#### **ABSTRACT**

A DESCRIPTIVE STUDY OF PERCEIVED PROFESSIONAL BENEFITS DERIVED FROM TEACHER INVOLVEMENT IN THE KENT PROFESSIONAL STAFF DEVELOPMENT CENTER, WITH A VIEW TOWARD DEVELOPING RECOMMENDATIONS FOR IN-SERVICE EDUCATION IN SAUDI ARABIA

By

#### Abdulhakeem Mousa Mubarak

The present study had two major purposes: (1) to examine the extent to which teachers are involved in the four governance processes of the Kent Professional Staff Development Center (KPSDC), namely, (a) needs assessment, (b) planning, (c) implementation, and (d) the policy board; and (2) to examine the teachers' perceptions of ways in which the in-service education provided by the teachers' center affects the teachers' classroom instruction. Furthermore, the researcher expected to be able to generate some recommendations regarding teachers' centers and in-service education in Saudi Arabia.

A survey of members of the KPSDC in Grand Rapids, Michigan, was conducted to gather information about the teachers' involvement in the activities and offerings of their center, as well as their perceptions of the benefits derived from this participation.

It was concluded that (1) the involvement in the various governance committees is relatively low and appears to be related principally to the level of the respondent's education, such that the more education members have, the more involved they tended to be in the

governance processes. (2) Additionally, the higher the education, the more benefits are perceived as deriving from participation in the center's activities, and (3) with increased involvement in the governance processes, the activities offered by the center are perceived as more beneficial. (4) Of the programs offered, workshops and lectures are most frequented by the respondents, are considered most helpful, and see most application in the classroom. (5) Activities having topics dealing with personal growth and the improvement of instructional skills are the ones most frequented, and (6) specific benefits of the participation in the center's activities are related to "learning from others," personal growth, and learning new teaching styles.

To the memory of my parents, as well as to Al-Sheik Yaquab Y. Shaker.

To my wife, Laila, and to my children, Wael, Alaa, and Manar, for their love and support.

To my father-in-law and his brothers, who encouraged me with their love and prayers.

#### **ACKNOWLEDGMENTS**

The design and execution of this study depended on and received the help and cooperation of many individuals. Although all deserve my appreciation and thanks, it will be difficult to remember them all.

Special gratitude and appreciation are extended to Dr. Charles A. Blackman, the chairman of the doctoral committee, for his continuous assistance, encouragement, understanding, and limitless patience.

The writer is grateful to the other members of the dissertation committee: Dr. Ben A. Bohnhorst, Dr. Patrick DeMarte, and Dr. Howard Hickey, for their cooperation, time, and contributions to the study.

Without the help and cooperation of the Kent Professional Staff Development Center, this work would not have been possible:
Barbara Bird, the director; Dr. George McMahon, consultant; Arlene Lanford, secretary; and the many KPSDC linkers between the center and the school districts.

Important assistance was received from the participants of Dr. Blackman's informal group for professional development, as well as from Dr. Robert C. Hatfield, through their thoughtful comments while thinking through my thesis. Special thanks go to Danford Austin and Ronald Crowell for their helpful suggestions. Likewise, I want to thank Dr. Hartmut Günther for his assistance with the statistical analysis of the data.

Last but not least, I want to acknowledge the moral and material support of many friends who knew me before I even thought of undertaking graduate work, and thank them for their confidence, encouragement, and support along this long path.

#### CHAPTER I

#### INTRODUCTION

#### Background of the Study

The inadequacies of in-service education have been well documented in many professional journals and speeches. Edelfelt and Lawrence described the present status of in-service education as follows:

In-service teacher education today bears a close resemblance to the concepts that have shaped it historically. It is usually required of teachers. Content and approach are prescribed by universities and school districts. Course credits are mandated by state department regulations and school district policies. Although intentions have usually been good, too often programs are low level, piecemeal, and patchwork. Teachers achieve advanced degrees, credits for salary increments, and higher levels of certification, but the effort yields too little in the improvement of teaching or school program. In fact, in-service education does not often deal directly with helping teachers improve their skills in instruction or become more adept at planning and organizing curriculum. In school district programs, the focus is on introducing new curriculums, beefing up existing programs, or following new fads and trends, typically at the supervisor's discretion. In formal graduate work, study is largely divorced from the specifics of the teacher's job. In-service education takes place on the teacher's own time and frequently at her or his expense. It is seldom based on teacher need and is often conducted in a manner that negates the principles of good teaching and learning.

Howey and Willie indicated educators' dissatisfaction with current in-service education practice. They wrote, "Public school

Roy Edelfelt and Gordon Lawrence, "In-service Education: The State of the Art," in Rethinking In-service Education, ed. Roy Edelfelt and Margo Johnson (Washington, D.C.: National Education Association, 1975), p. 14.

in-service training has more than a century of history, yet there is considerable dissatisfaction over current practice." Perhaps the dissatisfaction with current practice has evolved because there is a gap between in-service education programs and the critical problems of the schools. According to Goodlad,

Our study of sixty-seven elementary schools in the United States revealed a formidable gap between the inservice educational pursuits of teachers and the critical problems of the schools as identified in interviews with principals and teachers.<sup>2</sup>

Edelfelt and Lawrence also noted some of the deficiencies of in-service education. They concluded their article by saying,

In summary, in-service education has been the weakest and most haphazard component of teacher education. Even the most charitable would have to admit that it has not been nearly as effective as it might have been, considering the expenditure of time, effort, and resources. However, to say that in-service education has been inadequate is not to say that teachers can or want to do without it. During the 1974-75 school year, the NEA conducted assessments of teacher needs in instruction and professional development in 18 local school districts that were representative of the country in terms of size, geographical location, types of clients served, and urban/suburban/rural setting. Inadequacy of or interest in in-service education was one of three categories of concern to surface in every single district. The positive conclusion to be drawn from this information is that teachers want quality in-service education; they also recognize a significant discrepancy between what exists and what they would like.3

<sup>&</sup>lt;sup>2</sup>John Goodlad, "The Reconstruction of Teacher Education," Teachers College Record 72 (September 1970): 65.

<sup>&</sup>lt;sup>3</sup>Edelfelt and Lawrence, "In-service Education," p. 16.

## The Concept of the Teachers' Center

In the 1970s, the concept of teachers' centers emerged as a new hope for the professional development (in-service education) of teachers. Waskin stated, "The nature of Teachers' Centers now in existence seems to indicate that much of the renewal or in-service education of teachers might well become the responsibility of the teacher center."

The uniqueness of the teachers' center concept for professional development has attracted the attention of educators in Europe as well as in the United States. The idea spread to the United States from England in 1971.

Reports began coming to the United States from England telling about the establishing of "Teachers' Centers" for inservice education. One significant article by Stephen K. Bailey in the Phi Delta Kappan in November of 1971, entitled, "Teachers' Centers: A British First," was widely read in this country and is credited with igniting the spark that set many educators scurrying to establish their own teacher centers. It was estimated that within several months after the appearance of Bailey's article, almost 100 centers were already in operation in the United States.<sup>2</sup>

Schmieder and Yarger described the rapid development of teachers' centers:

The teacher or teaching center is one of the hottest educational concepts on the scene today . . . and that is no mean compliment, given the rapid ascendancy of career education, competency-based education, the open classroom, schools and universities without walls, and a myriad of other outstanding new education alternatives. It has been generally estimated

<sup>&</sup>lt;sup>1</sup>Yvonne Waskin, "The Teachers' Center Movement in the United States and Its Implications for Teacher Education" (Ph.D. dissertation, University of Michigan, 1976), p. 1.

<sup>&</sup>lt;sup>2</sup>Ibid.

that it takes over twenty years for a new innovation to work its way into the mainstream of American education. It has taken less than half a decade for the teaching center to become a well known locus for new approaches to educational personnel development.

The teachers' center is a powerful aspect of in-service education because its fundamental purpose is to involve teachers more directly in their own professional development. In addition, the teachers' center facilitates the sharing of classroom experiences and links teachers with new research findings and other important educational developments that may have implications for what they do in the classroom. <sup>2</sup>

Teachers come to the teachers' center to share new ideas and to seek new ways to teach their students; hence all participants in teachers' centers should be both learners and teachers. "The center should focus on needs as perceived by teachers, and the teachers should have the major voice in identifying persons and resources for meeting these needs."

# Statement of Purpose

The researcher had two major purposes in conducting this study:

(1) to examine the extent to which teachers are involved in needs

assessment, planning, and implementation of the teachers' center activities and (2) to examine teachers' perceptions of the ways in which the

Allen Schmieder and Sam Yarger, "Teacher/Teacher Centering in America," Journal of Teacher Education 25 (Spring 1974): 5.

<sup>&</sup>lt;sup>2</sup>Allen Schmeider and Charles Lovett, "Teacher Centering for Ongoing In-service Education," <u>Action in Teacher Education</u> 2 (Spring 1980): 1-7.

<sup>&</sup>lt;sup>3</sup>Ibid., p. 3.

in-service education provided by teachers' centers affects teachers' classroom instruction. The investigator also intended to generate recommendations for in-service teacher education in Saudi Arabia.

The locale for the study was the Kent Professional Staff
Development Center, located in Grand Rapids, Michigan. This Center
was chosen because it serves a variety of sizes of school districts
and a socioeconomic cross-section of community types. Access to the
Center was readily available to the researcher.

## Research Questions

This was a descriptive study. The investigator posed the following research questions in an attempt to generate the information needed to fulfill the purposes of the study:

- 1. To what extent are teachers involved in the needs-assessment process?
- 2. To what extent are teachers involved in the planning process?
- 3. To what extent are teachers involved in the developing and implementing processes?
- 4. To what extent are teachers involved in committees dealing with the governance of the teachers' center?
- 5. In what types of activities of the Kent Professional Staff Development Center (KPSDC) do the teachers participate?
- 6. What benefits did the teachers perceive in the activities/programs offered by the teachers' center?

- 7. Is there any relationship between active involvement in the committees and perceived benefit from the activities offered by the Center?
- 8. What recommendations can be generated from this study for in-service teacher education in Saudi Arabia?

# Importance of the Study

Edelfelt and Johnson defined in-service education of teachers as "any professional development activity that a teacher undertakes singly or with other teachers after receiving her or his initial teaching certificate and after beginning professional practice."

In-service education is important because it is designed to serve the needs of teachers and to improve their teaching.

Mangieri and McWilliams described the scope of in-service education as follows: "By in-service education we mean all activities engaged in by professional personnel during their service and designed to contribute to improvement on the job."<sup>2</sup>

Dissatisfaction with current in-service education has grown in recent years. In a 1974 study conducted by Brimm and Tollett, 73 percent of the teachers surveyed said that in-service activities often did not seem relevant to teachers' needs. 3

~

Roy Edelfelt and Margo Johnson, "Introduction," in <u>Rethinking In-Service Education</u>, ed. Roy Edelfelt and Margo Johnson (Washington, D.C.: National Education Association, 1975), p. 5.

<sup>&</sup>lt;sup>2</sup>John Mangieri and David McWilliams, "Designing an Effective In-Service Program," Journal of Teacher Education 27 (Summer 1976).

<sup>&</sup>lt;sup>3</sup>Jack L. Brimm and Daniel J. Tollett, "How Do Teachers Feel About In-service Education?" <u>Educational Leadership Research Supplement</u> (March 1974): 523.

Van Fleet noted that although needs-assessment teachers' center programs supposedly are directed toward teachers' expressed needs, these needs must be assessed. He found that most centers started programs without understanding the problems involved in needs assessment. In addition,

Traditionally, in-service education has been prescribed for teachers by others. Psychology supports the notion that learning is optimum when what is learned satisfies the needs of the learner. There is also research evidence that teacher involvement is crucial in change projects if success is to be expected.<sup>2</sup>

The preceding paragraphs indicate the lack of involvement of teachers in needs assessment and in planning in-service education activities. They also point out that to have successful in-service education, teachers must be involved in these processes. Much literature and some research have indicated that teachers' centers do, in fact, offer a valuable alternative to in-service education for public-school teachers because they actively involve the participants in their activities. As Schmieder and Lovett said, "The fundamental purpose of the teachers' center is to involve teachers more directly in their own professional development and to support their efforts to provide the best possible education for their students."

Most of the persons on policy boards in teachers' centers are teachers because this "may give teachers the dominant influence

<sup>&</sup>lt;sup>1</sup>Alanson A. Van Fleet, "Teacher Centers in Florida: A Case Study," School Review 85 (May 1977): 420.

<sup>&</sup>lt;sup>2</sup>Farwest Teacher Corps Network, <u>In-service Education:</u> <u>Criteria for Local Programs</u> (Bellingham: Western Washington State College Press, 1976), p. 11.

<sup>&</sup>lt;sup>3</sup>Schmieder and Lovett, "Teacher Centering for Ongoing In-service Education," p. 3.

in developing the program of a teachers' center. That is, it <u>may</u> be that teacher needs are assessed accurately and that the program grows from these assessed needs."

The present study was undertaken as a means of confirming this claim and of seeing to what extent teachers are involved in need assessment and in planning, designing, and implementing inservice education activities. A study of whether teachers' centers are a good alternative to having in-service education is important because "few research efforts have been undertaken to determine the types of in-service programs which would be most beneficial to teachers."<sup>2</sup>

The inadequacies of in-service education in Saudi Arabia have recently been expressed by several Saudi researchers, although Saudi educational authorities have often stressed the importance of in-service education because they believe such education is a continuous process in providing quality education to public-school students. Al-Ghamdi cited two articles from the educational policy in the Kingdom of Saudi Arabia (published in 1970) that deal with the professional development of Saudi teachers:<sup>3</sup>

Roy Edelfelt, "Federally Funded Teacher Centers: What Will They Become?" Action in Teacher Education 2 (Spring 1980): 19.

<sup>&</sup>lt;sup>2</sup>Brimm and Tollett, "How Do Teachers Feel About In-service Education?" p. 521.

<sup>&</sup>lt;sup>3</sup>Abdulrahim M. Al-Ghamdi, "The Professional Development of In-service Teachers in Saudi Arabia" (Ph.D. dissertation, Michigan State University, 1982), p. 17.

Article 170: Teacher training is a continuous operation. A plan is set up to train and rehabilitate professionally disqualified ones, and another plan is set up to re-orient and improve the standards of qualified ones.

<u>Article 171</u>: Teachers are given every opportunity to pursue academic training that qualifies them for higher posts in their fields of specialty.

In response to these articles, a one-year development program was established at Umm-al-Qura University and King Saud University to provide public-school principals with an opportunity for professional development that is supposed to increase their skills, knowledge, and personal growth. These programs started in 1972. Hariri wrote, "These programs have retrained 731 elementary and 388 intermediate and secondary school principals."

To indicate that the present training programs are less than adequate, Hariri cited Al-Zaid's findings: "Al-Zaid's study supported the fact that the present training programs were less than adequate."<sup>2</sup>

Al-Ghamdi expressed very clearly the dissatisfaction with current in-service education practices in Saudi Arabia:

It should be mentioned here that the Ministry of Education, in cooperation with the two major universities, has on-going programs to upgrade school administrators' skills and knowledge. These programs may not have been planned carefully and may not have been based on the needs of the participants. According to MOE (1980, p. 293), in-service training of teachers and headmasters was conducted with moderate success. In fact, many of those who have participated in in-service activities have expressed to this researcher their dissatisfaction

<sup>&</sup>lt;sup>1</sup>Hashim Hariri, "School Climate, Competency and Training of Principals in Intermediate Schools in Saudi Arabia" (Ed.D. dissertation, University of Northern Colorado, 1982), p. 14.

<sup>&</sup>lt;sup>2</sup>Ibid., p. 15.

with the programs, but said it was a good source of income, since they are paid to attend.

The preceding paragraphs indicate the following facts:

- 1. There is a sincere intention among the educational authorities in the Ministry of Education and educators in major universities to provide the teachers and school personnel in Saudi Arabia with professional-development activities that lead them to gain instructional skills, knowledge, and personal growth.
- 2. The Ministry of Education provides the teachers and school principals with released time and allowances to attend in-service activities.
- 3. Despite the aforementioned efforts, the current practice of in-service education is ineffective, as the studies of Hariri and Al-Ghamdi indicated.

