ABSTRACT

CHILD ACQUISITION OF THE ASPECT MARKER *-LE* IN MANDARIN

By

Hsiang-Hua Chang

Cross-linguistically, researchers have found a distributional bias of tense/aspect markers in child language, namely, children initially use past or perfective morphology with telic predicates and use present or progressive morphology with atelic predicates (Wagner 1998). One of the attempts to explain this phenomenon is the Prototype Account, which claims that children acquire a linguistic category starting with the prototype of the category and later extend its application to less prototypical cases (Shirai and Andersen 1995). Shirai and Andersen using data of three English-speaking children from age 1;6 to 2;4, argue that children do not distinguish between past/perfective and telicity, i.e. children at the early stage exclusively produce the past *-ed* with achievement verbs.

In this study, we present evidence from Mandarin natural speech data of two children from age 2;0 to 2;6 and 2;9 to 3;3, supporting the distributional bias found in other languages while opposing the use of the Prototype Account to explain such bias. Our evidence shows that Mandarin-speaking children do not collapse past/perfective/telic as a macro-category as arguably the English children do.

ACKNOWLEDGEMENTS

This project is the most emotionally challenging work I have ever done. For all the struggling and depression I have been through, I am amazed and grateful that I can be here writing acknowledgements. I thank my advisor, Professor Cristina Schmitt, for her prompt and detailed advice, for her valuable guidance and her hard work, showing me what an academic professional ought to be. I thank her enthusiasm about my work and her exceptional patience. I also thank her for encouraging me to attend professional meetings. Without her, this thesis could not have been done.

I am also grateful to the other members in my committee, Professor Yen-Hwei Lin and Professor Alan Beretta. I truly enjoyed their teaching and I appreciate their constructive suggestion about my work. I thank Professor Lin for being an excellent linguist who inspired me to pursue academic work in Linguistics. I also thank Professor Barbara Abbott and Professor Alan Munn for their precious comments. I also appreciate comments from audience in the 2001 annual meeting of Michigan Linguistics Society and in the 2002 joint conference of the IX International Congress for the Study of Child Language and the Symposium on Research in Child Language Disorders. My special thanks go to Professor Richard Weist. His dedicated work in aspect acquisition has set a good model for me. It is my honor to be able to discuss my work with him.

Finally, my gratitude goes to my parents and siblings for their financial and moral support. I thank my husband for his love and understanding. I could not have survived this challenge without him. I thank God for using this work to reveal my weakness to me and build me up. All glory to God for He makes the impossible become possible!

INTRODUCTION

The study of ASPECT is the study of event types as expressed by linguistic means. Aspect, which characterizes different ways of viewing the internal temporal constituency of a situation (Comrie 1976), has inspired many cross-linguistic studies in language acquisition. For children to acquire aspect, they need not only to grasp the meaning of verbs, but also the temporal properties of events given in many cases by a combination of tense and aspect morphology and properties of nominal expressions.

Studies of aspect recognize two kinds of aspect: lexical aspect and grammatical aspect. LEXICAL ASPECT, Aktionsart, expresses the inherent temporal properties of the predicate. Telic predicates, which involve logical end-points, can be found in accomplishment predicates such as *build a house*, or achievement predicates such as *fall* or *die*. Stative predicates such as *love* or *know*, and activity predicates such as *run* or *walk* are called atelic predicates because they exclude logical end points.

GRAMMATICAL ASPECT marks temporal viewpoints of an event by utilizing linguistic devices, such as inflections. In English, for instance, past tense and *have*-past participle are in many cases used to indicate perfective aspect as in *I wrote a letter* and *I have found my glasses*. Present tense and *be*-progressive specify imperfective aspect; for instance, *he walks* or *he is walking*.

The functions of both lexical aspect and grammatical tense/aspect have continually caught researchers' attention and the interactions between the two have also motivated various studies (Li & Bowerman 1998, Li & Shirai 2000, Shirai & Andersen 1995, Wagner 1998, to name a few). In language acquisition, a hypothesis called

*Labels used in this thesis: CL: nominal classifier, SFP: sentence final particle, GEN: genitive marker, QM: question marker.

ASPECT FIRST involving the interaction between lexical aspect and grammatical tense/aspect has been attested cross-linguistically (see Wagner 1998 and Bohnemeyer & Swift 2002 for a review). Researchers have argued that children initially use tense and grammatical aspect morphology to indicate lexical aspect and only later start to use them appropriately, namely, children first use past tense and/or perfective morphology to mark telicity, and use present tense and/or imperfective morphology to mark atelicity (Wagner 1998:86). The evidence consistent with Aspect First hypothesis that in child language past/perfective is connected with telicity and present/imperfective with atelicity implies that there may exist an early stage where children treat both past/perfective/telic and present/imperfective/atelic as combinations, or as what we will call 'macro-categories'. This implication serves as the basis of the PROTOTYPE account for the Aspect First hypothesis, which claims that children acquire a linguistic category starting with the prototype of the category, and later extend its application to less prototypical cases (Shirai and Andersen 1995). In other words, children acquire the category past starting by attaching it with its prototypes, which possess the features, [+telic], [+punctual], and [+result], as achievement verbs do. Shirai and Andersen's data of three English-speaking children from age 1;6 to 2;4 argue that in the initial stage children do not distinguish between past/perfective and telic, i.e. when they produce past inflections, nearly 100% of them appear with achievement verbs.

Following the Prototype account, when children are acquiring Mandarin, a language without tense morphology, they will first use perfective markers to mark telicity and use imperfective markers to mark atelicity. This prediction is attested in Li's experimental studies with Mandarin-speaking children from age three to six (Li 1990, Li

& Bowerman 1998, Li & Shirai 2000). A clear association is found between telic verbs and the so-called perfective *–le* (but see Klein et al 2000 and Sybesma 1999) and between atelic verbs and the imperfective aspect markers. They assert that these associations are more absolute than in the English data. However, because the distributional bias in these data becomes stronger with age, rather than weaker as the Aspect First hypothesis (and the Prototype account) predicts, Wagner (1998) raises doubts about whether child Mandarin supports the Aspect First hypothesis.

In this thesis, we present evidence from Taiwan Mandarin natural speech data of two children from age 2;0 to 2;6 and 2;9 to 3;3, supporting the distributional bias found in the older children in Li's research. Contrary to Shirai and Andersen's conclusion, we present evidence, based on the aspect marker *–le*, against the Prototype account showing that our subjects do not have a macro-category of past/perfective/telic marked by *-le*. Our evidence argues for a separation between past and perfective/telic and for a separation between perfective and telic in child Mandarin.

The thesis is organized as follows. First, we briefly introduce the lexical aspect and grammatical aspect markers in Mandarin and their interactions with special attention to *-le*. Also, the acquisition ordering of these aspect markers will be discussed. Next, based on the study of Shirai and Andersen and Li and Bowerman, we present an overview of the English and Mandarin evidence consistent with the Aspect First hypothesis and the Prototype account for these facts. Third, we discuss hypothesis associated with the Prototype account. Finally, we present our natural speech data to examine our hypotheses and predictions and argue for reexamining the Prototype assumptions regarding the acquisition of tense/aspect morphology in child language.

CHAPTER 1

ASPECT IN MANDARIN

In this chapter, we will first introduce the aspectual system in Mandarin and discuss the interactions between lexical and grammatical aspect.

1.1 Lexical Aspect

According to Smith (1997), lexical aspect, or situation aspect in Smith's terms, can be defined and exemplified as follows. (i) States are static and durative (e.g. *know*, *love*); (ii) activities are durative and atelic events (e.g. *laugh*); (iii) accomplishments are durative, telic events consisting of a process with successive stages and an outcome (e.g. *build a house*, *learn Greek*); (iv) achievements are telic, instantaneous events (e.g. *win the race*); (v) semelfactives are atelic, instantaneous events (e.g. *tap*, *knock*). The Mandarin examples of different lexical aspects are shown in (1a-e).

(1) a. wo renshi ta
I know he
'I know him.'

b. wo changchang xiao
I often laugh
'I laugh (very) often.'

c. wo gai-le yi-dong fangzi
I build-LE one-CL house
'I built a house.'

d. wo ying-le yi-chang bishai
I win-LE one-CL race
'I won a race.'

e. wo yizhi qiao men
I continuously knock door
'I keep knocking (the) door.'

There is a sub-category of verbs in Mandarin called Resultative Verb Compounds(RVC) (Li & Thompson 1981:54-68). They are called verb compounds because they are always made up of at least two elements, and each of their elements are verbs and can be used as a matrix verb independently. In the examples below, *da-kai* (hit-open) 'open' in (2a) is an RVC, and both *da* and *kai* can serve as a main verb on their own, as in (2b) and (2c), respectively.

(2) a. ta da-kai-le yi-san chuangfu
he hit-open-LE one-CL window
'He opened a window.'

b. ta changchang da ta meimei
he often hit his younger-sister
'He hits his younger sister (very) often.'

c. ta kai-le yi-ping jiu
he open-LE one-CL wine
'He opened a bottle of wine.'

As shown in (2a), the RVC *da-kai* is one verb functioning as a head for a verb phrase. The two verbs *da* and *kai* become one verb in RVC construction and together they share one aspect marker *–le* and assign thematic roles for the subject and object.

Consistent with Li & Shirai's proposal (2000), we argue that RVCs are achievements, not accomplishments (Smith 1997). We found that within the temporal clause of *de shihou* 'when,' only RVCs and achievement verbs can take *–le*, as shown in (4c), (5c), and (6b).

(3) a. ni ai ta de shihou, zenme mei xiang name duo (state)
you love her DE time, why not think so much
'When you loved her, why (you) didn't think so much?'

b. *ni ai-le ta de shihou...
you love LE her DE time...
'When you loved her...'

(4) a. ni kan ta de shihou, ta zai ku ma? (activity)
you see her DE time, she ZAI cry QM?
'When you saw her, was she crying?'

b. *ni kan-le ta de shihou...
you see-LE her DE time...
'When you saw her...'

c. ni kan-dao-le ta de shihou... (RVC)
you see-reach-LE her DE time
'When you saw her...'

(5) a. ?ta gai yi-dong fangzi de shihou... (accomplishment)
he build one-CL DE shihou...
'When he builds one house...'

b. *ta gai-le yi-dong fangzi de shihou...
he build-LE one-CL DE shihou...
'When he built one house...'

c. ta gai-hao-le yi-dong fangzi de shihou... (RVC)
he build-finish-LE one-CL DE shihou...
'When he finishes/ed building a house...'

(6) a. ta si de shihou... (achievement)
he die DE time
'When he dies/died...'

b. ta si-le de shihou
he die-LE DE time
'When he dies/died'

It is clear that all types of verbs can appear in their root forms in all of the (a) cases above. After adding the aspect marker *–le* to the stative verb *love* in (3b), the activity verb *see* in (4b), or the accomplishment predicate *build a house* in (5b), the sentences become unacceptable. One way to save (4b) and (5b) is to alter them into an RVC construction as in (4c) and (5c). This provides one strand of evidence to support the claim that RVCs are achievement verbs because only achievement verbs can take *–le* in this kind of temporal clauses, as (6b) illustrates.

