de breve resposta, agradecemos.

Cordialmente,

Dr. Donald Meaders

Prof. Michigan State

[first & last name]
[name & address of cooperative]

Dear Mr. [last name]:

As the administrator of [name of the cooperative] you are undoubtedly aware of the importance of educational programs for agricultural cooperatives.

This study is being done at Michigan State University - USA, with the objective of determining what are the competencies that enable cooperative presidents to successfully perform their work.

You have been selected to participate in this study, because of your experience and understanding of cooperative administration. When completed, this study will contribute to the field of literature for the development of training programs for cooperative administrators. You may be assured of complete confidentiality. The questionnaire has an identification number for statistical purposes only. Your name will never be placed on the questionnaire. Your completion of the survey is completely voluntary with no penalty for non-participation. The return of the survey constitutes your consent.

We estimate that it will take 15-20 minutes to complete the questionnaire. If you have any questions about the study, please use the following telephone number to request additional information

Considering that we have limit time in Brazil to collect the data for this research project, please return the completed questionnaire within 2 weeks, no later than January, 1990.

Thank you for the contribution. Enclosed is a chewing gum to help your concentration.

Sincerely,

Major Professor

Researcher

P.S. Please note the enclosed letter of endorsement by the National Secretary of Cooperatives, Mr. Adair Mazzotti, under the recommendation of the Ministry of Agriculture, Dr. Iris Rezende.

FIRST FOLLOW-UP

[date]

[first & last name]
[position]
[name & address of cooperative]

Dear Sir:

Two weeks ago, a questionnaire seeking your opinion about the highest priority competencies for presidents of cooperatives was mailed to you.

You were selected to participate in the study because of your knowledge and experience in administration of cooperatives.

If you have already completed and returned the questionnaire to us please accept our sincere thanks. If not, please do so as soon as possible. Your contribution is essential and we are counting on your support.

I by some chance you did not received the questionnaire, or it got misplaced, please contact us in the address below and we will get another one in the mail today.

Thank you.

REMINDER LETTER

[date]

[first & last name]
[position]
[cooperative name & address]

Dear Sir:

About four weeks ago we wrote to you seeking your opinion about the highest priority competencies for presidents of cooperatives. As of today we have not yet received your completed questionnaire.

The Department of Agricultural and Extension Education at Michigan State University has undertaken this study because of the belief that your opinion as cooperative administrator is important.

We are writing to you, because of the significance each questionnaire has to this study. In order for the results of the study to be truly representative of the opinions of cooperative administrators it is essential that each person return the questionnaire.

You may be assured of complete confidentiality. The questionnaire has an identification number for statistical purposes only. Your name will never be placed in the questionnaire.

In the event that your questionnaire has been misplaced, a replacement is enclosed. We estimate that will take 15 to 20 minutes for completion of the questionnaire. Due to the limited time we have in Brazil to collect the research data, we ask you to return the completed survey as soon as possible.

Hope to hear from you soon. Thank you very much.

Cordially,

[Faculty' name & Signature] [Researcher' name & Signature]

APPENDIX C

WRITTEN COMMENTS

If there are any items we have not included, please note.

To define a philosophy of work, define mission, and have clear objectives.

Well Known, leadership, and hard work.

This cooperative was founded by japanese immigrants in 1934. Today 50% of the members are brazilian-japanese, and 50% brazilian of various origins. Our president has to know the social, economic, and political environment of this community.

Do not use the cooperative as a means to promote himself, do not mix politics with cooperative administration.

Be optimist, and believe in God.

The president should be honest, hard work, business-man, have cooperative spirit, and have no ambition for himself.

Training for the directors.

I am answering just the first part of the questionnaire because this cooperative will close in February due to lack of knowledge by te members about the philosophy and principles of cooperatives. Also, the agriculture crisis, and lack of government support contributed to force this organization out of business.

Creation of educative committees.

Be a financially successful in his private life. Do not depend economically from the cooperative salary, be honest and hard work, give the same treatment to large and small farmer.

Every cooperative have a tendency to grow, the administrator should hold back this development.

Adopt an organizational view of the business, impartial, and without paternalism.

Prioritize cooperative education, dedication, motivate the member to participate on cooperative issues.

Administrators should manage the organization according to the needs and wants of the members.

what do you consider the most important duties and responsibilities of a cooperative president?

Assiduity and good understanding of members and employees in order to make them feel supported.

Fulfill the social regulations.

Fulfill cooperative bylaws and regulations, and maintain a cooperative spirit.

Manage well, and enforce cooperative education.

To organize a responsible and hard working team.

To represent the organization, make sure that the board of directors are acquainted with the goals and objectives of the organization, as well as the organization rules. Have a plan on how to coordinate and execute the plans of the organization.

Political and administrative representativity.

Leadership, appearance, good management skills.

Knowledge in recruiting good executives; give opportunities for them to develop themselves and their work.

Be punctual, honest, and work in order to make the cooperative successful, defend the interest of the cooperative.

Be loyal to the cooperative members, and serve the cooperative.

Be yourself.

Be honest, take the initiative, possess decision making abilities, promote the economic and social development of the cooperative, have cooperative spirit.

To always apply the real cooperative spirit and philosophy, keep the members well informed about the cooperative activities and development, try to respond to every basic needs of the members.

Honesty, initiative and decision making abilities.

Hard work, perseverance, honesty.

Hard work, understanding, inspire trust of members and employees.

Honesty.

Dedicate time on cooperative issues, work together with other directors on all the problems of the cooperative, finding ways to solve them.