Al-Ghamdi tried to explain why in-service activities in Saudi Arabia are ineffective or inadequate. He said:

Despite recognition of the importance of in-service training by the Saudi educational authorities, in-service activities afforded educational personnel--and specifically teachers--seem to lack direction, organization, and careful planning. In-service program activities appeared to be planned and conducted without forethought, as revealed in the interviews obtained by this researcher with some Saudi educational authorities. The same interviews also exposed that the participants' needs for whom in-service training activities are planned were not systematically assessed. Such needs, therefore, may have not been adequately realized.

Al-Ghamdi, "Professional Development of In-service Teachers," p. 18.

<sup>&</sup>lt;sup>2</sup>Ibid., pp. 145-46.

In 1971, the concept of teachers' centers for in-service education came from England to the United States. In the last decade, this concept has spread very fast because it has been thought to be successful. The teachers' center concept may be used to alleviate the in-service education problem in Saudi Arabia. Although Saudi Arabia has a different social structure, culture, religion, and education from the United States, it does not mean that Saudi Arabia cannot adapt and adopt the methods and concepts that have been used to tackle a problem common to both countries.

### Assumptions Underlying the Study

The assumptions underlying this study were as follows:

- 1. "Learning to teach and maintaining competence to teach is a continuous, never-ending process," and the continued growth in knowledge and skills of all teachers is a legitimate concern of school districts. This concern may be satisfied by providing in-service education for school personnel, which improves their job-related competencies and prepares them for new professional roles.
- 2. Teachers' centers are a very important aspect of in-service education and have been very successful in this process.
- 3. The role of teachers in the teachers' center activities is a major one because the teachers themselves are involved in planning and executing these activities. "If a central purpose of in-service education is school improvement, teachers must be involved."<sup>2</sup>

<sup>&</sup>lt;sup>1</sup>Farwest Teacher Corps Network, <u>In-service Education</u>, p. 16.

<sup>&</sup>lt;sup>2</sup>Ibid.

One of the inadequacies of in-service education is the lack of teacher involvement in planning and executing the activities, but in teachers' centers, teachers play positive and active roles.

#### Limitations

The study outcomes may be limited by the following:

- 1. The nature of the sampling process, including the procedures used to identify respondents.
- ?. The degree of understanding of the respondents concerning what "being involved" means.

#### Definition of Terms

To avoid semantic confusion or ambiguity in interpreting this study, the following terms are defined in the context in which they are used in this dissertation.

<u>Coordinator or director</u>: As used in this study, the coordinator or director is "the person who is in charge of the organization and operation of the teacher center."

<u>In-service education</u>: In-service education comprises the training programs or activities that help teachers maintain or improve their status within the profession. Teachers engage in these activities after they receive their teaching certificates and begin their professional practice.

<u>Professional development</u>: According to the Michigan Department of Education, professional development is "a planned and organized

Waskin, "The Teachers' Center Movement in the United States," p. 20.

effort to provide teachers and other educational workers with knowledge and skills necessary to facilitate improved student learning and performance."

<u>Teacher center</u>: The teachers' center is a place where teachers meet and exchange ideas and experiences. In this center the teachers assess their professional and personal needs, and they plan activities to satisfy these needs with the help of resource personnel.

#### Overview |

Chapter I contained the background of the study; an explanation of the teachers' center concept; the purposes, importance, and assumptions of the study; and definitions of terms used in the dissertation. Included in Chapter II is a review of related literature on in-service education, the teachers' center as an important aspect of in-service education, and the Kent Professional Staff Development Center in Grand Rapids, Michigan. The study design and methodology are discussed in Chapter III. Chapter IV contains the analysis of data gathered in the study. Findings, conclusions, and recommendations may be found in Chapter V.

<sup>&</sup>lt;sup>1</sup>Michigan Department of Education, Office of Professional Development, "Professional Development for School Staffs: The Michigan Approach" (Lansing: Michigan Department of Education, n.d.).

#### CHAPTER II

#### REVIEW OF RELATED LITERATURE

#### Introduction

Every nation wants to provide a high quality of education for its young people because the country's future depends on them. To provide high-quality education, educators must prepare qualified teachers who will help achieve the nation's educational objectives and goals. Educators in preservice institutions have done their best to prepare teachers, but certain forces require the continuity of the preparation process throughout a teacher's lifetime. Johnson said, "Three types of forces are making inservice education essential: social and economic, scientific and technological, and educational." Although there are some differences in the meanings given to in-service teacher education, staff development, and professional development, they have been used synonymously throughout this dissertation.

In this chapter, pertinent literature in the following areas is reviewed: (1) definition of in-service education; (2) the importance of in-service education; (3) the purposes, types, and characteristics of in-service education; (4) the teachers' center as an important

Margo Johnson, <u>Inservice Education: Priority for the '80s</u> (Syracuse, N.Y.: National Council of States on Inservice Education, 1980), p. 2.

aspect of in-service education, and (5) the Kent Professional Staff Development Center in Grand Rapids, Michigan.

#### Definition of In-service Education

A number of educators have described the characteristics and purposes of in-service education. Some of these definitions are the following:

Harris, Bessent, and McIntyre described in-service education as the "planned activities for the instructional improvement of professional staff members." According to Cane, in-service training includes "all those courses and activities in which a serving teacher may participate for the purpose of extending his professional knowledge, interest or skill. Preparation for a degree, diploma or other qualification subsequent to initial training is included within this definition."

Johnston stated that in-service education

may consist of carefully planned, sustained work over a lengthy period leading to a further qualification in the form of an advanced certificate, diploma, or higher degree; it may equally well be casual study, pursued irregularly in the evenings or during vacations, and in no sense leading to measurable recognition for purposes of salary or of promotion.<sup>3</sup>

<sup>&</sup>lt;sup>2</sup>Brian Cane, <u>In-service Training: A Study of Teachers' Views and Preferences</u>, Occasional Publication Series No. 22 (London: National Foundation for Educational Research in England and Wales, 1969), p. x.

<sup>&</sup>lt;sup>3</sup>D. J. Johnston, <u>Teachers' In-service Education</u> (New York: Pergamon Press, Ltd., 1971), p. 9.

Dillon-Peterson defined staff development as "a process designed to foster personal and professional growth for individuals within a respectful, supportive, positive organizational climate having as its ultimate aim better learning for students and continuous, responsible self-renewal for educators and schools."

## The Importance of In-service Education

No one would deny the importance of in-service education for school personnel. Burrello and Orbaugh stated, "We believe inservice education is an absolute necessity if schools are to develop their most important resource, their people." Research has indicated that there is a correlation between staff development and organization development; this means that whenever in-service education is provided for school personnel, the schools can provide better learning for students because

in-service training programs can be tied into the day-to-day development of instructional materials and programs, can serve the periodic and special needs of educators, can be employed for purposes of exposure to new equipment and materials and can be used to bring teachers and administrators/teachers and teachers/administrators and administrators together for purposes of social interaction/group training or the exchange of ideas and experiences.<sup>3</sup>

Betty Dillon-Peterson, "Staff Development/Organization Development-Perspective 1981," in <u>Staff Development/Organization Development</u>, ed. Betty Dillon-Peterson (Alexandria, Va.: Association for Supervision and Curriculum Development, 1981), p. 3.

<sup>&</sup>lt;sup>2</sup>Leonard Burrello and Tim Orbaugh, "Reducing the Discrepancy Between the Known and the Unknown in In-service Education," <u>Phi Delta</u> Kappan 63 (February 1982): 385.

<sup>&</sup>lt;sup>3</sup>Richard O. Peters, "Affecting Teacher Awareness and Attitudes: An Inservice Program Strategy for Rural Schools" (Bethesda, Md.: ERIC Document Reproduction Service, ED 114 225, 1975), p. 4.

Harris, Bessent, and McIntyre identified four reasons why in-service education is important. These are:

- 1. Pre-service preparation of professional staff members is rarely ideal and may be primarily an introduction to professional preparation rather than professional preparation as such.
- 2. Social and educational change makes current professional practices obsolete or relatively ineffective in a very short period of time. This applies to methods and techniques, tools, and substantive knowledge itself.
- 3. Coordination and articulation of instructional practices require changes in people. Even when each instructional staff member is functioning at a highly professional level, employing an optimum number of the most effective practices, such an instructional program might still be relatively uncoordinated from subject to subject and poorly articulated from year to year.
- 4. Other factors argue for in-service education activities of rather diverse kinds. Morale can be stimulated and maintained through in-service education and is a contribution to instruction in itself, even if instructional improvement of any dynamic kind does not occur.

# The Purposes of In-service Education

According to Peters, one of the purposes of in-service education is to provide practicing classroom teachers and building administrators with quality training that

- 1. develops their awareness of new practices and techniques.
- 2. exposes practitioners to the "how-to-do-its" of their profession.
- 3. provides social interaction situations.
- 4. allows for the exchange of ideas and experiences.
- 5. provides the opportunity for skill development/application.
- 6. provides for exposure to and interaction with new instructional equipment and materials.

1

Harris, Bessent, and McIntyre, <u>In-service Education</u>, pp. 3-4.

- 7. directly involves educators in the process of instructional program development.
- 8. provides the opportunity to use teachers/staff personnel/ administrators as resource people to other educators; using the resource person's expertise and skills in instructional situations.

Continuing the education of beginning teachers is another purpose of in-service education. Moffitt asserted,

Regardless of the quantity and quality of academic education received in a college or university, a teacher new to any given school system needs in-service education. . . .

The beginning teacher enters into a strange and completely new situation. For many, it is the first real job the teacher has had, with the responsibilities attached thereto. Everything is strange. Commonly, he is unacquainted with the other teachers, the principal, or the administrative or supervisory personnel. The students are strange, and often the community is one about which he has little knowledge.<sup>2</sup>

# Types of In-service Education

Yarger identified the following five types of in-service education:

- 1. <u>Job-embedded in-service education</u> is programming that occurs within the context of a teacher's fulfilling his/her assigned responsibilities. It is directly related to the provision of skills that can be translated into working with children, developing classroom materials, and/or planning curriculum.
- 2. <u>Job-related in-service education</u> is programming that is either directly or indirectly related to the provision of skills for the performance of a teacher's primary responsibility of instructing children. It may result in the acquisition of directly applicable skills, or it may provide content that, while not directly applicable, is clearly related. Job-related in-service training does not occur within the context of the instruction of children.

Peters, "Affecting Teacher Awareness and Attitudes," p. 4.

<sup>&</sup>lt;sup>2</sup>John C. Moffitt, <u>In-service Education for Teachers</u> (Washington, D.C.: The Center for Applied Research in Education, Inc., 1963), p. 6.

effort to provide teachers and other educational workers with knowledge and skills necessary to facilitate improved student learning and performance."

Teacher center: The teachers' center is a place where teachers meet and exchange ideas and experiences. In this center the teachers assess their professional and personal needs, and they plan activities to satisfy these needs with the help of resource personnel.

#### Overview

#### CHAPTER II

#### REVIEW OF RELATED LITERATURE

#### Introduction

Every nation wants to provide a high quality of education for its young people because the country's future depends on them. To provide high-quality education, educators must prepare qualified teachers who will help achieve the nation's educational objectives and goals. Educators in preservice institutions have done their best to prepare teachers, but certain forces require the continuity of the preparation process throughout a teacher's lifetime. Johnson said, "Three types of forces are making inservice education essential: social and economic, scientific and technological, and educational." Although there are some differences in the meanings given to in-service teacher education, staff development, and professional development, they have been used synonymously throughout this dissertation.

In this chapter, pertinent literature in the following areas is reviewed: (1) definition of in-service education; (2) the importance of in-service education; (3) the purposes, types, and characteristics of in-service education; (4) the teachers' center as an important

<sup>&</sup>lt;sup>1</sup>Margo Johnson, <u>Inservice Education: Priority for the '80s</u> (Syracuse, N.Y.: National Council of States on Inservice Education, 1980), p. 2.

aspect of in-service education, and (5) the Kent Professional Staff Development Center in Grand Rapids, Michigan.

#### Definition of In-service Education

A number of educators have described the characteristics and purposes of in-service education. Some of these definitions are the following:

Harris, Bessent, and McIntyre described in-service education as the "planned activities for the instructional improvement of professional staff members." According to Cane, in-service training includes "all those courses and activities in which a serving teacher may participate for the purpose of extending his professional knowledge, interest or skill. Preparation for a degree, diploma or other qualification subsequent to initial training is included within this definition."

Johnston stated that in-service education

may consist of carefully planned, sustained work over a lengthy period leading to a further qualification in the form of an advanced certificate, diploma, or higher degree; it may equally well be casual study, pursued irregularly in the evenings or during vacations, and in no sense leading to measurable recognition for purposes of salary or of promotion.<sup>3</sup>

<sup>&</sup>lt;sup>3</sup>Richard O. Peters, "Affecting Teacher Awareness and Attitudes: An Inservice Program Strategy for Rural Schools" (Bethesda, Md.: ERIC Document Reproduction Service, ED 114 225, 1975), p. 4.

Harris, Bessent, and McIntyre identified four reasons why in-service education is important. These are:

- 1. Pre-service preparation of professional staff members is rarely ideal and may be primarily an introduction to professional preparation rather than professional preparation as such.
- 2. Social and educational change makes current professional practices obsolete or relatively ineffective in a very short period of time. This applies to methods and techniques, tools, and substantive knowledge itself.
- 3. Coordination and articulation of instructional practices require changes in people. Even when each instructional staff member is functioning at a highly professional level, employing an optimum number of the most effective practices, such an instructional program might still be relatively uncoordinated from subject to subject and poorly articulated from year to year.
- 4. Other factors argue for in-service education activities of rather diverse kinds. Morale can be stimulated and maintained through in-service education and is a contribution to instruction in itself, even if instructional improvement of any dynamic kind does not occur.

# The Purposes of In-service Education

According to Peters, one of the purposes of in-service education is to provide practicing classroom teachers and building administrators with quality training that

- 1. develops their awareness of new practices and techniques.
- 2. exposes practitioners to the "how-to-do-its" of their profession.
- 3. provides social interaction situations.
- 4. allows for the exchange of ideas and experiences.
- 5. provides the opportunity for skill development/application.
- 6. provides for exposure to and interaction with new instructional equipment and materials.

Harris, Bessent, and McIntyre, <u>In-service Education</u>, pp. 3-4.

- 7. directly involves educators in the process of instructional program development.
- 8. provides the opportunity to use teachers/staff personnel/ administrators as resource people to other educators; using the resource person's expertise and skills in instructional situations.

Continuing the education of beginning teachers is another purpose of in-service education. Moffitt asserted,

Regardless of the quantity and quality of academic education received in a college or university, a teacher new to any given school system needs in-service education. . . .

The beginning teacher enters into a strange and completely new situation. For many, it is the first real job the teacher has had, with the responsibilities attached thereto. Everything is strange. Commonly, he is unacquainted with the other teachers, the principal, or the administrative or supervisory personnel. The students are strange, and often the community is one about which he has little knowledge.<sup>2</sup>

#### Types of In-service Education

Yarger identified the following five types of in-service education:

- 1. <u>Job-embedded in-service education</u> is programming that occurs within the context of a teacher's fulfilling his/her assigned responsibilities. It is directly related to the provision of skills that can be translated into working with children, developing classroom materials, and/or planning curriculum.
- 2. Job-related in-service education is programming that is either directly or indirectly related to the provision of skills for the performance of a teacher's primary responsibility of instructing children. It may result in the acquisition of directly applicable skills, or it may provide content that, while not directly applicable, is clearly related. Job-related in-service training does not occur within the context of the instruction of children.

<sup>&</sup>lt;sup>1</sup>Peters, "Affecting Teacher Awareness and Attitudes," p. 4.

<sup>&</sup>lt;sup>2</sup>John C. Moffitt, <u>In-service Education for Teachers</u> (Washington, D.C.: The Center for Applied Research in Education, Inc., 1963), p. 6.

- 3. Professionally-related in-service education focuses on those aspects of a teacher's role which are clearly required, but are not directly related to the instruction of children. In every sense, however, they relate to "professional" attributes which generally differentiate teachers from others who work in schools. Such training might focus on parent conferences, community-based education programs, legally mandated record keeping, and a long list of professionally related responsibilities.
- 4. Mobility-related in-service education is primarily designed to prepare the teacher to assume a new position and/or obtain a new credential. Although usually related to "upward" mobility, it need not be. Programs that facilitate the transition from provisional to permanent certification and from teacher to administrator, and from teacher to specialist, are common examples of this kind of in-service education.
- 5. Personally-related in-service education is characterized by its emphasis on helping the participant become a more effective person rather than a more effective professional. Implicit in this type of in-service is that the more secure and well-adjusted a person is, the better teacher that person will be. Typically, this type of in-service programming will be self-selected and on occasion even self-directed.