There is another controversial class of words that needs to be discussed, namely, adjectives in Mandarin. Because adjectives can function as the head of the main predicate in Mandarin, Li & Thompson (1981) call them adjectival verbs. McCawley (1992) also argues that Mandarin does not have the category of adjectives. Two arguments most strongly present McCawley's viewpoints. First, 'degree and comparative expressions combine more directly with adjectives than with verbs.' Therefore, if *hao* 'good' in (7) is an adjective, the sentences in (8) are all supposed to be grammatical (McCawley 1992, 233-234).

(7) ta shi ye-ge hao ren
he be one-CL good person
'He is a good person.'

(8) a. *ta shi ye-ge hen hao ren
he be one-CL very good person
'He is a very good person.'

b. *ta shi ye-ge bu hao ren
he be one-CL not good person
'*He is a not good person.'

c. *ta shi ye-ge bi ni hao ren
he be one-CL than you good person
'He is a better person than you.'

d. *ta shi wode zui hao pengyou
he be my most good friend
'He is my best friend.'

The ungrammaticality of sentences in (8) makes it evident that *hao ren* 'good person' is a compound, not a phrasal unit, and *hao* 'good' is not an adjective because it cannot take degree modifiers.

Second, if *hao* 'good' is an adjective, the structure of '*hao* + noun phrase' should be productive. However, the acceptability of such a structure decreases as the length of the noun phrase increases, as shown in (9) (McCawley 1992: 235).

(9) a. yi-bei hao jiu
one-CL good liquor
'a glass of good liquor.'

b. yi-bei hao pijiu
one-CL good beer
'a glass of good beer.'

c. ?yi-bei hao putaojiu
one-CL good grape-wine
'a glass of good grape wine.'

d. ??yi-bei hao Shaoxing huangjiu
one-CL good Shaoxing yellow liquor
'a glass of good Shaoxing wine.'

McCawley claimed that if it is the phonology or morphology of these noun phrases that determine their acceptability, this argues that 'the rule licensing such combinations is one of word-formation rather than of syntax.' Thus, *hao* 'good ' is not an adjective and *hao jiu* 'good liquor' is a compound rather than a phrasal noun.

In addition to the previous statements, which argued that the so-called Mandarin adjectives do not behave as the universally defined adjectives, McCawley also asserted that Mandarin verbs are adjective-like because they can combine directly with degree and comparative expressions as exemplified in (10).

(10) a. wo hen xihuan ta.
I very like he
'I like him very much.'

b. wo bi ni xihuan ta
I than you like he
'I like him more than you do.'

We assume McCawley's argument that Mandarin adjective-like words are verbs; furthermore, in the next section, we will illustrate that Mandarin adjective-like verbs (henceforth we will call them 'adjectival verbs') behave as stative verbs.

1.2 Grammatical Aspect

Mandarin has no markers for tense, i.e. Mandarin does not use verbal affixes to signal the relation between the time of the occurrence of the situation (reference time) and the time that the situation is brought up in speech (speech time). Instead, the speakers use adverbial time phrases, such as *yesterday* or *next year*, to indicate time; however, time phrases are not required in grammatical sentences. Without time phrases, the addressee still can perceive the implication of time in the conversation or context. Since there is no tense morphology in Mandarin, aspect makers reasonably become the focus when studying how language encodes temporal relations.

It is not conclusive how many aspect markers there are in Mandarin. Although some researchers, such as Egerod (1994), Li and Bowerman (1998), and Li and Thompson (1981), suggest that there are other aspect markers or other grammatical aspect structures in Mandarin,[1] only four traditionally-agreed aspect makers will be discussed in this thesis, namely, the imperfective markers *zai*, *-zhe* and the perfective markers *–le* and *–guo*. The focus of this research is on the co-occurring relations between aspect markers and verb types.

1. For instance, Li and Thompson (1981:185) divide Mandarin verbal aspects into four categories — (i) perfective: *–le* and perfectivizing expressions, (ii) imperfective: *zai*, *-zhe*, (iii) experiential: *-guo*, (iv) delimitative: reduplication of verb. Here I only mentioned the four aspect markers, which are verbal affixes, namely, *-le*, *-guo*, *-zhe*, *zai*. Among these four markers, only *zai* is a preverbal affix, the others are postverbal.

1.2.1 The Imperfective Markers *zai* and *–zhe*

The markers *zai* and *-zhe* are always defined as imperfective aspect markers. The preverbal *zai* highlights prominent actions, as in (11). The second imperfective marker, a bound suffix *–zhe*, is usually added to a background verb[2] to provide a context for the main verb, as in (12).

(11) wo zai du-shu
I ZAI read-book
'I am reading now (so, Mom, don't ask me to do the laundry).'

(12) wo ting-zhe yinyue zuocai
I listen-ZHE music cook
'I cook while listening to the music.'

Zai is defined as a progressive marker. As the English progressive *be–ing*, there are restrictions where *zai* can be utilized. It can occur only with situations that include processes, such as activities, accomplishments, and semelfactives, as shown in the following examples.

(13) ta zai tiaowu (activity)
he ZAI dance
'He is dancing.'

(14) ta zai da dianhua (accomplishment)
he ZAI make telephone
'He is making a phone call.'

(15) wo zai qiao men (semelfactive)
I ZAI knock door
'I am knocking the door.'

2. Another usage of *–zhe* describes postures or locations, as shown in the example below.
qian-shang gua-zhe yi- fu hua
wall-on hang-ZHE one-CL painting
'(There is) a painting hanging on the wall.'

From all the sentences above, (13), (14) and (15), it is clear that the progressive *zai* is equally acceptable with the situation types of activities, accomplishments, and semelfactives.

In general, the progressive *zai* is incompatible with stative verbs, as shown in (16a), but it is possible to find contexts in which this construction is acceptable as in (16b). This is also true for adjectival verbs, which can be treated as stative verbs. In (17a), *feng* 'crazy' appearing with *zai* is unacceptable, except when the progressive reading is enforced in (17b)[3]. Besides stative verbs, achievements do not take *zai* either, as in (18).

(16) a. *ta zai ai ni (state)
he ZAI love you
'He is loving you.'

b. ni zai hen wo ma?
you ZAI hate I QM
'Are you hating me?'

(17) a. *ta zai feng (states)(adjectival verb)
he ZAI crazy.
'He is acting crazily'.

b. ta you zai feng
he again ZAI crazy
'He is again acting crazily.'

(18) *ta zai ying qiusai (achievement)
he ZAI win ball game
'He is winning the ball game.'

3. Notice that (17b) should be considered as a special case because in most cases, the progressive *zai-* cannot appear with adjectival verbs, such as **zai hao* 'ZAI good', **zai piaoliang* 'ZAI pretty', **zai hong* 'ZAI red'.

The other imperfective marker, *–zhe,* does not focus on progress as *zai* does, it provides a stative view of situations (Yang 1995:128). While one may find a sentence with a stative verb and *–zhe* vaguely correct as in (19a), Yang argues that *-zhe* usually does not appear with stative verbs, because states are stative in nature and adding a stative marker *–zhe* will be redundant. But it is acceptable to use *-zhe* with states if certain emphasis is intended as in (19b). The statement can be maintained if we use an adjectival verb as *mang* 'busy' in (20).

(19) a. ?Lili ai-zhe ta (state)
Lili love-ZHE he
'Lili is loving him.'

b. Lili sheng ai-zhe ta
Lili deeply love-ZHE he
'Lili is deeply loving him.'

(20) a. ?mama mang-zhe (state)(adjectival verb)
Mom busy-ZHE
'Mom is busy.'

a. mama mang-zhe gongzuo
Mom busy-ZHE work
'Mom is busy working.'

The imperfective marker *–zhe* can occur with semelfactives to get a repetitive reading as in (21) and work with activity verbs as *ku-zhe* 'crying' in (22a) to get a durative interpretation.

(21) ta qiao-zhe men han jiumin (semelfactive)
he knock-zhe door yell help
'While knocking the door, he yelled "help".'

(22) (Examples revised from Yang 1995:132)
a. ta ku–zhe gei mama xie yi-feng xin (activity and accomplishment)
he cry-ZHE to mother write one-CL letter
'While crying, he wrote a letter to Mom.'

b. *ta xie-zhe yi-feng xin gei mama ku
he write-ZHE one-CL letter to mother cry
'While writing a letter to Mom, he cried.'

(23) *ta yin-zhe qiusai (achievement)
he win-ZHE ball game
'*He is winning the ball game.'

For the other situation types, accomplishments and achievements cannot appear with *–zhe*, as shown in (22b) and (23) because they emphasize the outcomes or the process of the event and thus are not compatible with *–zhe*, which 'presents a continuous and stable situation without regard to endpoints' (Smith 1997). Sentence (22b) is not acceptable because the accomplishment situation *write a letter* conveys the process of writing and the outcome, a letter, and the dynamic feature of the verb *write* is not compatible with the stative feature of *–zhe*. In the same way, the achievement verb *win* in (23) focuses on the ending and cannot appear with the imperfective *–zhe*.

1.2.2 The Perfective Markers *–le* and *-guo*

It is widely accepted that *–le* and *–guo* are perfective markers in Mandarin. The major difference between *–le* and *–guo* is that the final state of *–guo* no longer obtains (Smith 1997). Take (24a) and (24b) for instance, they are identical except for the perfective markers.

(24) a. Zhangsan qu-le New York.
Zhangsan go-LE New York.
'Zhangsan went to New York.'

b. Zhangsan qu-guo New York.
Zhangsan go-GUO New York.
'Zhangsan has been to New York.'

In (24a), Zhangsan may or may not be in New York at the speech time, while the only reading for (24b) is that Zhangsan is no longer there. For this reason, *-guo* is usually called the experiential marker.

The perfective aspect marker *–le* has been a problematic issue in Mandarin syntax and semantics because there appear to be two *le*s: verb-*le* and the sentence final *le*. Considering two similar sentences in (25) and (26), it is likely that people may misunderstand the two *le*s as possessing the same meaning as shown in the similar English translation — 'I bought that book' and 'I have bought that book'.

(25) wo mai-le na-ben shu
I buy-LE that-CL book
'I bought that book.'

(26) wo mai na-ben shu le
I buy that-CL book SFP
'I have bought that book.'

Little wonders that some researchers, such as Li (1990), do not distinguish verb-*le* from sentence *le*. Yet most researchers, Li and Thompson (1981), and Sybesma (1999) among others, argue that verb-*le* and sentence *le* are not instances of the same morpheme. Viewing from its position in a sentence, we can define *-le* as a verbal suffix (verb-*le*) in sentence (25) or as a sentence final particle (sentence *le*) in (26). Verb-*le* always follows a verb while sentence *le* may be adjacent to almost any type of words, including verbs. For instance, the sentence final *le* is next to a noun in example (26). The two *le*s[4] have different roles in sentences (25) and (26), although these sentences have exactly the same

4. Other evidence for the distinction between verb-*le* and sentence *le* is from their counterparts in other Chinese dialects (Chao 1968). For instance, in the Shanghai dialect, *yi le-z ngu ziew kooyii chih ze* equals to Mandarin *ta lai-le wo jiu keyi zou le* (he arrive-LE I then can leave SFP) 'I can leave after he arrives.' The Shanghai *-z* and *ze* means verb-*le* and sentence *le* respectively. *Tzy* and *tze* of Suzhou dialect and *cox* and *lhoh* of Cantonese, counterparts of verb-*le* and sentence *le*, also support the proposal of the two instances of *le* in Mandarin.

elements — except the position of *le*. As pointed out in Sybesma, verb-*le* focuses on the completion of the event as illustrated in (25), which means that the buying event is finished. Sentence *le*, also called 'current relevant state' in Li and Thompson's monograph, on the other hand, implies that the state expressed in the sentence did not hold in the past, as in (26), which means 'I did not purchase that book before, now I got it.' Accordingly, we can understand how the two *le*s in (27) function differently: the verb-*le* indicates the completion of the activity while the sentence *le* specifies the new state that 'now I have bought that book'.