Assure that the bylaws and regulations of the organization are followed, and apply them for the good understanding between Directors, members, and employees.

Honest, hard work and have initiative.

Think logically, honesty, and have cooperative spirit.

Know and respect the cooperative bylaws.

Coordinate employees and members in order to make them as efficient as possible.

To promote the development of the cooperative responding to the expectations of its members through continuous leadership, logic and good relationship with everybody.

In addition to the ones specified in the bylaws, the president must administer the cooperative with democracy, honesty, and leadership, listening to his assistants and not with the political goals of re-election.

Assiduity, leadership, and honesty.

Work seriously, being honest, responsible, and professional, aware of his duties and obligations with the cooperative members.

Assure that the interests of the cooperative are being fulfilled, and supervise the cooperative activities.

Be responsible, honest, patient. It is essential to know how to guide members and have knowledge about agriculture in order to understand the cooperative's members and their needs. There are cases where the president has a university degree but does not know anything about agriculture.

Honesty and integrity.

Honesty, punctuality, and firmness when dealing with cooperative issues and development. Financial security.

Duties: Keep the cooperative on a solid base in three major

areas: politically well balanced, economically stable,

administratively well structured.

Responsibilities: assure the social and economic

responsibilities of the cooperative.

To listen and respond to the needs of members.

Duty: Try to motivate farmers to join the cooperative movement.

Responsibility: To represent well the cooperative members.

Fulfill the cooperative bylaws and philosophy.

Respect the cooperative assets', treat all members the same no matter their economic or social class.

To be in charge of his executive administration.

Serve as a model with dedication and hard work in order to show the team that they will grow with the cooperative.

Achieve all the objectives of the cooperative.

Preside the coop with equity (everybody the same).

Be aware that you are a president for a certain period of time and the cooperative is not your property, but it belongs to all the members to whom you are administering for a determined period of time.

Fulfill the bylaws, regulations, objectives, and have knowledge of what you are doing.

Ability to represent the cooperative and its members before governmental institutions and the community.

Maintain a certain social-economic position in order to assure the financial-economic stability of the cooperative without forgetting the members.

Motivate members to have a cooperative spirit. Direct the members' efforts to achieve their objectives.

Hard work and honesty.

The president should serve as a model to members, and there should be no question about his honesty.

Dedicated worker, planning for the development of the cooperative and fulfilling the obligation of the bylaws.

Keep track of the financial situation.

Value the opinions and work of other directors, and motivate their participation on the day-to-day-cooperative life.

Ability to prioritize, and be aware that he is a temporary administrator of collective property. He is not the owner of the organization.

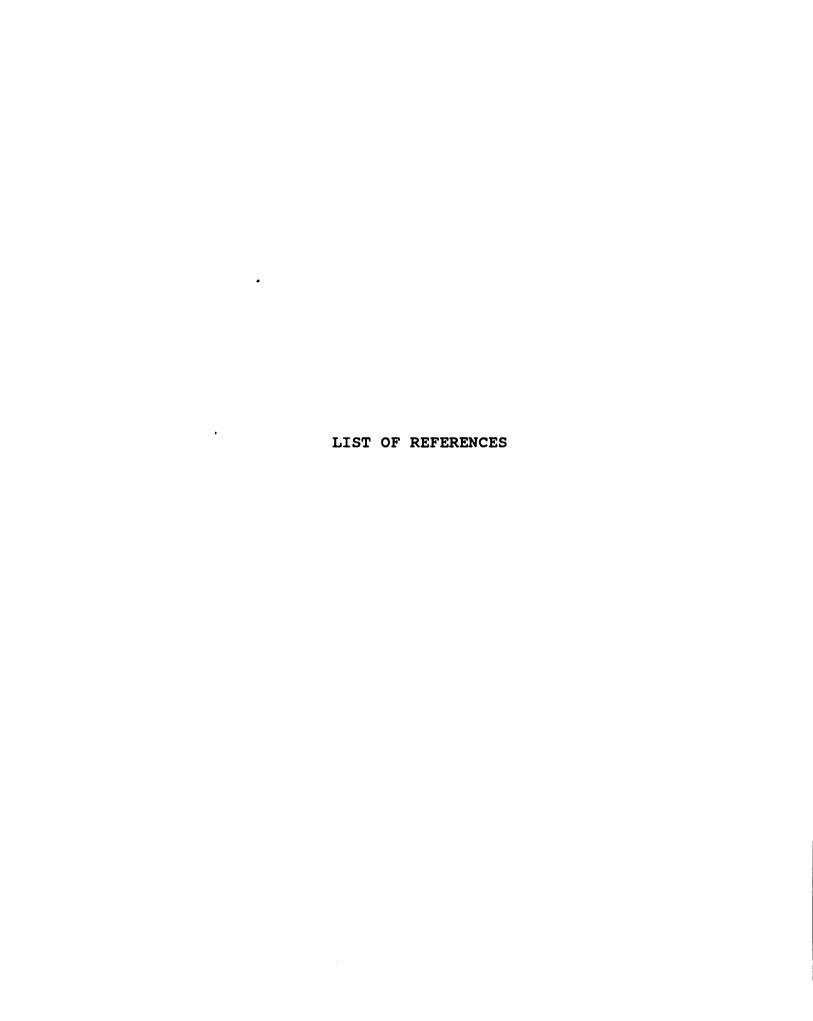

Honesty, dedication, impartiality.

The most important responsibility of the president is to effectively integrate the three vertices of the association: Administrators, Employees, and Members.

Be responsible for all decisions, be honest, communicate well, and be leader.