Howey also identified several basic types of in-service edu-

## cation. They are as follows:

- 1. transitional (from pre- to in-)
- 2. comprehensive school renewal/role reorientation
- content or skill-specific development
- 4. personal growth
- 5. continuing graduate level education
- 6. general professional development
- 7. career progression<sup>2</sup>

Sam J. Yarger, "In-service Education and Teacher Centers," in <u>Teacher Centers</u>, Commissioner's Report on the Education Professions, 1975-76. Washington, D.C.: Government Printing Office, 1977), pp. 21-22.

<sup>&</sup>lt;sup>2</sup>Kenneth R. Howey, "Putting Inservice Teacher Education Into Perspective," Journal of Teacher Education 27 (Summer 1976): 102.

#### Hatfield and Ralston indicated that

the growth of the professional educator involves three aspects: (1) human growth, (2) growth in competence to carry out the educator's role, and (3) growth as training to implement reform decided on by the persons responsible for the shape of the school in which the educator works.

#### Characteristics of Successful In-service Education

Burrello and Orbaugh listed five major characteristics of effective in-service programs:

- 1. Inservice education should be designed so that programs are integrated into and supported by the organization within which they function.
  - Inservice education should be an integral part of the total school program.
  - Programs of inservice education should be explicitly supported at the outset by district and building administrators.
- Inservice education programs should be designed to result in collaborative programs.
- 3. Inservice education programs should be grounded in the needs of the participants.
  - Inservice programs should respond to assessed needs, including the interests and strengths of participants.
  - The development of problem-solving skills should be made a part of inservice training.
- 4. Inservice education programs should be responsive to changing needs.
  - The design of inservice programs should be complex and ambitious.
  - Each person is often his or her own most competent trainer.
  - Inservice education should model good teaching.
  - Trainees should make use of peer-teaching strategies.
  - The content should be directed toward changing teaching, not changing student behavior.

Robert C. Hatfield and Sherry Ralston, "Professional Assessment and Development" (paper presented at the Annual ATE Convention, 1978), p. 14.

- The implementation strategy should include <u>continual</u> professional growth activities and the <u>local</u> development of collaboratively prepared materials.
- Outside agencies or consultants may be helpful in supportive roles, especially as catalysts during start-up or as process helpers during times of crisis or stalemates.
- 5. Inservice education activities should be evaluated over time and be compatible with the underlying philosophy and approach of the district.
  - The evaluation of inservice education should be a collaborative venture whose primary purpose is to assist with the planning and implementing of programs.
  - Decisions concerning the in-service education program should be based on the findings from continuing program evaluation by program participants and others affected by the program.
  - The evaluation design should address planning, implementation, and dissemination.
- Lawrence et al. identified seven major characteristics of successful in-service education:
  - 1. Individualized inservice education tends to be better than single offerings for large groups.
  - 2. Active involvement in inservice programs tends to be better than passive-receptive involvement.
  - 3. Demonstration of skills with supervised feedback tends to be better than the provision of skills to be stored for future use.
  - 4. Teacher-help-teacher inservice tends to be better than teacher-work-alone inservice.
  - 5. Inservice that is integrated into a large program tends to be more effective than one-shot affairs.
  - 6./ Inservice that has an emerging design with teacher input tends to be better than totally preplanned inservice.
  - 7. Self-initiated inservice tends to be more effective than self-prescribed inservice.<sup>2</sup>

<sup>&</sup>lt;sup>1</sup>Burrello and Orbaugh, "Reducing the Discrepancy," pp. 385-86.

<sup>&</sup>lt;sup>2</sup>Gordon Lawrence et al., <u>Pattern of Effective Inservice Education</u> (Tallahassee: Florida Department of Education, 1974); cited in <u>Yarger</u>, "Inservice Education and Teacher Centers," p. 24.

# The Teachers' Center as an Important Aspect of Professional Development (In-service Education)

The inadequacies of in-service education activities have forced educators in the United States to look for new delivery systems, methods, and approaches to make in-service education activities more meaningful for public-school personnel. As a result of that research, a British innovation, the teachers' center, was adopted. An American educator, Arline Julius, wrote about this search:

Along with college colleagues, I have struggled to develop a teaching center in an impoverished area of the South Bronx in New York City. Last spring I visited Britain, studying for six weeks what has been widely publicized as a successful teacher center movement. I gathered some insights that may be helpful in attempts to establish teacher centers in the United States.

This clearly indicates that the concept of teachers' centers evolved in Great Britain and was later espoused by educators in the United States.

Writing about the evolution of these centers, Bailey said,

Perhaps the most significant potential British contribution to American education . . . is only now being identified and discussed: the development of teachers' centers. British experience with these centers, at least in their present form, is a matter of three or four years only. But the idea is so simple, so obvious, so psychologically sound, as to make one wonder why teachers' centers have not dotted the educational landscape for decades.<sup>2</sup>

# What Is a Teachers' Center?

Bailey defined the teachers' center as follows:

Arline Julius, "British Teacher Centers: Practical Applications for America," Phi Delta Kappan (November 1976): 250.

<sup>&</sup>lt;sup>2</sup>Stephen Bailey, "Teachers' Centers: A British First," Phi Delta Kappan (November 1971): 146.

Teachers' centers are just what the term implies: local physical facilities and self-improvement programs organized and run by the teachers themselves for purposes of upgrading educational performance. Their primary function is to make possible a review of existing curricula and other educational practices by groups of teachers and encourage teacher attempts to bring about changes.

Schmeider and Yarger defined the teachers' center somewhat more broadly than Bailey did:

A teacher center is a place, <u>in situ</u> or a changing location, which develops programs directed at the improvement of classroom instruction in which the participating personnel have an opportunity to share successes, to utilize a wide range of educational resources, and to receive training specifically related to the most pressing instructional problems. Programs are primarily for inservice teachers-but may involve other kinds of educational personnel as they relate to the improvement of classroom instruction--and usually serve both individual and system-wide needs.<sup>2</sup>

#### Why Teachers' Centers?

Schmieder and Yarger identified the following reasons for establishing and/or maintaining teachers' centers:

- 1. Search for ways to link more effectively the preservice and in-service training of educational personnel.
- 2. Search for more systematic and effective in-service training of educational personnel.
- 3. Search for ways to integrate more effectively curriculum development and staff development.
- 4. Search for more effective systems of introducing preservice teachers into the schools.
- 5. New emphasis on continuous teacher training--from the time of career choice until retirement.

l<sub>Ibid</sub>.

<sup>&</sup>lt;sup>2</sup>Yarger, "In-service Education and Teacher Centers," p. 29; a first version of this definition appeared in Allen A. Schmieder and Sam J. Yarger, "Teacher/Teaching Centering in America," <u>Journal</u> of Teacher Education 25 (Spring 1974).

- Search for new and more effective ways to share experiences and resources better among generally noncommunicating educational constituencies (students, teachers, administrators, supervisors, college and university staff, interested community).
- 7. Strongly advocated by a number of important educational writers, e.g., Silberman, Bailey, James.
- 8. Support of pilot programs (especially of British Model) by Ford, Carnegie, and other foundations.
- Recommendation by Task Force '72 of U.S. Office of Education (USOE) that the concept is one of the five most promising new ones in teacher education.
- 10. Positions of National Education Association, American Federation of Teachers, and United Federation of Teachers, who have strongly supported the concept, developed a number of position papers on the subject, and started a number of demonstration centers.
- 11. Recommendation (in one form or another) by both the Teachers' and Higher Education National Field Task Forces on the Improvement and Reform of American Education that the teaching center is the best route to better staff training.
- 12. Increasing commitment of the education profession to find better ways continually to upgrade and review the qualifications of all educational personnel.

Mertens further endorsed the concept of teachers' centers.

#### She wrote:

Teacher Centers are propelled by a sincere commitment to meet the needs of teachers as they are perceived by teachers. Most importantly, however, Teacher Centers appear to have the potential of delivering on this commitment through flexible structures and without institutional constraints. Teacher Centers have the potential to give teachers what teachers believe they need, when and where they believe it to be appropriate.<sup>2</sup>

Allen A. Schmieder and Sam J. Yarger, <u>Teaching Centers:</u>
<u>Toward the State of the Scene</u>, 2nd ed. (Washington, D.C.: American Association of Colleges for Teacher Education, 1975), pp. 4-5.

<sup>&</sup>lt;sup>2</sup>Sally Mertens, "On the Way to Describing the Federal Teacher Centers Program," Action in Teacher Education 2 (Spring 1980): 42.

# Teachers' Involvement and Adult Learning Concepts

Successful in-service programs can be developed if the involvement of the teachers who participate in such programs is increased.

Baden wrote,

Because many teachers have had unsatisfactory experiences with professional or inservice activities in the past, it is critical that teachers be involved in the identification and articulation of their own training needs. When teachers are involved in enunciation and organization of training activities, conditions are enhanced for peer support, shared effort, and eventual utilization of new insights and skills.

Teachers are adult learners in any in-service education activity; they can learn from each other as well as from the educators who are involved in these activities as resource personnel and as facilitators. Because teachers are adult learners, adult-learning concepts should be used in their in-service activities, which will make these activities more effective.

One of the concepts involved in adult education is andragogy, "the art and science of helping adults learn." Knowles explained the assumptions on which andragogy is based:

Andragogy is premised on at least four crucial assumptions about the characteristics of adult learners that are different from the assumptions about child learners on which traditional pedagogy is premised. These assumptions are that, as a person matures, (1) his self-concept moves from one of being a dependent personality toward one of being a self-directing human being; (2) he accumulates a growing reservoir of experience that becomes

Donald J. Baden, "Developing and Implementing a Teacher Directed X Professional Development Model" (Bethesda, Md.: ERIC Document Reproduction Service, ED 121 730, February 1976), p. 2.

<sup>2</sup>Malcolm S. Knowles, The Modern Practice of Adult Education: Andragogy Versus Pedagogy, 8th ed. (New York: Association Press, 1977), p. 39.

an increasing resource for learning; (3) his readiness to learn becomes oriented increasingly to the developmental tasks of his social roles; and (4) his time perspective changes from one of postponed application of knowledge to immediacy of application, and accordingly his orientation toward learning shifts from one of subject-centeredness to one of problem-centeredness.

Knowles indicated why learning activities for adults should be self-directed:

[The adult] sees himself as being able to make his own decisions and face their consequences, to manage his own life. In fact, the point at which a person becomes an adult, psychologically, is that point at which he perceives himself to be wholly self-directing. And at that point he also experiences a deep need to be perceived by others as being self-directing.

For this reason, adults have a need to be treated with respect, to make their own decisions, to be seen as unique human beings. They tend to avoid, resist, and resent situations in which they feel they are treated like children-being told what to do and what not to do, being talked down to, embarrassed, punished, judged. Adults tend to resist learning under conditions that are incongruent with their self-concept as autonomous individuals.<sup>2</sup>

According to Knowles, certain principles are very important in adults' learning activities. These are:

- Adults are motivated to learn as they experience needs and interests that learning will satisfy; therefore, these needs and interests are appropriate starting points for organizing adult learning activities.
- 2. Adult orientation to learning is life-centered; therefore, the appropriate units for organizing adult learning are life situations, not subjects.
- 3. Experience is the richest resource for adult learning; therefore, the core methodology of adult education is the analysis of experience.
- 4. Adults have a deep need to be self-directing. Therefore, the role of the teacher is to engage in a process of mutual inquiry rather than to transmit knowledge to them and then evaluate their conformity to it.

<sup>&</sup>lt;sup>1</sup>Ibid. <sup>2</sup>Ibid., p. 40.

5. Individual differences among people increase with age; therefore, adult education must make optimal provision for differences in style, time, place, and pace of learning.

Because the preceding principles are important in adult-learning activities, they should be used in in-service education.

Some educators who have been involved in professional-development activities for a long time have asserted that teachers must have an active role in such activities. They also have recommended the use of adult-education concepts in some preservice activities. Edelfelt supported this viewpoint by stating,

Schools of education need to give attention to adult learning. If schools of education personnel are to help teachers and other professionals in schools, they have got to develop new ways to treat and associate with school personnel. College professors cannot continue to treat school personnel like children, or like students in the traditional sense. I make this argument not only because professors can no longer defend the status of such a relationship, but, more important, because that relationship is unsound psychology. Mature school personnel will not respond to--nor will they learn much from--professors who expect or demand conformity, subservience, and deference.<sup>2</sup>

Edelfelt and Lawrence identified some patterns of effective in-service education, which contain some of the concepts of adult education. These are as follows:

1. In-service education programs that place the teacher in an active role (constructing and generating materials, ideas, and behavior) are more likely to accomplish their objectives than are programs that place the teacher in a receptive role.

Malcolm S. Knowles, The Adult Learner: A Neglected Species (Houston: Gulf, 1978); cited in Richard H. Bents and Kenneth R. Howey, "Staff Development--Change in the Individual," in <a href="Staff Development/Organization Development">Staff Development/Organization Development</a>, ed. Betty Dillon-Peterson (Alexandria, Va.: Association for Supervision and Curriculum Development, 1981), p. 33.

<sup>&</sup>lt;sup>2</sup>Roy A. Edelfelt, "The School of Education and Inservice Education," Journal of Teacher Education 28 (March-April 1977): 12.

- 2. Teachers are more likely to benefit from in-service programs in which they can choose goals and activities for themselves, as contrasted with programs in which the goals and activities are preplanned.
- 3. Inservice education programs in which teachers share and provide mutual assistance to each other are more likely to accomplish their objectives than are programs in which each teacher does separate work.
- 4. In-service education programs that have differentiated training experiences for different teachers (that is, "individualized") are more likely to accomplish their objectives than are programs that have common activities for all participants.
- 5. School-based programs in which teachers participate as helpers to each other and planners of in-service activities tend to have greater success in accomplishing their objectives than do programs which are conducted by college or other outside personnel without the assistance of teachers.

# Importance of Teachers' Involvement in Needs Assessment

Needs assessment is the first step in developing a teachers' center program, and as such it is very important. "Planning is based on an assessment of teacher training needs conducted by each center."<sup>2</sup>

A sound needs assessment can be carried out by using several approaches; some of these are the following:

1. Survey questionnaires: "Each teacher is asked to report which of several teaching skills and subject matter competencies they feel most knowledgeable about and those in which they feel most in need of training. The survey results are then used to determine what kinds of training should be offered."

Roy Edelfelt and Gordon Lawrence, "In-service Education: The State of the Art," in <u>Rethinking In-service Education</u>, ed. Roy Edelfelt and Margo Johnson (Washington, D.C.: National Education Association, 1975), pp. 18-19.

Alanson A. Van Fleet, "Teacher Centers in Florida: A Case Study," School Review 85 (May 1977): 417.

<sup>&</sup>lt;sup>3</sup>Ibid.

- 2. Individual requests: The director and/or the personnel of the center may receive special requests from a teacher or groups of teachers.
- 3. Interviews with individual teachers or groups of teachers by teachers' center personnel: "Interviews with individual teachers or groups of teachers can provide insight and information for needs assessment."<sup>2</sup>
- 4. Observation: "Observation takes many forms: teacher or student self-observation, observation of students by teachers or others, and observation of teachers by supervisors, or advisors. To be useful, observation should focus on both students and teachers."
- 5. Small-group discussions: A group of teachers can conduct discussions that help clarify some of their needs for in-service education.

Using these approaches, data are generated concerning teachers' needs for in-service education. Teachers must be involved in collecting and analyzing the data; they must also be included in setting priorities of needs. As Luke stated, "An intrinsic part of the needs assessment process is gathering data on the delivery system teachers

<sup>&</sup>lt;sup>1</sup>Ibid., p. 418

Assessment (Washington, D.C.: National Foundation for the Improvement of Education, Teacher Center Project, and National Education Association, Division of Instruction and Professional Development, 1980), p. 4.

<sup>&</sup>lt;sup>3</sup>Ibid., p. 3.

perceive to be most effective in making available to them the skills and information they require."