(27) wo mai-le nei-ben shu le
I buy-LE that-Cl book SFP
'I have bought that book (now).'

However, if a sentence final *le* occurs after a verb, as in (28), the problem arises whether this *le* is a verb-*le*, a sentence final particle or the combination of both.

(28) wo mai-le
I buy-LE/SFP
'I bought (it).'
'I am going to buy (it) (now).'

Lu (1975) argues that the major difference between verb-*le* and sentence *le* is that sentence *le* always gives us the implication of the change of states, i.e. if the sentence *le* appears in an affirmative sentence, it implies that the situation has changed from the negative state to the positive state — for instance, sentence (27) implies that 'I didn't buy that book before,' and the state has changed from 'didn't buy that book' to 'bought that book'. On the contrary, Verb-*le* does not provide this kind of implication but emphasizes on the happening of the event. Accordingly, *le* in sentence (28) is perfective –*le* if the event of buying is focused and it can be interpreted as 'I bought it.' In the reading of 'I am going to buy it now' as one may utter to a salesman after bargaining, *le* functions as

the sentence *le* stressing the change of state or a currently relevant state. Also, Li and Thompson (1981) argue that in a case where the sentence has the perfective meaning that is currently relevant, *le* is the combination of *–le le* and because *–le le* never occurs phonologically, we hear only one *le*. If their proposal sustains, *le* in (28) can also be interpreted as a combination of *–le le* because the event has perfective meaning — it is completed — and the event is currently relevant because the subject possesses the book now. Thus far, we may understand why previous researchers, such as Erbaugh (1985, 1992) and Li and Bowerman (1998), did not try to distinguish verb-*le* from sentence *le* in their data because a sentence final *le* can be interpreted in different ways as a verb-*le*, a sentence *le* or a combination of *–le* and *le*.

Fortunately, there is a way to help differentiate verb-*le* from sentence *le* — the use of the negation morphology *bu* 'not' and *mei(you)* 'not-(have)'. (*You* in *mei(you)* can be omitted.) Comrie (1976:82) has noted that *bu* 'not' negates sentence final *le*, while *mei(you)* 'not-(have)' negates verb *–le*. *Meiyou* and verb-*le* cannot co-occur. Therefore, to negate a verb-*le* sentence as (25) (repeated below as (29a)), one should add *meiyou* and drop verb-*le* as in (29b). The appearance of *meiyou* and verb-*le* together will make a sentence ungrammatical as (29c).

(29) a. wo mai-le na-ben shu (=25)
I buy-LE that-CL book
'I bought that book.'

b. wo meiyou mai na-ben shu
I not-have buy that-CL book
'I did not buy that book.'

c. *wo meiyou mai-le na-ben shu
I not-have buy-LE that-CL book
'I did not buy that book.'

By contrast, the position of the sentence final *le* in example (30a) is secure when *bu* 'not' is inserted to form a negation sentence as (30b) — *bu* and sentence *le* can show up together in a sentence.

(30) a. wo mai na-ben shu le (=26)
I buy that-CL book SFP
'I have bought that book.'

b. wo bu mai na-ben shu le
I not buy that-CL book SFP
'I am not going to buy that book.'

Contrary to the view of other researchers (Chao 1968 and Smith 1997), Yang (1995) argues that *–le* does not carry any sense of completion or termination; it seems to only indicate totality. Without providing any endpoint to situations itself, *-le* occurs only with verbs that are bounded or telic to express the totality of a situation. For instance, in sentences (31) and (32) *-le* works well with accomplishment and achievement verbs because they are telic and possess endpoints themselves. We can find that *–le* and a bare noun argument can appear with the accomplishment predicate in (31a). If the object argument has a classifier as in (31b), the sentence is also grammatical. Likewise, the perfective marker *-le* works well with achievements in (32). It is also no problem for *-le* and a classifier to appear in the same sentence with an achievement predicate in (32b).

(31) a. ta jian-le toufa (accomplishment)
he cut-LE hair
'He had a hair-cut.'

b. ta gai-le yi-dong fangzi
he build-LE one-CL house
'He built a house.'

(32) a. ta-de mama si-le (achievement)
he-GEN mother die-LE
'His mother died.'

b. ta ying-le yi-chang qiusai
he win-LE one-CL ball game
'He won a ball game.'

Being different from the perfective marker in some languages which can co-occur with all situation types, *-le* is not acceptable with the situation types of states, activities, and semelfactives — because they are atelic or unbounded. In (33a), the stative verb *ai* 'love' is acceptable without any aspect markers. When the stative verb is used with the perfective marker *–le*, the sentence (33b) becomes unacceptable, unless endpoints are provided, as in (33c) where the adverbial phrase *san-ge xueqi* 'three-CL semester' offers an endpoint and makes the sentence a bounded event.

(33) a. Lili ai ta (state)
Lili love he
'Lili loves him.'

b. *Lili ai-le ta
Lili love-LE he
'Lili loved him.'

c. Lili ai-le ta san-ge xueqi
Lili love-LE he three-Cl semester
'Lili loved/has loved him for three semesters.'

The adjectival verb, *feng* 'crazy' in (34a), can also be used in a grammatical sentence without any aspect markers. However, in sentence (34b), the adjectival verb can co-occur with *–le*. This appears to contradict what we just said. Recall that when we have a verb-*le* that is also sentence final, as in (34b), the meaning of *-le* will be ambiguous. Fortunately, the existence of a temporal adverbial phrase, such as *yi-ge xingqi* 'one week' in (34c), can make clear that adjectival verbs serve as verbs because they can appear with an unambiguous verbal suffix *–le*.

(34) a. Lili hen feng (state)(adjectival verb)
Lili very crazy
'Lili is very crazy.'

b. Lili feng-le
Lili feng-LE/SFP
'Lili has been crazy.'

c. Lili feng-le yi-ge xingqi
Lili crazy-LE one-CL week
'Lili has/had been crazy for a week.'

After making clear that *feng* 'crazy' functions as a verb, we are still puzzled by the acceptability of *–le* occurring with a stative verb in (34b), which contradicts the observation found in (33b) that stative verbs cannot appear with *–le*. Some other examples, such as (35) and (36), also indicate the acceptability of stative verbs with the perfective *–le*.

(35) ta you-le qian jiu wang-le lao pengyou
he have-LE money then forget-LE old friend
'As soon as he had money he forgot his old friends.'

(36) ta-de yangjing hong-le yi-ge xingqi hai mei hao
he-GEN eye red-LE one-CL week still not good
'His eyes have been red for a week and haven't recovered.'

In sentences (34b-c), (35) and (36), one possible interpretation is that the situations, *crazy*, *have money* and *red eyes*, still sustain in the speech time. These cases suggest that *–le* may encode meaning other than 'the totality of the situation' as Yang proposed. In fact, as Comrie (1976) has observed, the perfective marker *–le* specifies the ingressive viewpoint of the situation in these sentences:

> In many languages that have a distinction between perfective and imperfective forms, the perfective forms of some verbs, in particular of some stative verbs, can in fact be used to indicate the beginning of a situation (ingressive reading).
>
> In Mandarin...both adjectives and verbs, that normally refer to a state can have ingressive meaning in the Perfective. (Comrie 1976:19-20)

In summary, perfective *–le* usually does not co-occur with stative verbs, such as *ai* 'love', but it can appear with some specific stative verbs, like *you* 'have' or *hong* 'red' to mark the inception of the state.

Activity verbs, which are unbounded and atelic, cannot be used with *–le* either, as in (37a). Sentence (37a) may be good if *le* is a sentence final particle and the whole sentence means 'he escaped', but this sentence is unacceptable with the intended meaning. After adding a bare nominal argument, as in (37b), the sentence is still problematic. The appearance of a nominal with a classifier can provide an endpoint in (37c), and makes the sentence grammatical.

(37) a. #ta pao-le (activity)
he run-LE
'He ran.'

b. ?ta pao-le malasong
he run-LE marathon
'He ran marathon.'

c. ta pao-le yi-chang malasong
he run-LE one-CL marathon
'He ran a marathon.'

Semelfactives are atelic, but they can be both bounded and unbounded. That explains why sentence (38a), in which a semelfactive verb occurring with *–le*, is only marginally acceptable because the situation can be either bounded or unbounded. Semelfactives need an extra delimiting mechanism, such as *yi-ge xiawu* 'one afternoon', a quantifier phrase in (38b), to provide endpoints and make the sentence grammatical.

(38) a. ?deng shan-le (semelfactive)
light flash-LE (revised from Yang 1995:118)
'The light flashed.'

b. deng shan-le yi-ge xiawu
light flash-LE one-CL afternoon
'The light flashed for an afternoon.'

Based on the interactions between *–le* and different situation types, we agree with Yang that endpoints are expressed usually by the verb itself (e.g. *die, win*) or the arguments of the verb (e.g. *build a house*). In Mandarin, *-le* is incompatible with stative, activity and semelfactive verbs, but after adding a quantifier phrase, which offers endpoints to the situation, the ungrammatical sentences become acceptable as shown in (33c), (37c), and (38b). Yang proposes that because endpoints are already included in the verb phrase, *-le* does not provide any endpoints and thus *–le* is not to mark termination nor completion, but rather to denote an event as a whole.

While whether *–le* conveys termination or not is debatable, it is assured that another perfective marker *-guo* can specify termination and thus is compatible with all situation types, as illustrated in the following examples:

(39) a. wo ai-guo (state)
I love–GUO
'I have loved.'

b. wo kuaile-GUO (state) (adjectival verb)
I happy-GUO
'I have been happy.'

c. wo xiao-guo (activity)
I laugh-GUO
'I have laughed.'

d. wo gai-guo yi-dong fangzi (accomplishment)
I build-GUO one-Cl house
'I have built a house.'

e. wo ying-guo (achievement)
I win-GUO
'I have won (before).'

f. wo qiao-guo men (semelfactive)
I knock-GUO door
'I have knocked the door.'

The function of the suffix *–guo* emphasizes that the subject of the sentence has the experience of the specific event; thus, *–guo*, as mentioned before, is also called the experiential aspect marker. For this reason, sentences (39a-e) can be best described as indicating that the subject has had the experience of 'love, being happy, laughing, building a house, and winning,' and the event of 'knocking the door' has been performed at least once.

To sum up, the similarity of the two Mandarin perfective markers is that they both can cover the whole event, while *–guo* emphasizes the termination of the event and the experience of the subject, but *–le* does not.

From the discussions above, we can ensure that grammatical aspect markers interact with verb types (i.e. lexical aspect). These interactions are summarized in the table below.

Table 1 Interactions between grammatical aspect and lexical aspect in Mandarin

SITUATION TYPES	PERFECTIVE MARKERS		IMPERFECTIVE MARKERS	
	-le totality or ingressive view	*-guo* termination and past experience	*zai-* progressive view	*-zhe* stative view
States[i]	×[ii]	✓	×[iii]	×[ix]
Activities	×	✓	✓	✓
Accomplishments	✓	✓	✓	×
Achievements	✓	✓	×	×
Semelfactives	×	✓	✓	✓

i. Stative verbs include adjectival verbs.

ii. The exception is that *–le* can appear with stative verb where it denotes the ingressive viewpoint of the situation.

iii. It is grammatical to use *zai* with stative verbs when trying to force a progressive reading as in (16b), repeated here.

(16)b. ni zai hen wo ma?
you ZAI hate I QM
'Are you hating me?'

iv. Exceptions are when certain implication or emphasis is intended such as in (19b), repeated here.

(19)b. Lili sheng ai-zhe ta
Lili deeply love-ZHE he
'Lili is deeply loving him.'

In summary, focusing on the perfective *–le*, no matter whether *-le* marks completion, termination or totality of the event, it gives us an external viewpoint of a situation, and this clearly contrasts with the imperfective marker *zai* which provides an internal view of the event. Because this contrast between perfective and imperfective markers is found not only in Mandarin, but also in other languages, it is plausible to compare the grammatical and lexical aspect interaction in Mandarin with that in other languages, despite the fact that the aspectual system in different languages has different properties. Among the specific properties of *-le* is the fact that it can appear with telic verbs (accomplishment or achievement), but cannot appear with atelic verbs (stative, adjectival, or semelfative verb), unless some mechanisms such as a quantifier phrase is used to provide a boundary to the situation denoted by atelic verbs.

Furthermore, there are two different *le*s in Mandarin, perfective-*le*, which is a verbal suffix, and sentence final particle *le*, which appears at the end of a sentence and may follow any kind of phrases, e.g. verbal, nominal, or adverbial phrases. In many cases, it is difficult to identify whether a sentence final *–le* is a perfective *–le* or a sentence *le*, but we have mentioned earlier that negation is a way to distinguish between the two, and we will elaborate more on this point later.

1.3 Acquisition Ordering of the Mandarin Grammatical Aspect

Based on the natural speech data of four two year-olds, Erbaugh (1992) summarized that the acquisition sequence of the four aspect markers in Mandarin is the following: (i) *–le* (before 2;4), (ii) *zai* (around 3;0), (iii) *-zhe*, and (iv) *–guo*.

Erbaugh (1992:425) claims that young children first master whichever time/aspect system their language makes central. Thus, young English speakers contrast past tense to progressive/simple present, young Spanish speakers contrast perfective with imperfective, and young Mandarin speakers should master perfective. (It is notable that she does not explain what makes these central in the respective languages.) In her studies, within 64 hours, children produced up to 2300 *le*s (because many were ambiguous between the perfective *-le* and the sentence *le*, she does not separate the two *le*s). This contrasts with 108 imperfective *zai*s, 50 *–zhe*s, and 34 experiential *–guo*s. Without providing statistical evidence, Erbaugh indicates that adult speech data also reveal a similar distribution, which entails that *–le* is the most used aspect marker in Mandarin.

Erbaugh notices that children use *–le* selectively. Children understand that *–le* typically co-occurs with past: 85% of *-le* refers to the past. According to her, *-le* is usually used to describe ongoing, visible events, such as *da-po-le* (hit-break-LE) '(it is) broken.' Some 85% of their event times refer to the immediate past. The real time for the events mentioned by the children is summarized in table 2.

Table 2. Real time for events mentioned (speakers < 2;3)

	Past	Present	Future
Overall Speech	25%	13%	62%
With *–le*	85%	7%	8%

(quoted from Erbaugh 1992:425)

Generally, the child is the agent of an action in the immediate past. 73% of the early *–le* describe the child's own actions. 11% are actions of the objects that the child was manipulating. The remaining 13% are actions of the characters in picture books that the children were pointing to (see table 3). Erbaugh claims that children, as adults, often

use *–le* to call attention to a noteworthy change of state, such as breaking a cup or finishing a block tower.

Table 3. Agent of the situations marked by *–le*

	The child	Objects being manipulated	Characters in books
Situations marked by *-le*	73%	11%	13%

While children adopted perfectives for self-reference, 50% of their imperfectives *zai* and *-zhe* described someone other than the child, because according to her, a longer or repeated action by another person may give the child enough time to describe an event as sustained. All the progressive *zai*s are correctly formed with activity verbs. Children never use *zai* incorrectly with a stative verb. However, progressive markers remained rare until they turned three years old.

After about two and half years old, children start to use the other perfective marker, *–guo*, once in a while. They typically use *–guo* to represent recurring activities and actions such as seeing, sleeping, and eating, rather than unique experiences (Erbaugh 1992:428-429).

Erbaugh's study found that *–le* is the first acquired aspect marker and it is used more predominantly than the other aspect markers. Also it seems that *–le* and past (unmarked in Mandarin) tend to appear together because 85% of *–le* is used to indicate past events as shown in table 2.

CHAPTER 2

THE DISTRIBUTIONAL BIAS OF ASPECT MARKERS IN CHILD LANGUAGE AND THE PROTOTYPE ACCOUNT

In various child languages (e.g. English, French, Polish, Greek, Japanese, and Mandarin), researchers have discovered a strong relation between specific grammatical aspect and lexical aspect (see Wagner 1998 and Bohnemeyer & Swift 2002 for a review). These observations have motivated what has been called the Aspect First hypothesis:

> Children initially use tense and grammatical aspect morphology to mark lexical aspect. In particular, children initially use present tense and/or imperfective morphology to mark atelicity and use past tense and/or perfective morphology to mark telicity.
>
> (Wagner 1998:86)

One of the accounts trying to explain the Aspect First phenomena is called the Prototype account (Shirai & Andersen 1995). The Prototype account assumes a graded category membership and proposes that a category has its best exemplar(s), the prototype(s), and peripheral members. It differs from the classical theory of categorization, which assumes an all-or-nothing membership based on critical features. In language acquisition, the Prototype account predicts that children acquire a linguistic category starting with the prototype of the category, and later extend its application to less prototypical cases. Following this hypothesis, children acquire past/perfective morphology by first attaching it to its prototypes, achievement verbs, and later to other type of verbs, the less prototypical cases. In the same way, children acquire present/imperfective morphology by using it with activity verbs and later with other types of verbs. The following studies in English and Mandarin present evidence in accordance with the Prototype account.

2.1 The English Data

Shirai and Andersen (1995) used the data of three English-speaking children, i.e. Adam (2;3-4;10), Eve (1;6-2;3), and Naomi (1;6-4;9), from Child Language Data Exchange System (CHILDES), and carefully coded the verbs into four types: state, activity, accomplishment and achievement. They argue that the important roles involved in tense-aspect acquisition are the inherent lexical aspect of verbs, mothers' input and children's concepts of the prototypes of tense/aspect morphology. They found that children start using past inflections predominantly with achievement verbs and progressive inflections with activity verbs; and the same distributional bias is found in the speech of the mothers addressed to children.

In the speech data of the three mothers, past inflections are used more frequently (58-64%) with achievement verbs and progressive inflections (53-61%) with activity verbs. The acquisition patterns for past and progressive morphology among these three children in the initial stage also present a similar distribution: they primarily associate past marking with achievement verbs (94-100%), and progressive inflection with activity verbs (58-75%). Although these children also use progressive inflection with achievement verbs to a considerable extent, 24-32%, Shirai and Andersen account for this fact by stating that progressive morphology was acquired earlier than past tense, i.e. before the stage they examined. Thus, the progressive inflection was used with all types of verbs while the past tense is mainly used with achievements. In general, the data of mothers and children both support the distributional bias of tense/aspect morphology found cross-linguistically and are in accord with the prediction of Aspect First hypothesis.

Accordingly, Shirai and Andersen claim that this distributional bias found in child language can be explained by the effect of the 'motherese'.

At the first stage of acquisition, these English-speaking children's almost exclusive use (94-100%) of the past inflection with achievement verbs provides evidence for the argument that initially children do not distinguish between past/perfective and telic, i.e. when they produce past morphology, almost all of them appear with the telic verbs. And this inability of young children to distinguish between past, perfective, and telic supports the Prototype account that children acquire past morphology by first associating it with its prototype, the achievement verbs, and later with the other peripheral members, i.e. accomplishment, activity, and stative verbs.

2.2 The Mandarin Data

The Aspect First hypothesis is also justified in Mandarin according to the experimental study of Li and Bowerman (1998), which illustrates the importance of telicity in lexical and grammatical aspect interaction. They designed three experiments to test children aged from 2;9 to 6;4 on their understanding of the aspect markers by using verbs with six different categories of lexical aspect — states, activities, accomplishments, achievements, semelfactives, and mixed telic-stative (e.g. *wear*).

The first experiment was a study testing the comprehension of aspectual distinctions. In this sentence-picture matching experiment, 135 children were divided into three groups with mean age 4;2, 5;1 and 6;0. The children were presented a pair of pictures and listened to two sentences using the same verb with either *-le* or *zai/-zhe*. Their task was to match the two sentences with their representative pictures.

A total of ninety-nine children[5], divided into four groups with mean ages 3;2, 4;1, 5;1, 6;1, participated in the second experiment, a production task in which children were asked to describe situations performed by toys, such as a doll canoeing, or a car knocking down a bridge. Right after completing the production experiment, 72 children, who were divided into three groups with mean ages 3;2, 4;1, and 5;1, took part in another experiment called 'teaching the puppet to speak.' This is an imitation task, in which children were asked to repeat what the experimenter said to the puppet.

The results of the comprehension and imitation task are consistent — children of all ages comprehend the perfective *-le* better with telic verbs (resultative, achievement, and accomplishment verbs) than with atelic verbs (activity and semelfactive verbs), and they comprehend the progressive marker *zai* better with atelic verbs than with telic ones. For stative verbs, children understand the imperfective marker *-zhe* better than *–le*, while for the mixed telic-statives, which depend on the aspect marker to indicate a telic action or a state, is understood well with both *–zhe* and *–le* (Li & Bowerman 1998). In the production task, children used *–le* (92-100% in different groups) and almost no *zai* (0% to 8%) with achievement verbs and what they called locative accomplishment verbs, such as *qu xuexiao* 'go to school.'

This research is consistent with the Aspect First hypothesis that children use imperfective markers, *zai* and *–zhe*, with atelic verbs to mark atelicity and use the perfective marker *-le* with telic verbs to specify telicity.