# Importance of Teachers' Involvement in Planning and Designing Activities of the Center

The second important step in developing a teachers' center program is the planning process. Each teachers' center should have a planning committee composed of teachers, administrators, and center personnel. Luke indicated that it is important for this committee to (1) clarify participants' responsibilities, (2) be clear about the task, (3) review how adults learn, and (4) think about motivation. He also stated that the second component of the planning function would involve the following tasks: (1) reviewing needs-assessment data, (2) writing a problem statement, and (3) previewing training materials. <sup>2</sup>

Luke indicated that four tasks, therefore, confront the planning committee in the beginning stages of program design:

- 1. Identifying learning strategies appropriate to the need to be met and the time available for in-service.
- Searching available program materials to uncover a useful range and variety of in-service education strategies.
- 3. Inventing new strategies when the materials at hand fail to supply what is required.
- 4. Adapting, revising, and arranging learning strategies into a workable sequence. 3

Robert A. Luke, <u>Teacher Centered In-service Education: Planning and Products</u> (Washington, D.C.: National Education Association, 1980).

<sup>2&</sup>lt;sub>Thid.</sub> 3<sub>Ibid.</sub>

Gmelch, Rose, and Erickson indicated that involving teachers in planning will result in successful in-service education activities. They wrote, "The development of a successful inservice program many times is contingent upon the involvement of participants in the planning. A close relationship exists between involvement in an enterprise and the commitment to its goal."

Teachers can be involved in the following activities:

- 1. identifying the content of teacher professional-development programs (in-service education).
  - 2. suggesting programs for professional development.
- 3. suggesting speakers or presenters for professional-development programs.
- 4. writing mini grant proposals for projects of teachers' design.

# Importance of Teachers' Involvement in Implementation of the Activities

Teachers should play an active role in implementing teachers' center activities because

teachers come to a good Teacher Center to give as well as to take; they come bringing energy and expertise as well as questions and problems. . . . The center is a place to share successes, to practice teaching adults—other teachers—as well as children.<sup>2</sup>

Walter H. Gmelch, Robert L. Rose, and Kenneth A. Erickson, "R<sub>X</sub> for Professional Growth: Inservice Education," OSSC Bulletin (Oregon: Oregon School Study Council, n.d.), p. 10.

<sup>&</sup>lt;sup>2</sup>Kathleen Devaney, "Ingredients of Teacher Centers' Uniqueness," <u>Action in Teacher Education</u> 2 (Spring 1980): 46.

## The Kent Professional Staff Development Center

The Kent Professional Staff Development Center was created in 1977 by the Kent Intermediate School District in Grand Rapids, Michigan. This center serves 35 school districts and provides

professional growth opportunities for more than six thousand professional personnel within Kent and Ionia Intermediate School Districts. The center brings together representatives from teachers' groups, administrators, school boards, colleges, and universities to identify needs, establish priorities, and plan and implement programs to improve staff competencies and skills that will result in improved learning experiences for students.

#### Purposes of the Center

The Kent Center has three major purposes:

- To provide teachers and other educational workers with knowledge and skills to facilitate improved student learning and performance commensurate with individual student incentive and potential.
- 2. To provide teachers and other educational workers with knowledge and skills to meet additional development needs of students.
- 3. To meet the specific needs of professional staff that may or may not be related to cognitive outcomes in students.<sup>2</sup>

#### Goals of the Center

The Kent Center has five major goals. These are:

- 1. To establish a two-way dissemination/communication linkage from building, through system, to Center.
- 2. To establish a bank of resource personnel to be used in implementing programs.
- To design, implement, and evaluate programs based on priority needs.

<sup>&</sup>lt;sup>1</sup>Kent Professional Staff Development Center, "Final Report, October 1, 1980-September 30, 1981" (Grand Rapids, Mich.: Kent Intermediate School District, 1981), p. 4.

<sup>&</sup>lt;sup>2</sup>Ibid., p. 3.

- 4. To establish a coordination between services available in existing projects and agencies and identified needs.
- 5. To establish an on-going needs-assessment process.

#### Staff of the Center

The staff of the Kent Professional Staff Development Center comprises a director, a consultant, and a secretary. They have eight major responsibilities:

- 1. To assist local districts in planning effective staff-development programs.
- 2. To assist local districts in identifying material and human resources.
- 3. To design and coordinate an on-going needs-assessment process.
- 4. To coordinate the evaluation of staff-development activities.
- 5. To maintain records of staff-development activities.
- To coordinate the Committee of Twenty-Eight [local schooldistrict linkers].
- 7. To make recommendations for staff-development programs to the Policy Board.
- 8. To deliver staff-development programming which meets the generic needs of the service area.<sup>2</sup>

#### The Policy Board

The Kent Center is governed by an 18-member Policy Board.

Three individuals are ex-officio members and cannot vote. Of the 15 voting members, eight are classroom teachers. The responsibilities of the Policy Board are as follows:

- To identify the broad goals and objectives for staffdevelopment efforts.
- 2. To coordinate professional-development activities.
- 3. To approve programming of interest to the entire service area.

<sup>&</sup>lt;sup>1</sup>Ibid. <sup>2</sup>Ibid., p. 6.

- 4. To endorse Kent Professional Staff Development Center staffing.
- 5. To evaluate the effectiveness of programs. 1

#### Local District Linkers

Each school district has a communication linker selected by the school. "These people [have] important responsibilities in keeping the center aware of needs in that school district as well as assisting in acquainting personnel in their district with professional-development opportunities."

#### Summary

In-service education is a continuous process in the preparation of classroom teachers; as such, it is a very important factor in providing better education for students. The inadequacies of in-service education have forced educators in colleges and public schools to look for new delivery systems, methods, and approaches. The concept of the teachers' center has emerged as a new delivery system, as well as engendering new methods and approaches to in-service education.

The review of related literature has indicated that in order to provide successful in-service activities, the teachers should be actively involved in the governance processes, namely, needs assessment, planning, implementation, and policy board activities, because it involves the teachers more directly in their own professional-development activities. The unique quality of the teachers' center is that it involves

<sup>&</sup>lt;sup>1</sup>Ibid., p. 7. <sup>2</sup>Ibid.

the teachers in planning, it applies some learning and teaching theories, and it employs some concepts of adult education.

In this review of related literature, the writer attempted to build a conceptual framework toward developing recommendations for in-service education in Saudi Arabia. The recommendations generated by the writer are set forth in Chapter V.

#### CHAPTER III

#### RESEARCH DESIGN AND PROCEDURE

#### Introduction

The investigator employed a survey to describe teachers' involvement in the Kent Professional Staff Development Center (KPSDC) and to describe the ways in which the in-service education provided by the KPSDC affects teachers' classroom instruction.

According to Borg and Gall, "descriptive studies typically employ either survey or observational research methods. Their purpose is to collect information that permits us to describe the characteristics of persons or an educational process or an institution."

In this chapter, the major research questions are presented. A description of the population and sample of the study, a description of the instrument and how it was distributed, and the methods used in analyzing the data are also included.

#### Research Questions

This was a descriptive study. The investigator posed the following research questions in an attempt to generate the information needed to fulfill the purposes of the study:

Nalter R. Borg and Meredith Damien Gall, Educational Research: An Introduction (New York: Longmans, Inc., 1979), p. 38.

- 1. To what extent are teachers involved in the needs-assessment process?
- 2. To what extent are teachers involved in the planning process?
- 3. To what extent are teachers involved in the developing and implementing processes?
- 4. To what extent are teachers involved in committees dealing with the governance of the teachers' center?
- 5. In what types of activities of the Kent Professional Staff Development Center (KPSDC) do the teachers participate?
- 6. What benefits did the teachers perceive in the activities/programs offered by the teachers' center?
- 7. Is there any relationship between active involvement in the committees and perceived benefit from the activities offered by the Center?
- 8. What recommendations can be generated from this study for in-service teacher education in Saudi Arabia?

# Population and Sample of the Study

The Kent Professional Staff Development Center serves 6,000 public-school personnel representing 35 school districts in the Kent and Ionia Intermediate School Districts. Since the entire population comprised 6,000 individuals, the investigator, after consultation with and direction from his chairperson, decided to take 300 members of the population as a sample for this study. Therefore, he decided to administer the questionnaire to a random sample of 300 elementary, middle school, and high school teachers in Kent and Ionia Intermediate

School Districts. A total of 161 questionnaires (53 percent) was returned.

## The Survey Instrument

To fulfill the purposes of this study, the investigator developed a questionnaire because existing questionnaires were not designed to gather the information needed in this study. The instrument was developed to gather the following data:

- 1. Demographic data.
- 2. Committees existing in the Kent PSDC and teachers' involvement in such committees.
- 3. Needs-assessment process in Kent PSDC and teachers' involvement in such process.
- 4. Teachers' involvement in planning and implementing the activities of the Kent PSDC.
- 5. Activities teachers participate in, their quality as perceived by teachers, and their effect on classroom instruction.
- 6. The types of benefits that can be derived from the activities or programs offered by the Kent PSDC.
- 7. Comments about and recommendations for improvement of the Kent PSDC programs.

#### Demographic Data

To gather demographic information, the following ten questions were included in the questionnaire:

| 1. | Please<br>distric | indicate<br>ct. | the | name | of | your | school | and | of | your | schoo |
|----|-------------------|-----------------|-----|------|----|------|--------|-----|----|------|-------|
|    | School:           |                 |     |      |    |      |        |     |    |      |       |
|    | Distric           | t:              |     |      |    |      |        |     |    |      |       |

| 2.  | Please indicate the number of years (including this one) that you have taught years  |
|-----|--|
| 3.  | What is your major teaching assignment?  1. Elementary 2. Junior high/middle school 3. Senior high   |
| 4.  | What subject fields do you teach? Please check appropriate field(s) and indicate grade level taught (e.g., Math: 5,7).  1. Math 2. Science 3. Social studies 4. Language arts 5. Industrial arts 10. Other (specify) |
| 5.  | Highest degree held: College major:  |
| 6.  | Year graduated from college: 19 Institution:   |
| 7.  | In case of graduate study, please indicate field of study and year completed:  |
| 8.  | Type of teaching certificate  1. Provisional 3. Continuing 2. Permanent 4. Other (specify)   |
| 9.  | Year of birth: 19  |
| 10. | Sex: Male Female   |

Questions 2 (teaching experience), 3 (major teaching assignment), 4 (teaching subject fields), 5 (highest degree held), 8 (type of teaching certificate), and 10 (sex) were used to elicit information about the characteristics of the population and to make comparisons within these groups, which were the independent variables of the study.

Current literature relating to in-service education (professional development) claims that the teachers should be involved in committees such as needs assessment, planning, implementation, and

policy board in teachers' centers. Question 11 was developed to indicate to what extent the participants of this study were involved in such committees. (See Appendix A.)

Research in professional development has also indicated the importance of teachers' involvement in (1) the needs-assessment process, (2) planning and designing in-service programs and activities offered by the centers, and (3) implementation of in-service activities offered by the centers. To determine to what extent the teachers were involved in such processes, Question 12 was designed to indicate which methods the Kent PSDC was using to assess teachers' needs. Questions 13-19 were developed to indicate to what extent teachers are involved in needs assessment, the planning process, and the implementing process, and to indicate existing barriers that have kept some teachers from being involved. Some of the above-mentioned questions also attempted to determine the teachers' intention to become involved in such processes in the future.

Question 20 was developed to explore what types of activities are offered by the Kent PSDC and how often the teachers were involved in such activities. This question also asked to what extent such activities were helpful to the teachers and what effect such activities have had on classroom instruction.

Question 21 was developed to indicate to what extent the Kent PSDC activities related to: (1) general personal growth,

(2) improving instructional skills related to teachers' teaching assignments, (3) keeping current about educational matters, (4) facilitating change and improvement in the school and in school programs,

(5) helping to move up the career ladder, and (6) organizing and managing the classroom.

Question 22 was designed to indicate whether teachers who had a special problem and who needed help in solving it could obtain such help from the Kent PSDC.

Question 23 was developed to indicate some of the benefits teachers had derived from the activities or programs offered by the Kent PSDC. This question consisted of nine items, the last of which was open ended.

The last two questions were open ended. Teachers were asked to comment about and make recommendations for improving the existing services in the Kent PSDC. Teachers were also asked to suggest some ways and methods by which to make the Kent PSDC programs and activities more meaningful for them.

#### Procedure and Data Collection

After the preparation of the survey, the Kent Professional Staff Development Center was contacted. An exploratory meeting with the director of the Center was set. At that meeting the investigator discussed in detail with the director and a consultant of the Center the purposes of the study. Their general reaction was very positive, and they offered to cooperate in distributing the questionnaires to the participants.

Since the investigator could not obtain a mailing list of the subjects, the director and consultant of the Center suggested that they could distribute the questionnaires through the local district

linkers. After consulting with his research chairperson, the investigator decided to accept that suggestion. As a result of that decision, two letters were written to the linkers, one by the chairperson and the director and the other by the director of the Kent PSCD. (See Appendix A.) The investigator also wrote a cover letter to the questionnaire to explain the purposes and intentions of the study.

The questionnaires were submitted to Kent PSDC personnel on April 26, 1982. On April 27, the Kent PSDC linkers had their annual meeting with Kent PSDC personnel. At that meeting, every linker was instructed to select randomly from his/her school system the elementary, middle school, and secondary school teachers who would be willing to complete the enclosed survey. The linkers were also instructed to have the teachers complete their surveys the week of May 3-7, 1982, and to return them to the director of the Kent PSDC no later than May 14, 1982.

# Data-Analysis Method

The results of the study are presented in terms of demographic information regarding the personal and professional background of the respondents. Furthermore, responses to the various sections of the questionnaire are presented in simple frequency distribution, as well as in terms of personal and professional background variables. Where appropriate, analysis of variance is used to compare groups with regard to attitude-scale items. Chi-square is

used where frequency cross-tabulations are presented. Computations were executed with the help of the <u>Statistical Package for the Social Sciences</u> (SPSS).

Norman Nie, H. Hull, C. Hadulai, Jean G. Jenkins, Karin Steinbrenner, and Dale Bent, <u>Statistical Package for the Social Sciences</u> (New York: McGraw-Hill Book Co., 1975).

#### CHAPTER IV

#### FINDINGS

#### Introduction

In this chapter, the data collected and the findings derived from them are reported and are presented in nine sections. The first section deals with the demographic description of the population studied. Subsequent sections concern seven of the research questions formulated in Chapter I:

- 1. To what extent are teachers involved in the needs-assessment process?
- 2. To what extent are teachers involved in the planning process?
- 3. To what extent are teachers involved in the developing and implementing processes?
- 4. To what extent are teachers involved in committees dealing with the governance of the teachers' center?
- 5. In what types of activities of the Kent Professional Staff Development Center (KPSDC) do the teachers participate?
- 6. What benefits did the teachers perceive in the activities/programs offered by the teachers' center?
- 7. Is there any relationship between active involvement in the committees and perceived benefit from the activities offered by the Center?

In the last section, responses to the open-ended questions posed in the questionnaire are summarized.

## Demographic Characteristics of the Respondents

In this section, demographic information about the study sample is presented.

#### Professional Background

Information about the professional background of the respondents is included in several appendices, as well as in the following discussion and tables. The school districts and schools in which the respondents taught are listed in Appendices B and C, respectively. The mean number of years of teaching experience was 14.15; a detailed breakdown is presented in Appendix D.

School level taught.--Table 1 indicates that about 42% of the respondents were elementary-school teachers, 21% of them were junior-high-school teachers, and 37% were teaching in a senior high school.

Table 1.--School level taught.

| School Level | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |  |
|--------------|-------------------|--------------------------|--------------------------|--|
| Elementary   | 67                | 41.6                     | 41.9                     |  |
| Junior H.S.  | 34                | 21.1                     | 21.2                     |  |
| Senior H.S.  | 59                | 36.6                     | 36.9                     |  |
| No response  | 1                 | 6                        |                          |  |
| Total        | 161               | 100.0                    | 100.0                    |  |

Subject matter taught.--Respondents reported grade level and subjects taught. Their responses are summarized in Table 2, which indicates the number of individuals teaching a given subject as the first or second option. For future use in cross-tabulation, these responses were reduced by collapsing Mathematics and Science into one category--Science, and Social Studies and Language Arts into a second category--Humanities (see, for example, Table 12). The remaining subject areas taught, as listed in Table 2, were included, where appropriate, in a third category--Other.