5. Some children for the second experiment also participated in the first experiment with at least 48-hour intervals.

In order to explain this phenomenon, Li and Bowerman first comment that 'the prototype hypothesis appears promising for explaining the acquisition of tense and aspect, while how a prototype is formed and modified has not been clear' (1998:341). They emphasize the role of input in this distributional bias and claim that the connectionist approach may provide a better mechanism to explain how children form statistical patterns by analyzing the input. They propose this statistical process as follows:

> Children can pick up on patterns in the input through a process of correlating the features of situations with lexical items, or by correlating sets of features that turn up repeatedly across lexical items with particular grammatical markers (e.g. English past tense *-ed* or Mandarin perfective *–le*).
>
> (Li & Bowerman 1998:342)

They suggest that this connectionist model may be able to solve the problem of forming prototypes because this model focuses on 'children's ability to detect patterns in the linguistic input, possibly through the formation of prototypes by connectionist networks' (p.343).

2.2 The Prototype Account

To account for the distributional bias of Aspect First hypothesis, Shirai and Andersen (1995) argue that what English-speaking children do is attaching the past inflection to the prototype of the category past, i.e. [+telic], [+punctual], [+result]. For example, the three children first marked past tense mainly on verbs such as *broke* or *fell* which possess all features of the prototype. Because the prototypes of past tense and perfective aspect are very similar, it appears that children are using past tense to encode perfective aspect or the inherent lexical aspect of telicity/punctuality. This is where the

macro-category of past/perfective/telic[6] occurs.

They claim that it is difficult to determine whether children use past morphology to encode past tense or perfective aspect. They refer to Dahl's statement (1985:78) that 'the prototypical perfective refers to a single punctual event occurred in the past with a clear result or end state.' This assertion not only makes the prototype of category past and that of category perfective very 'similar' as Shirai and Andersen described, but makes them almost identical. The Prototype account explains that because of this near identicalness of prototype past and prototype perfective, past morphology appears to mark perfective aspect or lexical aspect of telicity. In other words, early past morphology encodes under-extended past tenses by attaching only to prototypical past and encodes lexical aspect features such as completive, perfective, punctual, telic, etc. In sum, children initially restrict their use of tense/aspect inflections to the prototype of the category — recall that in the earliest stage, near 100% of the past *–ed* produced by their children appears with telic verbs — then gradually extend the category boundary, and eventually acquire the adult norm.

The advantage of the Prototype account is that it provides logic for the initial state in child language, i.e. the distributional bias of aspect markers, and it can account for the developmental change. On the other hard, its disadvantage is that it goes against the strong Continuity hypothesis, which proposes that child's intermediate grammar

6. Although Mandarin does not have tense morphology, to mix up perfective with past is not impossible. Because the concept of perfectives is difficult to comprehend for teachers and students who do not have the knowledge of linguistics, sometimes the meaning of *–le* will be over-simplified as a past tense marker. This definition is misleading from the linguistic perspective. However, if we consider the difficulty a young child or a foreign-language learner will encounter when learning a tenseless language as Mandarin, perhaps, it is excusable to mix up aspect with tense.

must be subsets of the adult grammar. Also it assumes the values of aspect markers without scrutiny; for instance, for Mandarin data to support the Prototype account, it assumes that children know the meaning of *–le* as perfective, although this does seem circular because if children knew the meaning, they would use it as adults do.

CHAPTER 3

THE NATURAL SPEECH DATA IN CHILD MANDARIN

3.1 Hypotheses and Predictions

The hypothesis we examine is the Prototype account of Shirai and Andersen (1995) which argues that past/perfective/telic is a macro-category for young children, as discussed in the previous section. One of the questions to address in our study is whether Mandarin-speaking children have this macro-category. If the answer is positive, Mandarin-speaking children may treat *-le* as a marker of past/perfective/telic, which predicts that *-le* will show up with telic verbs mainly in past contexts.

If children are not using *–le* as a grammatical aspect marker, but as a lexical aspect marker to mark the telicity of the verbs as the Aspect First hypothesis predicts, then regardless of the time reference, every time *-le* appears, a telic verb should also appear, at least in the case of resultatives.[7] In other words, *-le* should show up predominantly with telic verbs in both past and non-past contexts. If this proves to be true, then it will argue for a combination of perfective/telic, and against a mixture of past/perfective/telic in child language as the Prototype account predicts.

Lastly, if children possess the adult-like knowledge and know that past, perfectivity, and telicity are distinct categories, evidence is expected to support a

7. Whether a predicate is telic or atelic depends on both its verb and arguments, for instances, *build* and *build houses* are atelic while *build a house* is telic. Given the fact that young children have such short MLU, it is not uncommon that the objects are missing. Therefore, it is difficult to identify whether children use *build* as telic or atelic if no objects present. Fortunately, the cases of resultatives, as the achievement verbs like *win* or *die*, are defined as telic without question.

separation between past, perfectivity, and telicity. A further question concerns the fact that there are two *le*s in adult Mandarin, which are syntactically and arguably semantically distinct from each other. Do children show a similar knowledge of the two *le*s? If Mandarin speaking children use two *le*s differently as the adults do, then it will be clear that Mandarin evidence does not support the Prototype account for the acquisition of aspect markers, which predicts Chinese children to predominantly use *-le* as a marker for the macro-category, past/perfective/telic.

3.2 Methodology

Longitudinal spontaneous speech data were collected for this study because they have the following advantages. In spontaneous speech studies, children are recorded in settings, such as home or neighborhood playground, where they feel most comfortable to talk freely (Demuth 1996). Natural speech data is least likely to be influenced by inappropriate experimental task demands or the required repeated measures of the similar test which affect children's performance. These are particularly advantageous when investigating the early stages of acquisition in young children (Stromswold 1996).

3.2.1 Participants

Given that it is relatively impractical to study one child for a very long period of time, it is helpful to collect data from children of overlapping ages. This strategy is especially useful when studying a topic as ours where little acquisition work has been done (Demuth 1996).

Two children (one girl, NaNa, and one boy, DiDi) were selected for this study. Both of them were from Taiwanese families lived in the Michigan State University community and the main language being used at home was Mandarin. NaNa's speech was recorded from age 2;0 to 2;6 (MLU(Mean Length of Utterances):1.69 to 3.18) and DiDi's speech was recorded from age 2;9 to 3;3 (MLU:2.34 to 3.57). The language production of both children fell in the period when the MLU is between 1.75 and 4 morphemes, which is arguably the morpho-syntactically interesting period (Demuth 1996:4). Nana did not go to preschool until the last recording. Didi had attended a day care center, where English is used, for five months before the onset of the research.

3.2.2 Procedure

The investigator who is a native speaker of Mandarin from Taiwan recorded each subject for about two hours once every two weeks[8] for six months in times that were agreed by the parents.[9] The children were recorded with a tape recorder in their homes or playgrounds in their regular activities: playing with toys, story reading, eating, or interacting with their parents, siblings and the investigator.

3.2.3 Coding

For research that focuses on lexical and morpho-syntactic rather than phonological or phonetic issues, usually a broad phonemic (rather than narrow phonetic)

8. In the famous Brown's (1973) study, Eve was recorded for at least half an hour every week, and Adam and Sarah were recorded for about an hour every two weeks.

9. This project is approved and numbered as IRB# 00-052 CATEGORY: 2-F, 2-G by the University Committee on Research Involving Human Subjects.

transcription is used. For instance, Brown (1973) used the orthographic conventions of English for transcription. We used *Pinyin*, the official Chinese Romanization system used in China, to transcribe the data in order to fit in the transcription format of the Codes for the Human Analysis of Transcripts (CHAT) used by the CHILDES at Carnegie Mellon University (MacWhinney 2000).

In a tonal language such as Mandarin, tonal information is obligatory to capture lexical or syntactic[10] information. The numbers 1, 2, 3, 4 are used immediately following each syllable to mark the level tone, raising tone, fall-raising tone, and falling tone, respectively. A syllable without tonal indication has a neutral tone. There is a phonological phenomenon called Tone Sandhi (Li & Thompson 1981) in Mandarin, which depicts the change of tones when syllables are put together. For instance, if two consecutive syllables both possess the fall-raising tone, the first one will switch to a raising tone, such as *shui3jiao3* 'water dumpling' will become *shui2jiao3*. Tone Sandhi is not marked in the transcription. The original tone of the syllable is used instead.

In this study, MLU[11, 12] is counted basically in terms of morphemes, rather than

10. The tone of a grammatical morpheme in Mandarin is usually neutral.

11.Erbaugh (1978:32) states that 'MLU measurements for Chinese are about as valid as those for English'. She also points out that MLU measurements may underestimate the language development of Chinese children because Chinese lacks grammatical morphology, such as tense, gender or case. Her assertion is that Chinese children may be mis-identified to belong to a lower stage of language development because of the seemingly shorter MLU. However, this argument is purely conceptual and is not based on any empirical evidence.

12. Caselli et al (2002) recently studied two groups of children, 233 English-speakers and 233 Italian speakers, and asked their parents to report the three longest utterances produced by each child. They first made the corrected versions for each sentence, which they assume to be 'the target' utterances, and then use five different ways to code both the actual child utterances and the target sentences. Italian has a richer morphological system than English does because Italian marks gender, case, etc.; thus, it is not surprising that Italian children have longer MLUs on all measures. But, they found that the ratio of actual MLUs to target MLUs do not differ between Italian and English, which implies that although languages are different and there are different ways to code speech data, MLU remains valid in child language studies.

words or Chinese characters, which is one character for one syllable. We followed the commonly accepted notion that a morpheme is 'the smallest meaningful linguistic unit' (Cairns 1996) while at the same time we utilized particular coding methods to better match our research focus. For instance, instead of assuming that children possess adult's knowledge of morphology, we took a more conservative way and followed the suggestion from CHAT Manual (p. 52 and 161) (included in MacWhinney 2000) to treat some compounds, such as *bathing-suit*, *High-street*, or *Santa-Claus*, as one morpheme. However, one should notice that *Santa-Claus* in (40a) is treated as one morpheme because the child used it as an unanalyzed chunk. In the same recording, the Chinese counterpart of *Santa-Claus*, *shengdan laogonggong* 'Christmas old-man', was coded as two morphemes because the child was able to produce both *shengdan laogonggong* in (40b) and *laogonggong* in (40c). This implies her competence of separating *shengdan* 'Christams' and *laogonggong* 'old-man' as two morphemes.

(40) a. uhuh, Santa-Claus. (NaNai, file 5, age: 2;3.17)
1 (length of utterance:1) (line 662)

b. Shengdan laogonggong. (line 741)
1 2
Christmas old-man
'Santa Claus.'

c. laogonggong zai shuijiao. (line 803)
1 2 3
old-man ZAI sleep
'The old man is sleeping.'

Regarding the morpheme counts for Resultative Verb Compounds, we assume Li and Thompson's argument (1981:45-46) that although a compound is like a single word referring to a single object or action, it can be analyzed into two or more meaningful morphemes. In example (41a), because the two elements of the Resultative

Verb Compound *po-diao* (break-drop) 'break-off' can both serve as matrix verbs, *po* 'break' in (41b) and *diao* 'drop' in (41c), they are counted as two morphemes. Also, grammatical morphemes, such as the aspect marker *–le* and the nominal classifier *–ge* in (41a), are counted as one morpheme.