Table 2.--Subject matter taught.

| Subject Matter <sup>a</sup>   | Yes      |              |  |
|---|----------|--------------|--|
|   | N        | %            |  |
| <ul><li>1 - Mathematics</li><li>2 - Mathematics</li></ul>               | 71<br>24 | 44.1<br>14.9 |  |
| 1 - Science<br>2 - Science  | 59<br>19 | 36.6<br>11.8 |  |
| <ul><li>1 - Social Studies</li><li>2 - Social Studies</li></ul>         | 63<br>22 | 39.1<br>13.7 |  |
| <ul><li>1 - Language Arts</li><li>2 - Language Arts</li></ul>           | 75<br>30 | 46.6<br>18.6 |  |
| 1 - Industrial Arts<br>2 - Industrial Arts                              | 2<br>1   | 1.2<br>0.6   |  |
| 1 - Home Economics<br>2 - Home Economics                                | 2<br>2   | 1.2          |  |
| 1 - Music<br>2 - Music  | 9<br>2   | 5.6<br>1.2   |  |
| 1 - Art<br>2 - Art  | 24<br>6  | 14.9<br>3.7  |  |
| <ul><li>1 - Physical Education</li><li>2 - Physical Education</li></ul> | 14<br>6  | 8.7<br>3.7   |  |

a1 = first option
2 = second option

#### Educational Background

Information about the educational background of the respondents is presented in the appendices, as well as in the following discussion. The undergraduate field of study is listed in Appendix E, the undergraduate institution in Appendix F, and the graduate field of study in Appendix G.

Highest degree held.--Table 3 presents the highest degree held by the respondents. The majority of the teachers held an M.A. degree, and about one-fourth held a B.A. Again, for use in later crosstabulations, codes 1 and 2, as well as codes 4 and 7, were collapsed, as may be seen in Table 13.

Table 3.--Highest degree held.

| Highest Degree  | Code | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|-----------------|------|-------------------|--------------------------|--------------------------|
| B.A., B.S.      | 1    | 37                | 23.0                     | 23.3                     |
| B.A., B.S. + TC | 2    | 8                 | 5.0                      | 5.0                      |
| M.A., M.S.      | 3    | 92                | 57.1                     | 57.9                     |
| M.A., M.S. Plus | 4    | 16                | 9.9                      | 10.1                     |
| Ed. Špecialist  | 7    | 6                 | 3.7                      | 3.8                      |
| No response     | -1   | 2                 | 1.2                      | ••                       |
| Total           |      | 161               | 100.0                    | 100.0                    |

Type of teaching certificate. -- As may be noted in Table 4, some 6% of the respondents had only a provisional teaching certificate, more than half held a permanent certificate, and about one-third had a continuing certificate.

Table 4.--Type of teaching certificate.

| Type of Certificate | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |  |
|---------------------|-------------------|--------------------------|--------------------------|--|
| Provisional         | 10                | 6.2                      | 6.2                      |  |
| Permanent           | 102               | 63.4                     | 63.4                     |  |
| Continuing          | <u>49</u>         | 30.4                     | 30.4                     |  |
| Total               | 161               | 100.0                    | 100.0                    |  |

Personal characteristics.--The mean age of the respondents was 40 years. A detailed listing of years of birth is presented in Appendix H. The sex of the respondents is reported in Table 5.

Sixty percent of the respondents were female, and 40% were male.

Table 5.--Sex of respondent.

| Sex         | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |  |
|-------------|-------------------|--------------------------|--------------------------|--|
| Female      | 96                | 59.6                     | 60.4                     |  |
| Male        | 63                | 39.1                     | 39.6                     |  |
| No response | 2                 | 1.2                      |                          |  |
| Total       | 161               | 100.0                    | 100.0                    |  |

# Teachers' Involvement in the Needs-Assessment Process

Five questions in the questionnaire addressed the teachers' involvement in the needs-assessment process:

11. In case there are such, or similar, committees, are you a member of any of the following: needs assessment (partial item)

- 12. Considering the needs-assessment process, which of the following is being used:
- 13. In which of the following aspects of the needs-assessment process in Kent PSDC have you ever been involved:
- 14. If you indicated in Question 13 that you have not been involved, what has kept you from being involved?
- 15. If you indicated any involvement above, do you hope to continue to be involved?

#### Simple Frequency Distributions

Initially, simple frequency distributions of the responses to each of these five questions are presented.

Membership on needs-assessment committee.—As may be noted in Table 6, nearly 15% of the participants did not respond to this question; another 23% stated that no committee dealing with needs assessment existed. Furthermore, almost 33% of the respondents, in addition to the 38% already mentioned, indicated that they had never been a member of such a committee. Only 29% of the respondents either had been a member of a needs-assessment committee in the past or were currently a member.

Table 6.--Membership on needs-assessment committee.

| Membership     | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|----------------|-------------------|--------------------------|--------------------------|
| No committee   | 37                | 23.0                     | 27.0                     |
| Never a member | 53                | 32.9                     | 38.7                     |
| Former member  | 24                | 14.9                     | 17.5                     |
| Current member | 23                | 14.3                     | 16.8                     |
| No response    | _24               | <u> 14.9</u>             |                          |
| Total          | 161               | 100.0                    | 100.0                    |

Types of needs-assessment processes known. Whereas 23% of the respondents indicated that there was no such thing as a needs-assessment committee (Table 6), even more, 27%, did not answer the question about the types of needs-assessment processes known (see Table 7). The greatest percentage of respondents, 44%, knew about surveys; the rest mentioned interviews, observations, or a combination of these methods.

Table 7.--Types of needs-assessment processes known.

| Process         | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|-----------------|-------------------|--------------------------|--------------------------|
| (1) Survey      | 70                | 43.5                     | 59.3                     |
| (2) Observation | 4                 | 2.5                      | 3.4                      |
| (1) + (2)       | 6                 | 3.7                      | 5.1                      |
| (4) Interview   | 9                 | 5.6                      | 7.6                      |
| (1) + (4)       | 16                | 9.9                      | 13.6                     |
| (2) + (4)       | 1                 | .6                       | .8                       |
| (1) + (2) + (4) | 7                 | 4.3                      | 5.9                      |
| Other ` '       | 5                 | 3.1                      | 4.2                      |
| No response     | _43               | 26.7                     |                          |
| Total           | 161               | 100.0                    | 100.0                    |

Involvement in needs-assessment processes.--Even fewer respondents indicated any involvement in the needs-assessment process, as may be noted from Table 8. Of the one-third of the respondents who did indicate such involvement, nearly half indicated involvement in data collection and another third in data collection and analysis.

Table 8.--Involvement in needs-assessment processes.

| Process  | Absolute<br>Fr <b>e</b> q. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|--|----------------------------|--------------------------|--------------------------|
| <ul><li>(1) Design instrument</li><li>(2) Collect data</li></ul> | 1<br>23                    | .6<br>14.3               | 2.0<br>45.1              |
| (1) + (2)<br>(4) Analyze data                                    | 2                          | 1.2                      | 3.9                      |
| (1) + (4)  | 1                          | .6                       | 2.0                      |
| (2) + (4)<br>(1) + (2) + (4)                                     | 17<br>7                    | 10.6<br>4.3              | 33.3<br>13.7             |
| No response  | <u>110</u>                 | <u>68.3</u>              | • •                      |
| Total  | 161                        | 100.0                    | 100.0                    |

Reasons for noninvolvement.--More than half of the respondents did not answer the question about reasons for noninvolvement in the needs-assessment process, as shown in Table 9. Of those who did answer, nearly half mentioned lack of time, about one-fourth indicated that they had not been invited, and another 15% did not know about this activity.

Table 9.--Reasons for not being involved in needs assessment.

| Reason      | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |  |
|-------------|-------------------|--------------------------|--------------------------|--|
| Not invited | 21                | 13.0                     | 27.3                     |  |
| No time     | 32                | 19.9                     | 41.6                     |  |
| Didn't know | 12                | 7.5                      | 15.6                     |  |
| Other       | 6                 | 3.7                      | 7.8                      |  |
| No interest | 6                 | 3.7                      | 7.8                      |  |
| No response | _84               | 52.2                     | • •                      |  |
| Total       | 161               | 100.0                    | 100.0                    |  |

Intention to continue involvement.--Nearly two-thirds of the participants did not respond to the question regarding an intention to continue their involvement in the needs-assessment process (see Table 10). Of those who did answer, 71% indicated their intention to continue their involvement.

Table 10.--Intention to continue in the needs-assessment process.

| Intention   | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |  |
|-------------|-------------------|--------------------------|--------------------------|--|
| Yes         | 41                | 25.5                     | 70.7                     |  |

| Total       | 161               | 100.0                    | 100.0                    |  |

Next, responses to Questions 11, 14, and 15 are presented in more detail, with responses being broken down by various characteristics of the respondents.

#### Membership on the Needs-Assessment Committee

Table 6 presented the simple frequency distribution of the respondents in terms of their membership on a needs-assessment committee. In the following tables, the same data are presented in such a way as to detect whether there was a relationship between membership on this committee and various professional and personal characteristics of the respondents.

School level taught.--Table 11 presents a tabulation of membership on the needs-assessment committee in terms of the schools in which the respondents taught. No systematic relationship appeared to exist.

Table 11.--Membership on the needs-assessment committee and school level taught.

| School Level                      |                         | No<br>Committee    | Never a<br>Member  | Former<br>Member   | Current<br>Member | Row<br>Total |

Highest degree held.—Table 13 presents a tabulation of membership on the needs-assessment committee in terms of the highest degree held by the respondents. The results of a chi-square analysis suggested a highly significant relationship between these two variables:

Subjects who had only a B.A. degree tended not to know of the committee's existence or had never been a member, whereas those respondents who had an M.A. degree plus credit hours tended either to be current or past members of such a committee.

Type of teaching certificate held.--Table 14 presents a tabulation of membership on the needs-assessment committee in terms of the type of teaching certificate held; again, no systematic relationship appeared to exist.

Table 13.--Membership on needs-assessment committee and highest degree held.

Years of teaching experience.--Table 16 presents a tabulation of mean number of years of teaching experience by membership on the needs-assessment committee. Although, overall, the respondents averaged 14 years of teaching experience, those who did not answer the question regarding membership averaged 17 years of experience, and those who thought there was no such committee averaged 13 years. Those who had never been a member had, on the average, 14 years of teaching experience, and those with current or past membership, 13 to 14 years.

However, there was no statistically significant difference between these groups.

Table 16.--Membership on needs-assessment committee and years of teaching experience.

## Reasons for Noninvolvement in Needs Assessment

Table 9 presented the simply frequency distribution of the respondents in terms of the reasons they gave for not being involved in the needs-assessment process. In the following tables, the same data are presented in such a way as to determine whether there was a relationship between membership on this committee and various professional and personal characteristics of the respondents.

School level taught.--Table 17 presents a tabulation of respondents' reasons for noninvolvement in the needs-assessment process in terms of the school level taught. No systematic relationship between the two variables was found.

Table 17.--Reasons for noninvolvement and school level taught.

Subject area taught.--Table 8 presents the tabulation of respondents' reasons for noninvolvement in the needs-assessment process in terms of the subject area taught, i.e., science or humanities. Among those teaching humanities, some respondents indicated such reasons as "No Interest" and "Illness" for their noninvolvement, in addition to those also offered by the science teachers.

Table 18.--Reasons for noninvolvement and subject area taught.

Highest degree held.--Table 19 presents the tabulation of respondents' reasons for noninvolvement in the needs-assessment process in terms of the highest degree held. No systematic relationship was observed.

Type of teaching certificate.--Table 20 presents the tabulation of respondents' reasons for noninvolvement in the needs-assessment process in terms of the type of teaching certificate held. A systematic relationship was found: Among the respondents holding a provisional teaching certificate, "No Time" was the most frequently given reason; among those with a permanent certificate, the reason was "No Time" and "Not Invited," whereas among those with a continuing certificate, it was "No Time" and "Don't Know."

Table 19.--Reasons for noninvolvement and highest degree held.

Sex of respondent.--Table 21 presents the tabulation of respondents' reasons for noninvolvement in the needs-assessment process in terms of the sex of the respondents. A systematic relationship was observed: "No Time" dominated as a reason among the female respondents, whereas "Not Invited" dominated among the male respondents.

Table 21.--Reasons for noninvolvement and sex of respondent.

| Sex                        |                         | Not<br>Invited     | No<br>Time         | Didn't<br>Know    | Other             | No<br>Interest    | Row<br>Total |

Years of teaching experience.--Table 22 presents the tabulation of the number of years of teaching experience in terms of reasons given for noninvolvement in the needs-assessment process. No systematic relationship was observed. Yet it is notable that those who gave no reason for noninvolvement corresponded to the overall mean in terms of number of years of experience, whereas those who said they were "Not Invited" had the highest number of years of experience, and those who

"Didn't Know" about the process had the lowest mean number of years of experience.

Table 22.--Reasons for noninvolvement and years of teaching experience.

| Mean<br>Years | Std. Dev. | N   | Value Label      |

# Intention to Continue Involvement in the Needs-Assessment Process

Table 10 presented the simple frequency distribution of the respondents in terms of their intention to continue in the needs-assessment process. In the following tables, the same data are presented in such a way as to determine whether there was a relationship between membership on this committee and various professional and personal characteristics of the respondents.

School level taught.--Table 23 presents the tabulation of the respondents' intention to continue their involvement in the needs-assessment process by school level taught. As may be noted, no systematic relationship was observed.

Table 23.--Intention to continue involvement and school level taught.

| School Level                         |                         | Yes                | Maybe             | No Time           | Row Total   |
|--------------------------------------|-------------------------|--------------------|-------------------|-------------------|-------------|

highest average number of years of experience and those indicating "Maybe" the lowest, the overall difference between the various groups was not statistically significant.

#### Teachers' Involvement in the Planning Process

Four questions in the questionnaire addressed the teachers' involvement in the planning process:

- 11. In case there are such, or similar committees, are you a member of the following: planning (partial item)
- 16. In which of the following planning processes have you ever been involved?
  - Identifying the content of teacher professional development.
  - 2. Suggesting programs for professional development.
  - 3. Suggesting speakers or presenters for professional development.
  - 4. Writing mini grant proposals for projects of your own design.
  - 5. Defining desired outcomes of in-service programs.
  - 6. Developing evaluation procedures for programs sponsored by Kent County PSDC.
- 17. If you indicated in the above list that you have not been involved, what has kept you from being involved?
- 18. If you indicated any involvement above, do you hope to continue to be involved?

### Simple Frequency Distributions

Initially, simply frequency distributions of the responses to each of these four questions are presented.

Membership on planning committee.--As may be noted from Table 29, one-fourth of those who responded to the question about membership on a planning committee stated that no such committee

existed. One-third of the respondents indicated that they had never been a member, and 13% did not respond. Of all the respondents, 36% either had been or currently were members of the planning committee.

Table 29.--Membership on planning committee.

| Membership                      | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|---------------------------------|-------------------|--------------------------|--------------------------|
| No committee                    | 34                | 21.1                     | 24.3                     |
| Never a member<br>Former member | <b>47</b><br>20   | 29.2<br>12.4             | 33.6<br>14.3             |
| Current member                  | 20<br>39          | 24.2                     | 27.9                     |
| No response                     | 21                | 13.0                     |                          |
| Total                           | 161               | 100.0                    | 100.0                    |

<u>Participation in planning</u>.--Table 30 presents the kinds of planning activities in which respondents participated. Interestingly enough, although only 59 respondents indicated in Table 29 a past or present membership, 66 respondents mentioned "Suggest Programs" as a form of participation on the planning committee.

Table 30.--Participation in particular planning activities.

| Topic             | Yes |      |  |
|-------------------|-----|------|--|
| TOPIC             | N   | %    |  |
| Identify content  | 46  | 28.6 |  |
| Suggest programs  | 66  | 41.0 |  |
| Suggest speakers  | 56  | 34.8 |  |
| Write mini-grants | 15  | 9.3  |  |
| Define objectives | 23  | 14.3 |  |
| Evaluate programs | 10  | 6.2  |  |

Number of planning activities.—Table 31 presents the total number of different planning activities mentioned by the respondents.

Nearly half of the respondents, some 44.7%, indicated they had not been involved in any activity. An approximately equal number mentioned one, two, or three activities; considerably fewer mentioned four or five activities, and only one respondent indicated six activities.

Table 31.--Total number of planning activities in which respondents participated.

| Number of<br>Activities | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|-------------------------|-------------------|--------------------------|--------------------------|
| 0                       | 72                | 44.7                     | 44.7                     |

Reasons for noninvolvement with planning.--Asked about their reasons for noninvolvement in the planning process, some 70% of the participants did not respond, as may be noted in Table 32. Of those who did answer, nearly half indicated "No Time," one-fourth were "Not Invited," and the rest either did not know or had no interest.

Intention to continue involvement in planning.--Table 33 presents the answers to the question about intention to continue involvement in the planning process. Slightly more than half of the study participants did not respond at all. Of those who did answer,

82% said "Yes," they intended to continue their involvement in the planning process.

Table 32.--Reasons for noninvolvement with planning.

| Reason      | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|-------------|-------------------|--------------------------|--------------------------|
| Not invited | 13                | 8.1                      | 26.5                     |

### Membership on the Planning Committee

Whereas Table 29 presented the simply frequency distribution of the respondents in terms of membership on the planning committee, the following tables present the same information in terms of the educational and personal characteristics of the respondents.

<u>School level taught</u>.--Table 34 presents the tabulation of membership on the planning committee in terms of the school level taught. No systematic relationship was observed.

Table 34.--Membership on planning committee and school level taught.

| School Level                      |                         | No<br>Committee    | Never a<br>Member  | Former<br>Member  | Current<br>Member  | Row<br>Total |

Years of teaching experience. -- Table 39 presents a breakdown of the number of years of teaching experience by membership on the planning committee. Respondents who were former members of the committee had the highest average number of years of teaching experience, whereas those who said there was no such committee had the lowest number of years of experience, closely followed by those who were current members. However, no statistically significant difference was observed.

## Degree of Involvement in the Planning Progress

In Table 31, the number of different planning-committee activities in which the respondents had participated was presented. This number was considered an index of the degree of involvement in planning and was broken down by various educational and personal characteristics of the respondents.

Table 39.--Membership on planning committee and years of teaching experience.

| Mean<br>Years | Std. Dev. | N   | Value Label      |  |
|---------------|-----------|-----|------------------|--|

## Reasons for Noninvolvement in the Planning Process

Table 32 presented the simple frequencies of respondents' reasons for noninvolvement in the planning process. In the following tables, this information is broken down in terms of various personal and professional characteristics of the respondents.

School level taught.--Table 45 presents a tabulation of the respondents' reasons for noninvolvement in the planning process in terms of the school level taught. No systematic relationship was observed.

Subject area taught.--Table 46 presents the tabulation of the respondents' reasons for noninvolvement in the planning process in terms of the subject area taught. No systematic relationship appeared to exist.

Highest degree held.--Table 47 presents the tabulation of the respondents' reasons for noninvolvement in the planning process in terms of the highest degree held. A statistically significant relationship appeared to exist in that lack of time was indicated most frequently among respondents with but a bachelor's degree, whereas no interest was most often cited among those with more advanced degrees.

Table 47.--Reasons for noninvolvement in planning and highest degree held.

Sex of respondents.--Table 49 presents the tabulation of the respondents' reasons for noninvolvement in the planning process in terms of the sex of the respondents. Although not significant, a tendency toward a systematic relationship was suggested by the data, in that lack of time was a somewhat more prominent reason among female respondents, and no interest was more common among male respondents.

Years of teaching experience.--Table 50 presents a breakdown of the number of years of teaching experience in terms of the respondents' reasons for noninvolvement in the planning process. No significant differences were observed.

# Teachers' Involvement in Implementation of Programs

Two questions in the questionnaire addressed the teachers' involvement in the implementation of programs:

- 11. In the case there are such, or similar, committees, are you a member of any of the following: implementation (partial item)
- 19. Considering the scale below, would you characterize your involvement in the implementation of the activities of Kent PSDC more as actively involved (1) or as not involved at all (5)?

### Simple Frequency Distributions

Initially, simple frequency distributions of the responses to each of these two questions are presented.

Membership on the implementation committee.—Table 57 presents the responses to the question concerning membership on the implementation committee. Nearly 20% of the respondents did not answer this question at all; of the remainder, 30% indicated that there was no such committee, and another 40% said that they had never been a member. Only about one-fourth of the total number of respondents either had been or currently were members of the implementation committee.

Table 57.--Membership on implementation committee.

| Membership     | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|----------------|-------------------|--------------------------|--------------------------|
| No committee   | 38                | 23.6                     | 29.5                     |
| Never a member | 52                | 32.3                     | 40.3                     |
| Former member  | 14                | 8.7                      | 10.9                     |
| Current member | 25                | 15.5                     | 19.4                     |
| No response    | _32               | <u> 19.9</u>             |                          |
| Total          | 161               | 100.0                    | 100.0                    |

Degree of involvement in implementation.--Table 58 presents the responses to an attitude scale concerning involvement in implementation. Some 85% of the total sample responded to this question, half of whom indicated "no involvement." The mean degree of involvement in implementation was 4.02, between "more or less" (value 3) and "not involved" (value 5).

Table 58.--Degree of involvement in implementation.

| Involve      | ement          | Absolute<br>Freq.      | Relative<br>Freq.<br>(%) |                    | Adjusted<br>Freq.<br>(%) |

## Membership on Implementation Committee

Table 57 presented the simple frequency distribution of membership on the implementation committee. In the following tables, these responses are broken down in terms of personal and professional characteristics of the respondents.

School level taught.--Table 59 presents the tabulation of membership on the implementation committee in terms of the school level taught. A significant relationship may be observed: Among the junior-high-school teachers were the fewest former or present members, followed by the elementary-school teachers, whereas among the senior-high-school teachers there was the largest proportion of former and present members.

Table 59.--Membership on implementation committee and school level taught.

| School Level                      |                         | No<br>Committee    | Never a<br>Member  | Former<br>Member   | Current<br>Member  | Row<br>Total |

Subject area taught.--Table 60 presents the tabulation of membership on the implementation committee in terms of the subject area taught. No systematic relationship appeared to exist.

Highest degree held.--Table 61 presents the tabulation of membership on the implementation committee in terms of the highest degree held. Although it is not significant, a tendency toward a systematic relationship may be observed in the sense that with a higher degree or more education, a higher proportion of the respondents were current or former members of the committee.

Table 60.--Membership on implementation committee and subject area taught.

Sex of respondent.--Table 63 presents the tabulation of membership on the implementation committee in terms of the sex of the respondents. No systematic relationship appeared to exist.

Years of teaching experience.--Table 64 presents the breakdown of years of teaching experience in terms of membership on the implementation committee. No statistically significant differences between the various membership groups were found. However, it may be observed that those who did not answer this question had notably more years of

## Degree of Involvement in Implementation

Table 58 presented a simple breakdown of the respondents' degree of involvement in the implementation process. The following tables present these data in terms of personal and professional characteristics of the respondents.

School level taught.--Table 65 presents a breakdown of the participants' degree of involvement in the implementation process in terms of the school level taught. No significant difference between the groups was observed.

Table 65.--Degree of involvement in implementation and school level taught.

| Mean<br>Degree          | Std. Dev.               | N              | Value Label                              |

Years of teaching experience. -- Finally, the correlation between the respondents' degree of involvement in implementation and the number of years of teaching experience was not significant:

Degree of Involvement

Teaching -.0192 Experience ( 135) P = .413

### Teachers' Involvement in Governance Processes

In the three previous sections, results pertaining to the respondents' involvement in the needs-assessment process, planning process, and implementation process were presented. In this section, the respondents' overall involvement in these three areas and a fourth, policy board, are presented. Only one question in the questionnaire dealt specifically with this topic:

11. In the case there are such, or similar, committees, are you a member of the following:

Needs assessment Planning Implementation Policy board

#### Membership on Governance Committees

In previous sections, membership on three governance committees was discussed. Table 70 presents a summary of the information presented in Tables 6, 29, and 57, as well as data concerning membership on the policy board of the Kent Professional Staff Development Center. As may be noted from this table, even more respondents were not aware of the existence of a policy board, nor had they ever been

members of such a committee. Only about 15% of the respondents either had been or currently were members of the policy board.

Table 70.--Membership on governance committees.

| Membership          |                | No<br>Committee | Never a<br>Member | Former<br>Member | Current<br>Member | No<br>Response | Row<br>Total |

Current membership in governance process.--Table 71 presents the number of different committees (needs assessment, planning, implementation, and/or policy board) of which respondents currently were members. Nearly three-fourths of the respondents were not involved on a single committee, whereas approximately equal numbers were involved in one, two, three, or even all four governance committees.

Past or current membership in governance process.--In contrast with Table 71, Table 72 presents the number of different committees of which respondents had ever been members, either currently or in the past. Even with the inclusion of past membership, more than half of the respondents still appeared never to have been involved in any of the four committees in question.

Table 71.--Number of current committee memberships.

# Number of Past or Present Committee Memberships

In the following tables, the number of past and present committee memberships are presented in such a way as to determine whether there was any relationship between this variable and personal and professional characteristics of the respondents. School level taught.--Table 73 presents a breakdown of the mean number of past and present committee memberships in terms of school level taught. No significant difference was found.

Table 73.--Number of committee memberships and school level taught.

## Participation in KPSDC Activities

The four previous sections dealt with the teachers' involvement in the governance processes of the Kent Professional Staff

Development Center (KPSDC), i.e., needs assessment, planning, implementation, and policy board. The following sections deal with the teachers' participation in the activities offered by the Center, as

well as their evaluation of the benefits obtained from such participation. Two questions in the questionnaire, each with several subparts, asked about participation in and usefulness of the activities of the Center:

20. During the 1980-81 school year, which of the following activities have you participated in at Kent PSDC:

Workshops Courses Study groups Lectures

For each alternative, respondents were asked (a) how often, (b) helpfulness, and (c) use of what was learned in the classroom.

21. During your participation in the Kent Professional Staff Development Center's activities, have you found the activities you have participated in are related to:

General personal growth
Improving instructional skills
Keeping current about educational matters
Facilitating change and improvement
Helping with one's career
Organizing the classroom

## Simple Frequencies

In the following pages, descriptive data for the two questions are presented.

Participation in Kent PSDC activities.--Table 78 presents an overview of the responses to Questionnaire Item 20. Considering participation, it may be noted that the highest degree of participation was in workshops, of which slightly over half of the respondents availed themselves. This was followed by lectures, which about one-third of the respondents attended. Courses and study groups appeared

to have very little appeal to the respondents, with less than 10% indicating participation in either of these two activities.

| Participa    |     | ipation | n Helpfulness <sup>a</sup> |    | Use of Material |    |     |
|--------------|-----|---------|----------------------------|----|-----------------|----|-----|
| Activity     | Yes | No      | Mean                       | N  | Yes             | No | NA  |
| Workshops    | 82  | 79      | 1.85                       | 92 | 70              | 11 | 80  |
| Courses      | 10  | 151     | 2.33                       | 12 | 5               | 2  | 154 |
| Study groups | 5   | 156     | 2.67                       | 6  | 2               | 2  | 157 |
| Lectures     | 52  | 109     | 1.99                       | 67 | 39              | 14 | 108 |

<sup>&</sup>lt;sup>a</sup>Scale: l = very helpful, 5 = not helpful.

Parallel to the degree of participation, the degree of help-fulness attributed to these four activities was highest for workshops, followed by lectures, courses, and study groups, in that order. It is noteworthy that more people judged the helpfulness of the activities than actually participated in them.

Considering the use of the material presented in the various activities, it may be noted that the proportion of respondents who indicated a use was highest among workshop participants, followed by those who had taken part in lectures, courses, and study groups.

Topics of activities in which teachers participated.--Table 79 presents a tabulation of the topics presented in the various activities offered by the Center. The topics are presented in the order of their importance to the respondents. Topics related to personal growth appeared to be the most relevant, followed by improvement of

instructional skills. Information about career advancement was mentioned by the fewest respondents.

Table 79.--Topics of activities.

| Topic   | Often<br>(1) | Sometimes (2) | Little<br>(3) | Never<br>(4) | Mean | No<br>Response | Meana |
|---|--------------|---------------|---------------|--------------|------|----------------|-------|

| Facilitation of improvement                                   | 22           | 39            | 18            | 6            | 2.09 | 76             | 2.16  |
| Career<br>advancement   | 2            | 14            | 22            | 32           | 3.20 | 91             | 3.22  |

 $<sup>^{\</sup>mathrm{a}}\mathrm{Mean}$  for the 58 subjects who checked all six topics.

ANOVA of topics.--Since only 58 subjects checked all six activity topics, Table 80 presents the results of an analysis of variance of repeated measures, comparing the degree of participation in activities with the various topics indicated in Table 79. As may be noted from the results presented in Table 80, a highly significant difference was found in the degree of participation.

Table 80.--Comparison of the relative participation in activities with various topics.

| Source of Variation   | SS                                     | df                    | Mean<br>Square                  | F      | Sig.  |

| Total   | 303.066                                | 347                   | .873                            |        |       |

Note: The means compared in this analysis appear in Table 79.

#### Benefits Received From KPSDC

Two questions sought information regarding the benefits respondents had received from the Kent Professional Staff Development Center.

- 22. During your participation in the Kent PSDC activities, have you ever requested help or aid with a classroom problem? If yes, please state the problem and the help received.
- 23. What are some of the benefits that you have derived from the activities or programs offered by Kent PSDC? Please check all appropriate categories.

#### An opportunity

- a. for personal growth
- b. to learn from others' experiences and ideas
- c. to open myself for feedback
- d. to be updated in my teaching field(s)
- e. to continue to develop a greater perspective on my profession
- f. to learn new teaching styles
- q. to know more about some societal problems
- h. for better understanding of human growth

### Simple Frequencies

In the following discussion and tables, simple frequencies of responses to questions regarding the benefits received from participation in the Kent Professional Staff Development Center are presented.

Ever requested help?--Table 81 presents the number of individuals who had ever requested help from the Center. Some 77% of the respondents explicitly stated "No"; only seven respondents indicated "Yes," giving the topic of their need. Of these seven, five had requested help with classroom discipline.

Table 81.--Ever requested help?

| Category              | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted Freq. (%) |
|-----------------------|-------------------|--------------------------|--------------------|
| No                    | 124               | 77.0                     | 94.7               |
| Curriculum problem    | 1                 | .6                       | .8                 |
| New didactic approach | 1                 | .6                       | .8                 |
| Classroom control     | 5                 | 3.1                      | 3.8                |
| No response           | _30               | 18.6                     | • •                |
| Total                 | 161               | 100.0                    | 100.0              |

Specific benefits derived.--Table 82 presents the number of affirmative responses to Questionnaire Item 23, which asked respondents to check whether particular benefits applied to them. Again, the topics are presented in the order of their importance to respondents (rather than the order in which they appeared in the questionnaire). "Learning from others" was mentioned most often, followed closely by "personal growth" and "new teaching styles," i.e.,

improvement of instructional skills. "Understanding human growth" and "learning about social problems" were mentioned least often.

Table 82.--Benefits derived from KPSDC.

| Benefit                     | Yes |      |  |
|-----------------------------|-----|------|--|
| Defier i C                  | N   | %    |  |
| earn from others            | 105 | 65.2 |  |
| Personal growth             | 93  | 57.8 |  |
| New teaching styles         | 81  | 50.3 |  |
| Updated information         | 70  | 43.5 |  |
| Greater perspective         | 69  | 42.9 |  |
| Open self to feedback       | 66  | 41.0 |  |
| Understand human growth     | 59  | 36.6 |  |
| Learn about social problems | 47  | 29.2 |  |

<u>Number of benefits mentioned</u>.--On the basis of the responses presented in Table 82, an index of benefits derived was computed on the basis of the number of benefits mentioned. Table 83 presents a tabulation of the number of benefits checked, as well as the mean number of benefits, namely, 3.7.

#### Number of Benefits Derived

In the following pages, the data presented in Table 83 are broken down by various personal and professional characteristics.

School level taught.--Table 84 presents a breakdown of the mean number of benefits received in terms of the school level taught. Although junior-high-school teachers appeared to derive more benefits than did elementary-school or high-school teachers, no statistically significant difference was found.

Table 83.--Number of benefits mentioned.

| Number<br>Benefi |       | Absolute<br>Freq. | Relative<br>Freq.<br>(%) | Adjusted<br>Freq.<br>(%) |
|------------------|-------|-------------------|--------------------------|--------------------------|

Number of years of teaching experience.--Finally, the correlation between the mean number of benefits received and the number of years of teaching experience was not significant.

Years of Teaching Experience

Mean Number -.0212 of Benefits P = .395

## Number of Benefits Derived and Involvement in Governance

A final question that needs to be answered is whether the degree of participation in the various governance committees, as reported above, bore any relationship to the number of benefits that respondents indicated they had derived from the teachers' center.

<u>Needs-assessment process.</u>—Table 89 presents a breakdown of the mean number of benefits received in terms of the participation in the needs-assessment committee (see Table 6). As may be noted, with increased involvement in the needs-assessment process, respondents reported receiving a significantly higher number of benefits from the teachers' center.