(41) a. zhe-ge po-diao-le. (NaNai, file 3, age: 2;1.24)
1 2 3 4 5 (length of utterance:5) (line 1211)
this-CL break-drop-LE
'This (thing) broke off.'

b. zhe-bian shi po-le. (line 1752)
1 2 3 4 5
this-side be break-LE
'It is true that this side has broken.'
(The copula *shi* can be used to express 'it is true that...'(Li & Thompson 1981:151)

c. diao-le. (line 2070)
1 2
drop-LE
'(something) dropped.'

Besides, based on Brown's rules for calculating MLU in English data (1973:54), we applied some rules, as summarized in Table 4, when transcribing our Chinese data to avoid inaccurate counts of MLU.

For further data analysis, we used The Computerized Language Analysis (CLAN) program form CHILDES. The frequency program, 'freq', helps us to make a complete list of all of the strings that appear in a transcript and allows us to search manually in this list for all verbs (including adjectives) and aspect markers (including sentence final *le*). Afterward, the CLAN program, 'kwal' (key word and line) is utilized to pull out a specific number of lines (usually two or three lines) immediately preceding and following a target utterance to help clarify the meaning and time reference of the

utterance and to identify imitations, mis-transcriptions, ungrammaticality, and other errors that should be taken into consideration.

Table 4. Principles for calculating MLU

- To avoid stammering to make the utterance longer, identical consecutive words are coded as one word by either following the CHAT program to code single word repetition, for instance, *ni3 ni3 ni3* 'you you you' is coded as *ni3(*3)* for three instances of 'you', or write a note in the comments column (a separate line in the database) about how many times a multi-word string repeated.

- For cases where utterances are interrupted by another speaker, we chose to transcribe conservatively and count them as separate utterances.

- For intelligible words (usually because of the acoustics) a special mark, i.e., *xxx*, is used to indicate that the child said something intelligible. The computer program we used to analyze our data will exclude *xxx* strings when calculating MLU.

- Exclude fillers such as *eh*, *hom*, *uhuh*, *oh*, *mmm*, *yi2*, *ha2*, *a*, *ye*, *ya*, *hey*, *gosh*. These fillers were transcribed with a '&' sign and the program of MLU count will exclude them.

- Songs and poems are transcribed as notes and are excluded from MLU. Numbers, such as *one-hundred-eighty-four*, are counted as one morpheme.

  (In these cases, consequently, the length of utterance will be shorter than in reality.)

Lexical aspect is compositional, as exemplified in section 1.1. The aspectual interpretation of a predicate depends on both the verb and its object arguments. Given the short MLU (mean: 2.75) of our children and the PRO-DROP parameter of Mandarin, it is not uncommon that the arguments are missing. This makes it difficult to define whether a predicate is of the situation type of activity (e.g. *run*) or accomplishment (e.g. *run a mile*). However, the Resultative Verb Compounds are not problematic to identify because they usually possess two parts, a verb and a result state, such as *fang-hao* (put-good) 'put in

good order.' Therefore, we separated the verbs produced by our children into two big categories: statives and eventives. Then we further divided the eventive verbs into [+ resultative] and [- resultative]. The progressive marker *zai* serves as a test to help us differentiate [-resultative] and [+resultative] verbs. For instance, *zhao* 'look for' can occur with *zai* in a sentence, as in (42a); thus, it is a [-resultative] verb. The Resultative Verb Compound, *zhao-dao* (look for-reach) 'find' cannot appear with *zai* as in (42b) and it also expresses a natural result state; hence, it is a [+resultative] verb. And a [+resultative] verb can co-occur with the perfective *–le* without question, as shown in (42c).

(42) a. wo zai *zhao* wo-de qianbao
I ZAI look:for I-GEN wallet
'I am looking for my wallet.'

b. *wo zai zhao-dao wo-de qianbao
I ZAI look:for-reach wo-GEN qianbao
'*I am finding my wallet.'

c. wo zhao-dao-le wo-de qianbao
I look:for-reach-LE wo-GEN qianbao
'I found my wallet.'

Adjectives function as verbs in Mandarin and are termed 'adjectival verb' in this thesis, as discussed in a previous session. Recall that an adjectival verb can take a non-ambiguous perfective *–le* as in example (43).

(43) *ta shou-le san-bang*
he thin-LE three-pound
'He lost three pounds.'

In addition, due to the lack of tense morphology in Mandarin, events of verb-*le* in our study are divided into 'completed' and 'not-completed' actions according to the

context; thus, we may better compare the English data with the Mandarin data in examining the Prototype account.

Finally, in the previous studies regarding Mandarin *-le*, researchers failed to separate the two *le*s. Although Erbaugh (1985, 1992) notices the existence of two *le*s but because most *-le*s produced in her data are sentence final (as are ours), she takes them to be ambiguous and counts them as verb-*le*. And Li (1990) simply treats verb-*le* and sentence final *le* as one morpheme with the same meaning. In our study, verb-*le* and sentence *le* are separated to the extent that this is possible. We will show below that excluding non-ambiguous sentence *le* cases is important to guarantee the distributional bias to be found.

3.3 Results

Table 5 and 6 present the MLU in each month of NaNa and DiDi, respectively. As is illustrated in Figure 1, their MLU keeps progressing as they grow older, as expected.

Table 5. MLU-NaNa

	1*	2	3	4	5	6	7
Age	2;0.8	2;0.22	2;1.24	2;2.21	2;3.17	2;4.22	2;6.7
Age (months)	24	25	26	27	28	29	30

Figure 1. MLU and age

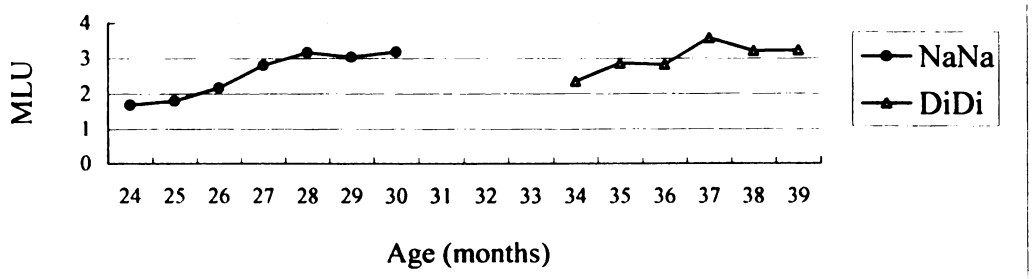

Table 7. Co-occurrence of grammatical and lexical aspect -- NaNa and DiDi combined[i]

VERB TYPES		Stative	Eventive (Activity, Accomplishment, Achievement)		Adjective	Total
			[-Resultative]	[+Resultative]		
Basic form		299	1746	753	>450[v]	2798
-LE	Action Completed		8	184		192
	Action Not-Completed	1	1	17	45	64
ZAI-		1	83	4		88
-ZHE		12	9			21
-GUO			4			4
Reduplicated[ii]			51	3	[v']	54
YOU-[iii]		7	13	11		31
MEIYOU-[iv]		11	8	13	5	37
YOUMEIYOU?				1	1	2
Total		331	1923	986	51	3291

i. See Table 8 and 9 below, which have the same format as Table 7, for the 'co-occurrence of grammatical and lexical aspect' in each child. Also see Table 10-22 for the list of verbs with different grammatical aspect and the type/token count in each recording.

ii. The reduplicated form of a verb expresses the delimitative aspect (Li & Thompson 1981), which means doing an action a little bit, e.g. *kankan* 'look look' means 'take a look'.

iii. Wang (1965) and Li and Thompson (1981) noticed that *you-* 'have' is a variant of the perfective *–le*, especially in Southern Mandarin, as exemplified in (1a-b).

iv. *Meiyou* 'not-have' in the negative sentence (2) is the counterpart for both *–le* and *you* in affirmative sentences (1a-b). *You-mei-you* 'have-not-have' forms the A-not-A question in (3) for the perfective *–le*.

(1) a. wo he-le na-bei cha
I drink-LE that-CL tea
'I drank/have drunk that cup of tea.'

b. wo you he na-bei cha
I have drink that–CL tea
'I have drunk that cup of tea.'

(2) wo mei-you he na-bei cha
I not-have drink that-CL tea
'I did not drink that cup of tea.'

(3) ni you-mei-you he na-bei cha?
you have-not-have drink that-CL tea
'Have you drunk that cup of tea or not?'

v. Adjectives in their basic form are not counted in this research because many of them are not clearly to be a free and meaningful morpheme. For instance, in early ages, *xiaozhu* 'small big' always appears as a fixed item.

v'. The reduplicated adjectives are excluded because they do not provide aspectual reading as other verbs do as explained in note ii.

3.4 The Distributional Bias

Our data support the distributional bias found in the English and the previous studies as presented in Table 7. The children initially use the perfective *–le* (n = 256) with resultative verbs (79%) and use the imperfective *zai* (n = 88) with non-resultative verbs (94%). If there were no distributional bias, we would expect *–le* and *zai* to show up with all verb types. Among the total 986 resultative verbs, only 20% of them appeared with *–le,* which suggests that children are not treating resultatives plus *-le* as an idiom or compound.

Focusing on the distribution of the marker *–le*, Figure 2 gives the use of *–le* treated as a group of verb-*le* and sentence *le*. Figure 3 excludes the non-ambiguous sentence *le* cases — cases where *le* is sentence final and is not a verbal suffix, and cases which can be negated by *bu* 'not' as discussed in section 1.2.2. (The list of all cases of sentence final *le* and verb-*le* produced by our subjects can be found in Appendix II.) These two figures argue for a separation between verb-*le* and sentence *le* because if verb-*le* and sentence *le* are counted as one morpheme as in previous studies, the distribution of the Mandarin 'perfective marker' will differ more dramatically from other languages. First, recall that Shirai and Andersen's (1995) subjects produced 94-100 % of their past *–ed* with achievement verbs. Our subjects, however, used 72% of the verb-*le* with resultative verbs in completed events (Figure 3) and only 46 % of *–le* (verb-*le* and sentence *le* combined) with resultative verbs in completed events (Figure 2). Therefore, if verb-*le* and sentence *le* are counted as a group, the percentage of the cases where *le* and a resultative verb occurring together in completed events will decreases from 72% to 46%, which differs greatly from the English finding.

Second, 28% verb-*le* and sentence *le* combined (Figure 2) appear with stative verbs, including adjectival verbs. This percentage is very different from the result found in the English data, in which nearly zero percent of the past *–ed* appears with verbs other than achievement verbs. In order to more accurately compare the perfective marker in Mandarin with its counterpart in other languages, it is necessary to separate the two *le*s. Accordingly, the distribution of verb-*le* only is given in Figure 3. Considering verb-*le* alone, 18% of them appear with stative or adjectival verbs. This percentage is smaller than what we found when mixing verb-*le* and sentence *le* together and is more consistent with the English data.

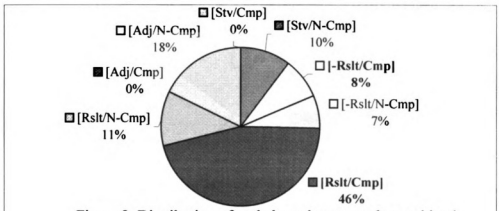

Figure 2. Distribution of verb-*le* and sentence *le* combined

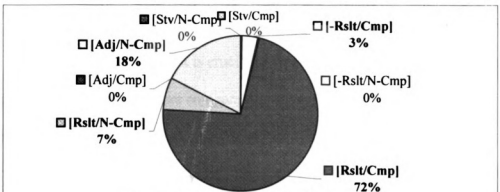

Figure 3. Distribution of verb-*le*

Another point we would like to make is that former studies focus only on the distributional bias between the perfective or past marker and achievement verbs so they began their analysis from analyzing the cases with perfective or past marker. But if we look at our data going from achievement verbs (or resultative verbs in our study) and associate them with perfective or past markers, we may discover a very different and interesting result, as shown in Figure 4. Here we find that nearly 80% of the resultative verbs associate themselves with various forms other than with the perfective-*le*.

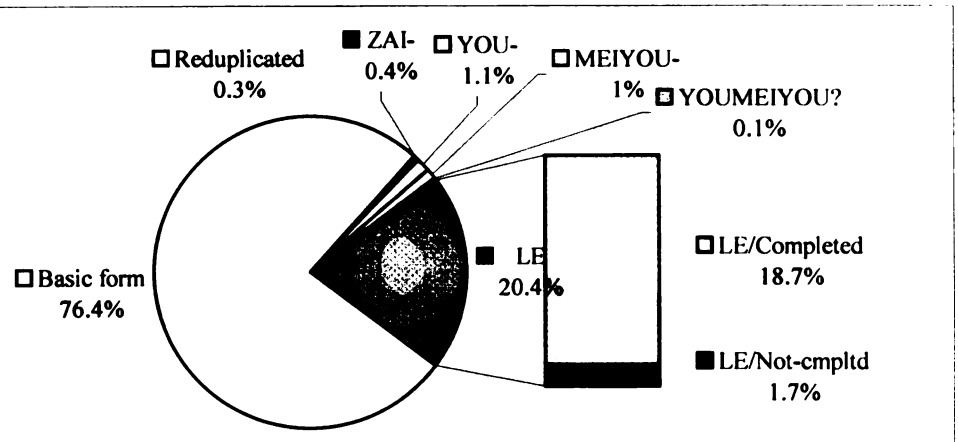

Figure 4. Distribution of [+Resultative] verbs in various forms

To sum up, our data are consistent with the distributional bias found in other languages: about 79% perfective *-le* appears with resultative verbs and 94% imperfective *zai* appear with non-resultative verbs. It is crucial to separate perfective-*le* from sentence final *le* in order to have evidence more comparable with data from other languages. Besides, previous studies discuss the distributional bias starting from associating the aspect markers with verbs, while the majority of verbs which appear in their basic forms without aspectual marking should also be taken into consideration.

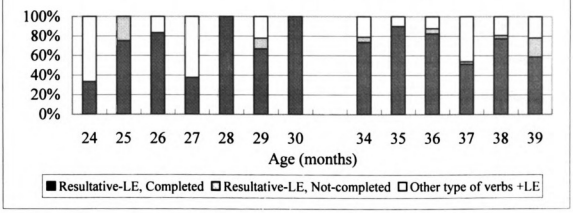
3.5 Evidence Against the Prototype Account

In this section we will argue that our children do not have a macro-category that includes past/perfective/telic as argued for the English-speaking children in Shirai and Andersen's study (1995).

3.5.1 Separation between Telic/*-le* and Past

When we examine the sentences with *–le*, we find evidence that our children show a separation between telic/*-le* and past because the resultative-*le* sequence is found also in not-completed/non-past events. Recall in Figure 3, in total 79% *-le* appear with resultative verbs, which is the combination of 72% completed events and 7 % not-completed events. In Figure 5, the sequence of a resultative verb plus *-le* is produced in completed events (33-100%), and in not-completed events (0-25%) in different age. Even in the very early stages, *-le* is never exclusively used with resultative verbs in completed events as it is by English children.

Figure 5. Interaction between perfective-*le*, verb types and completedness



In examples (44) and (45), we found that children use the resultative + *-le* sequence in not-completed events.

(44) baba zou-le de-shihou, mama jiu ... (age 3;3.8)
Dad leave-LE when, Mom then (DiDi, file 6, line 165)
'When Dad leaves, then Mom (will)...'

(45) a. kuaiyao diao-xialai-le. (age 2;11.21)
soon fall-down toward the speaker -LE (DiDi, file 3, line 1824)
'...is going to fall down soon.'(refers to a toy lion)

b. shizi meiyou kuaiyao diao-xialai
lion not-have soon fall-down toward the speaker
'The lion is not going to fall down soon.'

c. *shizi bu kuaiyao diao-xialai le
lion not soon fall-down toward the speaker SFP
'The lion is not going to fall down soon.'

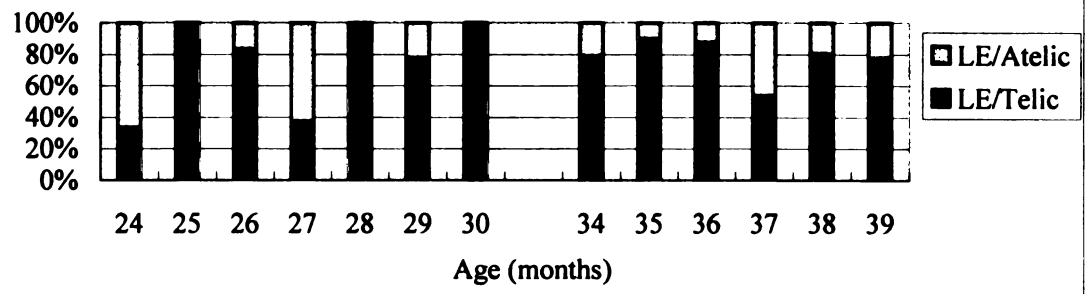
Le in sentence (44) is not a sentence final particle because it is not in the sentence final position and it is evidently a verb-*le*. However, as discussed in the section about perfective markers (section 1.2.2), when *–le* follows a verb and locates in the sentence final position as in (45), it becomes necessary to identify whether it is purely a verb-*le*, a sentence final particle, or a combination of the two. One way to differentiate between the two *le*s is that *bu* 'not' is the morpheme used to negate sentence *le*, while to negate verb-*le*, *mei(you)* 'not(-have)' should be used instead. Sentence (45a) is a sentence without subject. According to the context, we restore the subject, a toy lion, and use *meiyou* and *bu* in sentences (45b) and (45c) respectively to test whether *-le* in (45a) is a verb-*le* or a sentence final particle. The grammaticality of (45b) and the unacceptability of (45c) make it clear that *-le* in (45a) is a case of verb-*le*, not a sentence *le*. Otherwise, sentence (45c) would be grammatical because *bu* should be able to co-occur with the sentence final *le*.

In short, telic/*-le* can be used in not-completed events and thus telic/*-le* should be separated from past.

3.5.2 Separation between Telicity and *–le*

It is not just a matter of saying that children first associate particular types of verbs predominantly with the perfective *–le*, just like past *–ed* always appears with telic verbs in early English. Recall in Figure 3, in total 21% verb-*le* appears with atelic verb, i.e. non-resultative verbs (activity verbs), and adjectival verbs. In Figure 6, we can see that *–le* is used with atelic verbs in the early stages — Mandarin-speaking children do not always associate *–le* with telicity. (See Appendix I for the list of verbs appearing with various aspect markers in each recording.)

Figure 6. Interaction between perfective-*le* and telicity



Specific examples to support the separation between telicity and *–le* can be found in (46) and (47). Children as young as two year-olds have already used *–le* with atelic verbs, such as the adjectival verb *hao* 'good' in (46) and the activity verb *ku* 'cry' in (47). One may suggest that the predicate type of (46) is a resultative because its translation indicated the emergence of a result. However, sentence (46) is undoubtedly a case of an adjectival verb. It is not surprising that one can interpret (46) as the emergence

of a state because we have discussed earlier that the perfective marker can work with stative or adjectival verbs to indicate ingressive aspect.

(46) hao3-le (age:2;0.8)
good-LE (NaNa, file 1, line 1970)
'(the chicken) is finished.'
The child responds to the adult's question:
kao-hao-le ma? (line 1969)
bake-good-LE QM
'Is (the chicken) done?'

(47) wo cha biti ku-le (age: 2;9.21)
I wipe snivel cry-LE (DiDi, file 1, line 1227)
'I cried (when) I have my nose wiped.'

In short, children seem to possess the competence to recognize perfectivity and telicity as two distinct categories because they do not always combine perfective *–le* with telic verbs.

3.5.3 Evidence for Two *les*

In the previous sections, we learned that Mandarin-speaking children do not put past/perfective/telic as a macro-category. They can separate them and use them in an adult-like way. Then, a further question arises: do children understand that there are two *le*s in Mandarin and that the two *le*s should be used differently? Evidence has shown that syntactically, children use the two *les* in different positions. We have discussed various examples where *–le* is used right after a verb. Sentences (48) and (49) indicate that *le* does not have to always follow a verb. It can be preceded by a pronoun *wo* 'I; me' in (48) or a common noun *gushi* 'story' in (49).

(48) jiejie, huan wo le (age: 2;1.24)
old-sister, change me SFP (NaNa, file 3, line 1570)
'Old-sister, it's my turn (now).'

(49) wo yao jiang gushi le (age: 2;3.17)
I want tell story SFP (NaNa, file 5, line 430)
'I want to tell (a) story (now).'

Notice that these two examples were chosen from the data recorded at age 2;1 and 2;3. If we compare Erbaugh's finding (1992) that children acquire *–le* before 2;4, then these data suggest that as soon as children produce *–le*, they use it in different positions, namely, in verbal suffix position and in sentence final position following words other than verbs.

More evidence arguing for children's knowledge of the two *le*s is that to make negation or A-not-A type interrogation[10] for verb–*le* (but not the sentence final *le*), *you* 'have' or *meiyou* 'not-have' has to be used. As we have discussed before, the rule is that in order to make a negation or an A-not-A question for *–le*, one needs to omit *–le* in the affirmative sentences and mark the sentences with *meiyou* or *you-mei-you*. In the example below, *-le* is used in the affirmative in (50a), while *mei-you* is used in the negation in (50b). It appears as *you* 'have' substitutes *–le* of the affirmative (50a) and forms an A-not-A question (50c) by using *you-mei-you*.

(50) a. ta chi-le niurou.
he eat-LE beef.
'He ate/has eaten beef.'

b. ta meiyou chi niurou
he have-not eat beef
'He has not eaten/did not eat beef.'

c. ta you-mei-you chi niurou?
he have-not-have eat beef
'Has he eaten/Did he eat beef or not?'

10. The A-not-A question is a type of question that is similar to verb-or-not in English. For instance, *ni chi-bu-chi niurou* (you eat-not-eat beef) means 'do you eat beef or not'. The negation marker *bu* is used with all verbs while *meiyou* is used only to negate sentences of verb–*le*.