Table 89.--Number of benefits derived by involvement in needs-assessment processes.

| Mean<br>Number | Std. Dev. | N   | Value Label      |
|----------------|-----------|-----|------------------|

<u>Policy board</u>.--Table 92 presents a breakdown of the mean number of benefits received in terms of membership on the policy board of the teachers' center. Once more, it may be observed that increased involvement in the governance committee was related to a significant increase in the number of perceived benefits.

Membership and benefits.--Table 93 presents correlation coefficients between the mean number of benefits (BENEFT), the number of current memberships on the governance committees (CURMEM), and the number of past and present memberships on governance committees (MEMBER). There was a highly significant correlation between the number of memberships and the number of benefits derived from the

teachers' center activities, although a causal relationship has yet to be established.

Table 92.--Number of benefits derived by participation on policy board.

# Suggestions for More Meaningful and Useful Programs

The questionnaire concluded with two open-ended questions:

- 24. Please list any specific comments or recommendations you have regarding ways the Kent PSDC involves teachers in (1) needs assessment, (2) planning programs, and (3) implementing programs.
- 25. Please identify at least three ways Kent PSDC could provide for more meaningful and useful programs and activities for teachers.

The responses to Question 25 were considerably more numerous than those to Question 24 and are presented on the following pages. Verbatim responses are transcribed in Appendix I. Table 94 presents a tabulation of the frequency of suggestions, grouped in various categories.

Approximately 25% of the suggestions, offered by nearly half of the respondents, dealt with the programming process. A few of the respondents implied that administrators in the schools as well as school districts needed to value the program activities of the Kent Center more. A series of suggestions dealt with the manner in which the local teachers are heard when programs are developed. Parallel to this group of suggestions, comments were made about better needs-assessment procedures and follow-up and evaluation of programs. The majority of the comments and suggestions in this category, however, specifically addressed the need for better publicity, including a series of suggestions about how to reach the teachers better.

Table 94.--Suggestions for the improvement of Kent PSDC programs.

Nearly 30% of the suggestions, presented by more than half of those responding, concerned topics of Center activities. The majority of these suggestions were of a general nature, such as pointing to the need for more applied rather than theoretical workshops. However,

About one-third of those responding commented about the location and audience for Center activities. Of these, about a third called for more cooperative activities that might join faculty members in the same subject area across school-district lines. The majority, though, called for more specific presentations, directed at the "building" level within a given school district and covering problems of that particular school.

An equal number of individuals made suggestions regarding the scheduling of Center activities. These suggestions ranged from basics like "start on time" to such concerns as released time versus after-school activities and the possibility of receiving college or career credit.

A number of respondents mentioned the problem of decreasing funds, while suggesting that the Center do more of what it even now has difficulty doing because of lack of money.

A few respondents simply praised the Center for the work it was doing or criticized the survey as superfluous.

#### CHAPTER V

## SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

A summary of the findings is presented in the first section of this chapter. The two subsequent sections contain the conclusions of the study and recommendations for the Kent Professional Staff Development Center (KPSDC) and for in-service education in Saudi Arabia.

### Summary

This study had two major purposes: (1) to examine the extent to which teachers are involved in the four governance processes of the KPSDC, namely (a) needs assessment, (b) planning, (c) implementation, and (d) the policy board; and (2) to examine the teachers' perceptions of ways in which the in-service education provided by the teachers' center affects teachers' classroom instruction.

Furthermore, the researcher expected to be able to generate some recommendations regarding teachers' centers and in-service education in Saudi Arabia.

Initially, a review of the literature dealing with in-service education, teachers' centers, and their role in in-service education was conducted. In addition, a survey of members of the Kent Professional Staff Development Center in Grand Rapids, Michigan, was conducted to gather information about the teachers' involvement in the

activities and offerings of the Center, as well as their perceptions of the benefits derived from such participation.

# Summary of the Findings

In this section, the findings of the study are summarized, beginning with the demographic information about the respondents, followed by their involvement in the various governance activities, and concluding with their responses regarding benefits derived from participation in the activities of the Kent PSDC.

<u>Demographic information</u>.--Concerning their professional background, some 42% of the respondents indicated that they taught at an elementary school, 21% at a middle school, and 37% at a senior high school. Most of the respondents taught mathematics, science, social studies, or language arts; fewer taught industrial arts, home economics, music, art, or physical education. The mean number of years of teaching experience was slightly more than 14 years.

In regard to their educational background, some 68% of the respondents held at least an M.A. degree, whereas about 28% held a B.A. or B.S. degree; the remainder held an educational specialist degree. Asked about their teaching certificate, the majority of respondents (63%) indicated that they had a permanent certificate, about 30% had a continuing certificate, and 6% had a provisional certificate.

Concerning the personal characteristics of the respondents, 60% were female, and the mean age was 40 years.

Involvement in the needs-assessment process.--When asked about their membership on the needs-assessment committee, only 29% of the respondents either had been or currently were members of this committee. Some 23% even indicated that there was no such committee. Regarding the types of needs-assessment processes known to the respondents, about 44% knew about surveys, and 29% mentioned interviews, observation, or a combination of these methods. Only one-third of the respondents indicated they were actually involved in the needs-assessment process. Asked about the reasons for noninvolvement, less than half of the respondents indicated a reason at all, mostly saying that there was a lack of time, that they did not know about the committee, or that they had not been invited. Regarding their intentions to continue involvement in the needs-assessment process, about two-thirds of the respondents did not answer at all; of the rest, some 71% indicated an intention for future involvement.

When participation in the needs-assessment process in terms of the background variables was analyzed, a few statistically significant relationships were found, most notably: (1) respondents with more advanced education were more likely to be members of the needs-assessment committee; (2) among respondents teaching in the humanities, there was a tendency to indicate "no time" as a reason for noninvolvement on the needs-assessment committee; (3) among respondents with permanent teaching certificates, there was a tendency to indicate "no time" as a reason for noninvolvement on the needs-assessment committee; and (4) more females indicated "no time,"

whereas more male teachers indicated "not invited" as a reason for noninvolvement in the needs-assessment process.

Involvement in the planning process.--Asked about membership on the planning committee, only 36% of the respondents either had been or currently were members. Some 21% even indicated that there was no such committee. Regarding the kinds of planning activities respondents participated in, 41% indicated "suggestion of programs," 34% indicated "suggestion of speakers," and 29% indicated "suggestion of content." Asked why they did not participate in the planning process, only 30% responded to this question. Of those who did respond, nearly half indicated "no time." When asked about their intention to continue involvement in the planning process, more than half did not answer; of those who did, 82% planned to continue their involvement.

Participation in the planning process was analyzed in terms of the background variables, and a few statistically significant relationships were found, most notably: (1) the higher the educational degree obtained, the more involvement in planning activities; (2) those with only a B.A./B.S. degree tended to give "no time" as a reason for noninvolvement in planning, whereas those with an M.A.+ degree tended to give "no interest" as a reason; (3) female respondents tended to give "no time" as a reason for noninvolvement in planning, whereas "no interest" was rather important for male respondents as well; and (4) among those with more education, there was a greater tendency to want to continue their involvement in the planning process.

Involvement in the implementation of programs.—When they were asked about membership on the implementation committee, only 30% of the respondents indicated that they either had been or currently were members of this committee. Some 23% even stated that there was no such committee. Asked to rate their degree of involvement on a 5-point scale (1 = high), the mean was 4.02; 50% stated they were not involved.

Participation in the implementation process was analyzed in terms of the background variables; the following statistically significant relationships were found: (1) hardly any junior-high-school teachers were present or former members of this committee; (2) the higher the education obtained, the more likely a membership on this committee; (3) the higher the education obtained, the stronger the involvement in the committee; and (4) respondents holding a permanent teaching certificate showed the greatest degree of involvement in this committee.

Membership in the governance process.--Asked about membership on the policy board, the general coordinating committee of the teachers' center, only 15% of the respondents indicated past or present membership, and 26% stated that there was no such committee. When respondents were asked about the number of different governance committees of which they were then or had been members, 60% indicated no membership and 10% indicated four committee memberships.

When participation in the governance process was analyzed in terms of the background variables, one statistically significant

relationship was found: The higher the education obtained, the higher the number of committee memberships.

<u>Participation in activities offered by KPSDC</u>.--Besides being asked about their participation in various governance processes, the teachers were also asked for their perceptions of the usefulness and applicability of the programs offered by the Kent Professional Staff Development Center.

Concerning the types of activities that respondents participated in and used, workshops were cited most often (50% participation; 1.9 helpfulness on a 5-point scale with 1 = very helpful). Lectures were cited by about one-third of the respondents (2.00 helpfulness), whereas courses and study groups were mentioned by less than 10% of the respondents. The actual use of what was learned in these activities in the classroom followed the above pattern.

In terms of topics of activities, those dealing with personal growth and improving instructional skills were cited most often; the facilitation of improvement and career advancement were mentioned least often.

Finally, respondents were asked about the benefits received from participation in the activities of the KPSDC. A noteworthy result was that 77% of the respondents indicated they never had asked for help from the Center; less than 5% stated they had done so explicitly. Of a series of potential benefits listed, "learn from others," "personal growth," and "new teaching style" were checked most often. Concerning the number of different benefits derived, a clear correlation was found with degree of education; that is, with more

education, more benefits were perceived as emanating from the teachers' center.

Concerning membership on the individual governance committees as well as the degree of involvement in the governance process as a whole, significant correlations were found between these measures and the number of benefits derived from the activities offered by the teachers' center. Consistently, those who were active on any one committee, or on more than one, rated the activities as more beneficial than those who were not active on a committee.

Suggestions for more meaningful and useful programs.--The open-ended suggestions for improvement of the programs offered by the KPSDC were grouped into six categories. About 25% of the suggestions dealt with programming--more specifically, the need for administrators to value in-service programs, to have more teacher input, better needs assessment and evaluation, and more publicity. About 29% of the suggestions dealt with programming topics, either making specific topic suggestions or more general statements. Some 16% of the suggestions were made with regard to location and audience, primarily asking for programs directed at more specific audiences and/or locations. Some 17% of the suggestions dealt with scheduling of the activities, addressing such problems as advanced planning, after-school activities, released time, and academic credit. Finally, some 13% of the suggestions referred to problems of finances and other general topics.

## Conclusions

Based on the summary of the results presented above, the following conclusions are offered:

- 1. Involvement in the various governance committees was relatively low and appeared to be related principally to the respondents' educational level; that is, the more education members had, the more involved in needs assessment, planning, implementation, and the policy board they tended to be.
- 2. In addition, the higher the education, the more benefits respondents perceived as being derived from the teachers' center.
- 3. With increased involvement in the governance process, the activities offered by the teachers' center were perceived as more beneficial.
- 4. Of the programs offered, workshops and lectures were most frequented by the respondents, were considered most helpful, and were seen as most applicable in the classroom.
- 5. Activities having topics dealing with personal growth and the improvement of instructional skills were the ones frequented most.
- 6. Specific benefits of participation in teachers' center activities were related to learning from others, personal growth, and learning new teaching styles.

## Recommendations

## Recommendations for Further Research

Given the findings of the present research, the following are some topics that might be followed up in future research on the effectiveness of teachers' centers:

- 1. Is there a relationship between age and/or number of years of teaching experience, highest degree obtained, and the motivation to get involved in the activities of teachers' centers? In other words, could it be that beyond a certain age, and given a relatively low level of education, this interest diminishes?
- 2. Would the findings of this study be repeated at other teachers' centers?
- 3. How do teachers' centers in the United States compare with those in Great Britain, where they were first developed? How do they compare with teachers' centers in other countries?
- 4. There should be careful monitoring of the development of teachers' centers in Saudi Arabia, in case they are established. What is the reaction to, participation in, and use of such centers by Saudi teachers?

## Recommendations for KPSDC

Given the findings of this study, the following recommendations for the KPSDC are offered:

- 1. All teachers should be given more opportunities to take part in the various governance processes, be they needs assessment, planning, implementation, or the policy board.
- More diverse methods should be employed in the needsassessment process to obtain input from a wider portion of the audience, and more follow-up evaluations should be conducted.
- 3. A stronger communication bridge between the KPSDC and the administrators in the schools and school districts should be developed.

to increase their support and cooperation with the center's activities.

- 4. Programs offered by the KPSDC should be directed at the concerns of a particular school district as well as a school within a district and should include specific topics/subject areas that might invite cooperation across school districts or buildings.
- 5. More attention should be given to scheduling the activities in terms of released time, after-school activities, and college credit.
- 6. More awareness of Center organization and activities should be developed among the teachers served by the Kent Professional Staff Development Center.

# Recommendations for In-Service Education in Saudi Arabia

As noted before, the final objective of the present study was to provide some recommendations for the nascent in-service education in Saudi Arabia. Without elaborating on the many social and cultural differences between education in Saudi Arabia and in the United States, it is clear that any adaptation of American educational innovations to conditions in Saudi Arabia must proceed with great care. However, one recent finding by Zafar shed light on one characteristic of Saudi public education. He found that there appears to be a lack of coordination between college teaching in the field

A. A. Zafar, "An Evaluation of the Mathematics Curriculum Given at the College of Education, Makkah, From the Perspective of the Teachers Who Graduated From the College in the Years 1976-1980." Ph.D. dissertation, Michigan State University, 1981.

of education and the actual tasks of teachers after graduation. In this context, teachers' centers in Saudi Arabia could serve as an important bridge between the theoretical knowledge taught in the universities and the practical problems encountered in the field. Given the observations made at the teachers' center studied in this research, the following recommendations are offered:

- 1. Since the success of teachers' centers for in-service education has been proven in England, the United States, and some developing countries, the establishment of such centers at every major university in Saudi Arabia may prove important in providing public-school personnel with professional development opportunities and in increasing their instructional skills, knowledge, and personal growth.
- 2. Because a teachers' center is a concept, <u>in situ</u> or in a changing location, the in-service activities can be offered in local school buildings as well as at a central location. This means that the center can operate in rural areas as well as major cities in Saudi Arabia.
- 3. To provide teachers with effective in-service programs in the centers, a well-organized needs-assessment process must be carried out. Such a process would include gathering information from the teachers themselves about their needs for in-service activities through surveys, interviews, supervisors' observations, and follow-up evaluations.
- 4. Successful professional-development programs can be developed in teachers' centers if the involvement of the teachers

who participate in such programs is increased. As the results of the present study demonstrated, and in the words of Baden, "When teachers are involved in enunciation and organization of training activities, conditions are enhanced for peer support, shared effort and eventual utilization of new insights and skills."

- 5. To facilitate such involvement, committees dealing with needs assessment, planning, and implementation of programs should be created in each teachers' center to give teachers an opportunity to participate actively in a well-organized manner.
- 6. The scheduling of activities of the teachers' centers in Saudi Arabia should not conflict with other school activities.
- 7. The cooperation of the Ministry of Education is essential because teachers could be given released time from their jobs to participate in professional-development activities, or they could be given some economic incentive to attend.
- 8. Each teachers' center in Saudi Arabia should offer some activities for college credit to motivate the teachers to attend.
- 9. Each teachers' center should make a sincere effort to increase the awareness of the administrators in the schools as well as school districts regarding the importance of in-service activities for public-school teachers.
- 10. Each teachers' center should offer workshops and lectures related to the improvement of instructional skills, updating knowledge in different teaching fields, and personal growth.

<sup>&</sup>lt;sup>1</sup>D. J. Baden, <u>Developing and Implementing a Teacher-Directed Professional Development Model</u> (Bethesda, Md.: ERIC Document Reproduction Service, ED 121 730, 1976), p. 2.

11. The activities of the teachers' centers must be given ample publicity to let all teachers know about the programs offered.

SUBJECT: A Study of Professional Staff Development Activities

The professional staff development activities carried on through the Kent Center are recognized as being particularly effective and helpful. One of the ways we can seek to make them even more effective is to get reactions to them by the people who use them - the teachers. In addition, we are able to share more fully what we're doing with other Centers by describing our activities in some detail.

Abdulhakeem Mubarak has designed a study which will be helpful, both to us and to others, in gathering information about KPSDC activities. We're asking your help, as linkers, in distributing a questionnaire to some 300 teachers of the over 6000 who participate in our activities. Results will be available to the Policy Board and Linkers to aid all of us to look more closely at what we're doing. In addition, our participation will aid us to share the concept of professional development with teachers in another country, Saudi Arabia.

We support this effort and we know we can count on your good help! Thanks to each of you!