Evidence also indicates that children know the unacceptability of *–le* co-occurring with *meiyou*. In (51), if the child had not acquired the rule that *–le* and *meiyou* are incompatible within a sentence, we would expect that an error like *mei nong-hao-le* 'not make-good-LE' would occur, which mistakenly put *mei* and *–le* together. Similarly, in (52), children do not make the mistake of putting *meiyou* and *-le* in the same sentence.

(51) Adult: wo nong-hao-le (line 2943)
I make-good-LE
'I have made it done.'

Child: ni hai mei nong-hao (age:2;1.24)
you still not make-good (NaNa, file 3, line 2944)
' You've not finished it yet.'

Possible error: *ni hai mei nong-hao-le
you still not make-good-LE

(52) Child: wo meiyou kan-dao yi-ge (age:2;4.22)
I not:have see-reach one-CL (NaNa, file 6, line 542)
'I haven't seen any.'

Possible error: *wo meiyou kan-dao-le yi-ge
I not:have see-reach-LE one-CL

Adult: wo kan-dao-le yi-ge
I see-reach-LE one-CL
'I've seen one'.

An example like (53), in which an adult and a child talk about a toy thrown up to the ceiling, makes it even more apparent that the child as young as two and half has acquired the rather complicated rule that *you* serves as the counterpart of verb-*le* in negation and interrogatives (Wang 1965).

(53) Adult: you-mei-you peng-dao? (line 2346)
have-not-have bump-reach
'Has it bumped-up?'

Child: meiyou (age: 2;6.7)
not-have (NaNa, file 7, line 2347)
'No.'

Adult: (throw the toy up to the ceiling again) (line 2348)

Child: you, peng-dao-le (line 2349)
have, bump-reach-LE
'Yes, (it) has bumped up (to the ceiling).'

Furthermore, to negate sentence *le*, children present their adult-like language competence that the negation marker *bu* 'not' can be directly added to the sentence without dropping *le*. Again, from these two examples (54) and (55), which were produced at a very young age, we can see that as soon as children start to use *le*, they apply *bu* 'not' to negate sentence *le*, but use *meiyou* 'not-have' and verb-*le* in negation and affirmative sentences, respectively. In addition, these examples with verb-*le*, sentence *le*, *meiyou* and *bu* substantiate our view that it is not impossible to differentiate verb-*le* from sentence *le* in child Mandarin.

(54) bu jian le (age: 2;0.22)
not see SFP (NaNa, file 2, line 1751)
'(It) disappeared.'

(55) xianzai bu shi le (age: 2;6.7)
now not be SFP (NaNa, file 7, line 3057)
' now (I'm) not.'

CHAPTER 4

CONCLUSION

The Prototype account gives reasons for the distributional bias of aspect in English by arguing that children first use past morphology to mark prototypical past, i.e. verbs that are [+telic], [+punctual], [+result]. Because prototypical perfective looks almost identical to prototypical past, it seems that past tense encodes perfectivity. Also, because the verbs presenting prototypical past happen to be a specific situation type of verbs, i.e. the achievements, it looks like children are marking the inherent aspectual values of the verbs. In other words, it seems that English-speaking children use past *–ed* to mark a macro-category of past/perfective/telic.

The child Mandarin data, both in Li and Bowerman's experiments (1998) and our study, support the distributional bias found cross-linguistically — past/perfective morphology appearing with telic verbs and present/progressive with atelic ones. It appears that *–le* functions as the perfective marker in other child languages.

However, based on the evidence from the previous chapter, we find that Mandarin-speaking children use the sequence of resultative + *-le* both in completed (72%) and not completed events (7%), which means children can distinguish telicity/*-le* from past (this supports Wagner's study (1997) that tense is well understood by children as young as age 2;7). Thus, Mandarin-speaking children do not mix telic/perfective and past as a macro-category.

Next, if children are not using *–le* as a grammatical aspect marker, but as a lexical aspect marker to mark the telicity of the verbs, then every time *-le* appears, a telic verb should also appear. Evidence has indicated that there is also a distinction between

telicity and *–le* in child Mandarin as they use *–le* with atelic verbs starting from the early stages (total 21%). Hence, a category presenting the combination of perfective/telic marked by *–le* does not exist in child Mandarin either.

In sum, our data do not support the Prototype account. Mandarin-speaking children are not using the perfective *–le* to mark a macro-category of past/perfective/telic. In fact, the two year-olds seem to know the differences between verb-*le* (grammatical aspect), sentence *le*, tense, and verb types (lexical aspect). They already use *–le* in a very complicated adult-like way.

The distributional bias of aspect markers in child Mandarin not only desires alternative explanation other than the Prototype account, but also casts some doubt on the Prototype explanation for the English facts and suggests that the English facts must be explained in some other way. Furthermore, before adult frequency data is examined, it is impossible to argue for purely statistical learning in children's acquisition of aspect or tense markers.

	Action Not-Completed									1 / 2		1/2
										hao	Good 2	
Reduplicated form				1[iv] / 3								1/3
				(C'hi)chi	Eat 1	*xixi*	Wash 1					
				(hua)huakan	Draw 1							
MEIYOU-				1 / 1								1/1
						shou	collect 1					
Total	Type	3		12[v]				10		1		26[vii]
	Token	5		25				21		2		53
Total verbs	Type	25[vi]										
	Token	51										

i. Adjectives are treated as stative verbs in this thesis; however, in order to exclude the basic form and reduplicated form of adjectives (gray areas in this table), which are irrelevant in this study, we count adjectives in an independent column and not mix them with stative verbs.

ii. The number 10 / 21 means there are 10 types and 21 tokens of [-Resultative] verbs appear in their basic form.

iii. The italic form *chi* represents a Chinese verb and it is accompanied by its English gloss 'eat'. The number 6 following the English gloss 'eat' means that '*chi*' is produced six times in its basic form.

iv. *Chi* 'eat' and *hua* 'draw' are put in parentheses in this column because both of them also appear in their basic form, these two 'types' have already been counted. Thus, there is only one new type of [-Resultative] verb in this column.

v. 12 is the result of 10 plus 1 and 1. This means there are total 12 types of [-Resultative] verbs in this file.

vi. 25 is the result of 3 plus 12 and 10. There are total 25 types of verbs used in this file, excluding adjectives.

vii. The total type of verbs including adjectives is 26.

CHILD ACQUISITION OF THE ASPECT MARKER *-LE* IN MANDARIN

VOLUME II

By

Hsiang-Hua Chang

A THESIS

Submitted to
Michigan State University
in partial fulfillment of the requirements
for the degree of

MASTER OF ARTS

Department of Linguistics and Germanic, Slavic, Asian and African Languages

2002

@Begin
@Participants: IN Investigator, NAN NaNa child, YU YuYu old sister, MO Mother, FA Father.
@Date: 10-Mar-2000
@Time Duration: 10:30-12:00
@Age of NAN: 2;0.8
@Birth of NAN: 2-Mar-1998
@Sex of NAN: Female
@Age of YU: 4;5.2
@Birth of YU: 8-Oct-1995
@Coder: Hsiang-Hua Chang
@Filename: NaNa1
@Language: Taiwan Mandarin
@Location: NaNa's home, East Lansing, Michigan, USA
@Situations: Investigator, NaNa and YuYu played a set of puzzles with alphabets and representative animals for each alphabet, chatted about YuYu's friend, Amber, drew pictures, played magnets, played the toy cooking set, and wrote with Chinese brush pens.
@Warning: The tanscription has not yet been double-checked.

@End

@Begin
@Participants: IN Investigator , DID DiDi Child , MO Mother
@Date: 7-MAR-2000
@Time Duration: 19:00-21:00
@Tape location: tape 25
@Age of DID: 2;9.21
@Birth of JIA: 16-MAY-1997
@Sex of DID: Male
@Coder: Hsiang-Hua Chang
@Filename: DIDI1
@Language: Mandarin
@Location: DiDi's homex, East Lansing, Michigan, USA
@Situation: Investigator and DiDi are playing in the living room or DiDi'd room. Mom joins us sometimes. IN and DiDi are playing a puzzle about chickens in a barn. DiDi is very good at that and corrects IN's or mom's mistakes sometimes. We also play some palm-sized puzzles, a battery-powered fishing game, some small stuffed animals and read a few storybooks. We eat pizza together for dinner.
@Warning: The tanscription has not yet been double-checked.

@End

@Begin
@Participants: IN Investigator , DID DiDi Child , MO Mother , JJ JJ A girl , KE Kent A Boy, UN Uncle Alex .
@Date: 9-APR-2000
@Time Duration: 15:00-17:00
@Tape location: tape 25
@Age of DI: 2;10.23
@Birth of DI: 16-MAY-1997
@Sex of DI: Male
@Coder: Hsiang-Hua Chang
@Filename: DIDI3
@Language: Taiwan Mandarin
@Location: DiDi's home, East Lansing, Michigan, USA
@Situation: Investigator and DiDi are playing in the living room or DiDi'd room. Mom joins us sometimes. A girl, JJ and another boy, Kent, join us today. JJ and Kent play with uncle Alex most of the time. DiDi calls JJ "mei3mei2" (little sister).
@Warning: The tanscription has not yet been double-checked.

@End

@Begin
@Participants: MO Mother , DID DiDi Child , FA Father.
@Date: 18-JUN-2000
@Time Duration: two hours
@Tape location: tape 31
@Age of DID: 3;1.2
@Birth of DID: 16-MAY-1997
@Sex of DID: Male
@Coder: Hsiang-Hua Chang
@Filename: DIDI7
@Language: Taiwan Mandarin
@Location: DiDi's home, Kaohsiung, TAIWAN
@Situation: Mother read story books to DiDi. DiDi played toycars. Father came back home from outside and played with DiDi.
@Warning: The tanscription has not yet been double-checked.

@End

@Begin
@Participants: IN Investigator, DID DiDi Child, FA Father.
@Date: 11-JUL-2000
@Time Duration: 13:00-15:00
@Tape location: tape 33
@Age of DI: 3;1.25
@Birth of DI: 16-MAY-1997
@Sex of DI: Male
@Coder: Hsiang-Hua Chang
@Filename: DIDI9
@Language: Taiwan Mandarin
@Location: DiDi's home, East Lansing, Michigan, USA
@Situation: Investigator and DiDi were playing in the living room.
Father joined in sometimes. IN and DiDi played
toy trains, cooking games and read stoy books.
@Warning: The tanscription has not yet been double-checked.

@End

@Begin
@Participants: IN Investigator, DID DiDi Child, FA Father, MO Mother.
@Date: 24-AUG-2000
@Time Duration: 15:00-17:00
@Tape location: tape 36
@Age of DI: 3;3.8
@Birth of DI: 16-MAY-1997
@Sex of DI: Male
@Coder: Hsiang-Hua Chang
@Filename: DIDI12
@Language: Taiwan Mandarin
@Location: DiDi's home, East Lansing, Michigan, USA
@Situation: Investigator and DiDi are playing in the living room or DiDi'd room. IN and DiDi used plastic pearls to make necklaces. They talked about a picture which DiDi took with his neighbor, JJ, a one year-old girl. They also assembled toy tracks for small toy cars to run. Mother came back home toward the end of the recording.
@Warning: The tanscription has not yet been doubled-checked.