đΖ

## Dear Participant:

The enclosed questionnaire has been developed in order to conduct a descriptive study of perceived professional benefits derived from teacher involvement in the Kent Professional Staff Development Center. The results will be used in developing recommendations for in-service education in Saudi Arabia because the emergence of the teachers' center concept is a new hope for professional development (in-service education) of teachers as its fundamental purpose is to involve teachers more directly in their own professional development.

This study will be completed with your valued cooperation and assistance. At the same time, please be assured that confidentiality will be strictly maintained throughout the study. Names of all participants will be kept anonymous on any of the materials. I shall be very glad to share the summary of the findings with you if you so desire.

Thank you for your valuable time and cooperation.

Sincerely,

Abdulhakeem M. Mubarak

| The  | following questions relate to your current professional activities:   |
|------|---|
| 1.   | At which school do you work? Please indicate the name of your school and of your school district.                     |
|      | School:   |
|      | District:   |
| 2.   | Please indicate the number of years (including this one) that you have taught.  Years                                 |
|      | Tears   |
| 3.   | What is your major teaching assignment?  1. Elementary  |
|      | 2. Junior High/Middle School  |
|      | 3. Senior High  |
| 4.   | What subject fields do you teach? Please check appropriate field(s and indicate grade level taught (e.g., Math: 5,7). |
|      | 1. Math 6. Home Economics   |
|      | 2. Science 7. Music   |

| During your participation in the Kent PSDC activities, | nave you |
|--|----------|
| ever requested help or aid with a classroom problem?   |          |

\_\_\_\_ 1. Yes

\_\_\_\_ 2. No

If yes, please state the problem and the help received.

| 23. | What are some of the benefits that you have derived from the activities or programs offered by Kent PSDC? (Please check all appropriate categories.)                                    |
|-----|---|
|     | a. An opportunity for personal growth.  |
|     | <pre>b. An opportunity to learn from others' experiences     and ideas.</pre>   |
|     | c. An opportunity to open myself for feedback from and<br>interaction with people who are in the same profession.   |
|     | d. An opportunity to be updated in my teaching field(s).  |
|     | e. An opportunity to continue to develop a greater perspective on my profession.  |
|     | f. An opportunity to learn new teaching styles, which helps me to meet the individual needs of the students.  |
|     | g. An opportunity to know more about some societal problems that will affect education.   |
|     | h. An opportunity for better understanding of human growth<br>and development, with some focus on learning-teaching<br>theories and applications.                                       |
|     | i. Other (please specify)   |
| 24. | Please list any specific comments or recommendations you have regarding ways Kent PSDC involves teachers in (1) needs assessment, (2) planning programs, and (3) implementing programs. |
| 25. | Please identify at least three ways Kent PSDC could provide for more meaningful and useful programs and activities for teachers.  |

# APPENDIX I

RESPONSES TO OPEN-ENDED QUESTION: SUGGESTION FOR MORE MEANINGFUL AND USEFUL PROGRAMS

## Appendix I

# Responses to Open-Ended Question: Suggestion for More Meaningful and Useful Programs

## Programm ing

Suggestions regarding the *Programming Process* have been subdivided in five categories, as follows:

- 1. Administrators should value the activities offered by the Kent Professional Staff Development Center
  - 045 Emphasize importance of center through administration as as well as faculty
  - 060 Administrators who see this as valuable for the dev. of their staff to keep up with times. If administrators in central office do not view this as important -- then much of the information is not disseminated to staff
  - I have not sensed much enthusiasm for these activities among the adminstration.

#### 2. Input

- Oll Work harder to get input from more teachers -- rather than administration
- 014 Involve more teachers in planning programs
- O53 Continue to encourage (instruct) linkers to do their job and give inservice to the "how to" of teacher involvement
- Provide educational personnel in participating districts an opportunity to suggest speakers, their topics, and other programs.

More involvement of local district personnel in the planning.

- 116 Keep in constant touch with teachers in the field before arranging programs
- 156 More input from teachers.

#### 3. Need Assessment

- 007 Insure value of presentation before giving inservice
- 014 More frequent survey of teacher needs -- needs change in education
- O79 PSDC planners could come to the local school and speak with individual teachers on their needs. This is different than just sending an impersonal survey.
- 104 Better needs assessment.
- when KPSDC has offered programs of appeal to people in the Education profession regardless of their particular assignment, there has usually been a \$20 fee associated with attendance. With plenty of free programs to choose from, I'm not ready to pay \$20 for another program of equal value.

If KPSDC offered programs/activities not already available within my own district, I might use them.

## 4. Follow-up and evaluation

- OO8 Indicate how these programs can be of value to the classroom teacher.
- 058 Small-group follow-ups for specific programs.
  - Professional assessment of individual building atmospheres -- academic and social.
- O78 Bring back speakers for follow-up workshops, activities, lectures, etc. For example, I would like some follow-up activities or to know more about holistic teaching. Since I can't afford to go to one of Gayleann's workshops, could she come back with mini-workshops different from the first one.
- 106 If published material is not read, find out why.

## 5. Publicity

- Ol2 Use Ed. TV in the evenings to give a brief idea of what the inservice lecture/workshop will cover.
  - Sometimes information about such programs arrives just before or right after the planned event.
- O26 The only way I find out what is being offered in by flyers in our teachers lounge.
  - I don't know how their advisory groups are set up -- perhaps if people were aware, they'd volunteer to be on one of the committees.
- 040 More communication!
- O47 Be certain that the "grass roots" teachers get the necessary information on the planned activities.
- 060 Liaison person between county and district.
- 064 Stay alive.
- O79 Advertising for the individual speakers should be more interesting. You have a product to sell, yet often the very title of the program creates

#### disinterest.

- O83 Increase communication to local districts about programs. There is communication presently, but many people are unaware of what is occurring.
- 094 We need to spend more time alerting teachers to the possibilities of these opportunities.
- 097 More publicity so that teachers are aware of what is available to them through this committee.
- 104 Better advertising.
- 106 Make teachers more aware of what is being done.
- 129 Make their programs and activities better publicized in the larger school districts.
- 140 I believe more publicity is needed to present these programs to teachers as I have been unaware of their existence.
- 141 Keep teachers informed of new developments through newsletter.
- Send a representative to verbalize about upcoming workshops. The flyers don't always reach people. (This could be done at a staff meeting, rotating from school to school).

## Topics and Resources

Suggestions regarding topics and resources are presented in two major categories, as follows, the first, topics, being further subdivided into general and specific topical suggestions.

## Topics - Specific Suggestions:

Olf Undertake a study on effect of TV watching by students.

Explore possibility of 15/45 school year schedule.

Undertake a study on how parents can be responsible for homework and study time at home.

- Many teachers are interested in alternative career information either because of the possibility of lay-offs or as an inducement to early retirement.
- 064 Workshops involving teachers in self examination.
- O72 Subject area workshops involving teachers from all KISD schools. Mathematics, home economics, media, industrial arts, etc. People would benefit from a one-day hands on meeting if the right leaders were obtained.
- O84 Programs on teacher motivation would be more helpful than student motivation.
- 090 Inservice on stress -- so all teachers could attend.
- More involvement in programs dealing with gifted and/or talented students.

More involvement in Career Education.

Inservice which could stimulated educators to become more involved with future trends. Schools, to be effective, must keep up with the rapid changes found within society.

How do we combat current trends in private and/or parochial schools. Let's examine what is going on.

## 2. Topics - General Suggestions

- OO7 Arrange or plan for new ideas and concepts learned can be utilized in classroom and not cut due to funds or lack of materials.
- 008 Be more classroom and/or subject-area oriented.

Become more classroom-teacher oriented.

- 010 Keep in touch with student needs and wants.
- Ol6 Study teacher credibility in academic approach in classroom as opposed to activity approach.
- Ole one month of inservice on each subject matter.
- O38 Set up regular repeated "hands on" experiences for the services offered by KISD.

Display samples, teaching devices (teacher made) instead of so much commercial, publishing co. materials. The economy is forcing educators back to the days of creative teaching methods and materials instead of to the school-supply catalogue -- and it's about time! The most effective teaching aids are teacher made.

- O46 Be practical! Most of us have had as much theory as we want, and need useful "right now" materials.
- 049 Make workshops for all teachers in Kent County divided by subject or department area.
- O64 Perhaps more "how to" workshops in specific content areas.
- I attend two workshops a year put on by MITESOL —
  they plan a variety of mini-lectures on a variety
  of subjects we choose the ones we are
  interested in and they are helpful they are
  all in one area a college campus or big school.
  This is one way I enjoy a workshop. I know
  teachers need maintaining and upgrading. The same
  speech can't service or reach everyone.
- 078 Handouts should be more specific.
- O79 PSDC planners try to cover too diversified a group -- elementary to senior high and science to English. Therefore, they are often so general in content that a teacher leaves with nothing specific. The computer lecture this year showed this weakness.
- 096 Have hands-on activities and handouts.
- 108 More practical and less theory.

Have more variety at one time.

- Remember that my assignment is not like the typical classroom teacher's. I might participate in programs designed for my particular assignment (media center).
- 138 By conducting programs and/or activities that are of great interest to teachers.
- 141 Continue offering speakers on timely topics.
- 149 Have more activities.

#### 3. Resources

- O04 Taping of especially pertinent lectures could be done, and offered to all interested parties for viewing at convenient times.
- Ol9 Bring in noted speaker in the field for a panel discussion, with teacher groups as questioning audience.
- 027 The excellent speakers and presenters.
  - The opportunity to attend workshops with such gifted presenters.
- O28 Provide experts to lecture on specific techniques of instruction.
  - Provide people from other states to lecture.
- O31 By continuing the excellent service they are already presenting (a) top speakers from across the country, (b) inservice training, (c) special planning committees to help provide assessed needs.
- 047 Have college department heads give workshops on bringing teachers up to date.
- O57 Provide more county-wide inservices such as this year's. Top speakers can be brought in that an individual district can't afford.
- 058 Experts in areas of teachers' specialty or

- teachers at your level -- share techniques and strategy.
- 172 In-service meetings with another school district bringing in top-notch educational speakers from any area other than local people.
- Bring back speakers who have proven to be popular; and/or who are in the process of developing new theories, instruments, etc. For example, I would like to have Gregorac's workshop after I heard him speak. From reading the handouts, I only had a vague idea of what he had to offer. After hearing him, I'd like to have more knowledge of his theories.
- 090 Getting someone to give ideas on classroom management -- i.e., Chick Moorman (KVISD) -- excellent!
- 093 Speakers from outside the educational field.

## Location and Audience

Suggestions regarding the *location* and the *audiences* for Center Activities have been subdivided in two categories, as follows:

## 1. Specific Audiences:

- If a specialist could be sent to a particular school to work with certain departments whenever there is something of particular importance during the school year, it would be very helpful. In other words, a more active program by Kent PSDC instead of the passive-type program now in use.
- Oll Have programs in more areas of the community.
- Ol4 Provide on-site workshops involving most staff of an entire school. If I go to a great workshop and come back with lots of neat ideas, but none of the people I work with have been exposed to these

- ideas, then it's difficult to implement change.
- Ol9 Inservice in teachers' home building on related topics to that building. (They would need cooperation of Building Council and Principal.)
- Inservice in our buildings would help. Caledonia has not participated, lately, in the programs offered by PSDC. If we could get founding, I'm sure that we would.
- 035 Bring programs to schools.
- 041 District inservice programs.
- 042 More programs located in the individual school district.
- 079 I would prefer an inservice that directly reflected the needs of my individual school to the all-district meetings.
- 115 It would be nice if some of the better inservice could be done in the outlying areas of Kent County.
- Bring the programs to the individual school settings whenever possible (I would realize this would be difficult, but it would also be a way of familiarizing the participating schools with Kent PSDC.)
- PSDC could take more programs and workshops to the local level. Many activities are overlooked because of the distance and time involved going to the main center.
- The program offerings have been excellent but not enough people participate. There's a need for a large number of people per building (district?) to get excited by an activity so it can continue to generate back in the school. Otherwise, it often "dies on the vine" when only one or two people try to carry the ball. Perhaps speakers could be housed in buildings where whole staff is in attendance plus open to others in the county. If a whole staff could hear one good speaker per year there'd be more benefit than the "hit and miss" now used.

- 151 Provision of speakers and possible topics for building-level inservices.
  - More accessible consultive services at building level.
- 157 Inservice opportunities -- share district time -- 2-3 times per year.

## 2. Cooperative Programs

- Ol9 Small group of teachers in respective teaching assignments to brainstorm ideas in their field.
- 027 County-wide inservice days.
- 049 Arrange a rotation system where teachers visit other schools in the same department.
- 081 County-wide inservice (options).
- 102 More county-wide inservice programs.
- 139 Encourage more communication between teachers of the same grade level/subject from different districts.
- 151 Improve communication to general staff!
   Continue county-wide inservice -- excellent!
- Have teachers give input (in advance) about what they'd like to see presented. There are often many qualified presentors within the ranks.

## Scheduling

Suggestings regarding the *scheduling* of program activities are presented in four categories, as follows:

## 1. Need for Advanced Planning

- Ol2 Perhaps a general calendar for the year/semester showing scheduled activities planned would be of value!
- 046 Have a listing of possible areas of concern that workshops could be arranged for and list distributed quite far in advance. Spring for fall, etc. Then publish schedule 6-8 weeks in advance.
- 106 Update information at a general meeting when staff are together.

#### 2. After School Activities

- Workshops -- lectures could be held at a time more convenient to teachers who cannot get released time for a day, and at various locations. Most of the above are held during the day, and only offered once.
- O06 Scheduling Saturday workshops, seminars and the like.
- 038 Plan more workshops during the summer.
- 041 Workshops (at each system local), during after-school time --- not evenings or weekends.
- O47 Schedule workshops, inservice, etc. after school hours. Difficult in getting released time is a problem.
- 096 Start on time.
- 104 Fewer programs during school hours -- our district

does not encourage leaving our classrooms.

- 107 Find the time for greater participation: difficult to be released for inservice; no money; try different time periods.
- 108 Check with all schools to make certain the meetings do not conflict with required school times. There have been two that I know of this year where we could not attend.
- Perhaps Saturday offerings might have some appeal. I recently attended a conference on Saturday at M.S.U. and it was well attended.
- 138 Offer some of your programs after school hours.

#### 3. Release Time

- O06 Scheduling in cooperation with local school districts in order to provide inservice activities on school time without increasing the length of the 180-day school year.
- OO7 Develop inservice during school hours during preps or on days students are not in school.
- 028 Provide released time to attend inservices.
- 035 Provide more release time for teachers to attend.
- 047 Provide county-wide inservice meetings with released time for teachers.
- O60 Specific contract day or days negotiated for county-wide inservice -- perhaps one per semester.
- 079 Workshops and meetings are often night activities and as a working mother I find this impossible. it involves too much inconvenience and hassle for what I receive from the programs.
- 093 More inservice/released time programs.

## 4. Credit

- 045 Be sure such programs do not directly overlap current college course offerings in area.
  - Consider offering credit for sessions attended.
- Offer these workshops for college credit as many of us are working toward advance degrees.
- 104 More college credit.

#### Finances

Suggestions regarding financing of the center activities are presented in the following:

## 1. Financing

- OOS As PSDC is operating now I find it most beneficial in providing programs and activities for teachers. Sometimes the fee charged for lectures and workshops dissuades teachers form participating.
- 070 Closer cooperation with business community.
- 081 Provide funding for continued programs.
- Making changes in school environment or curriculum involves new money. Most schools are just hanging on or cutting deeply. It is one thing to present on idea, it is another to implement it.
- O96 Generate more funds so more people could take advantage of workshops.
- I believe many excellent programs are offered. But it is difficult to attend. There are no funds to pay registration fees. I must pay it if I want to attend.
- 119 Programs dealing with innovative sources of funding education. No \$ means no school.

- 129 Provide programs and services that are not easily duplicated by other systems.
- 139 Because nearly all federal/state grants on introducing new programs have been cut, perhaps PSDC could support and introduce these programs into interested communities.
- 157 Continue funding to bring similar programs of the past.

#### Other comments

- 001 Program is satisfactory.
- The programs are not necessary -- discontinue!

  The same is true of these so-called doctoral program questionnaires!
- 026 I liked the semi-county-wide inservice day in March.
- 053 You're doing it.
- 088 Seem to be doing a good job.
- 099 I think they are doing an excellent job.
- I am sorry, I think they are doing an excellent job. They only suggestion I have is that they might have a way to follow-up on the activities they sponsor. It might encourage the school to implement quicker.
