

Prepare Strings Concert

By SUSAN JACOBY
Of The State News Staff

A musical blend of string instruments brews steadily in Williams Hall as the Congress of Strings rehearses for its second concert in Fairchild Theatre 8 p.m. Thursday.

John Barnett, director of the National Orchestral Association, New York City, is conducting the group of 100 young musicians. Barnett has conducted symphonic orchestras in New York, Brooklyn, Phoenix, San Diego, San Francisco and University of Stanford. He has also headed the Los Angeles and Japanese-American philharmonic orchestras.

The noted conductor said that the Congress of Strings is a concentrated effort by the American Federation of Musicians to develop string players for symphony orchestras.

"Very few young people have studied string instruments since World War II," he said.

Barnett rated 80 per cent of the Congress musicians as "very proficient" in their instruments. He noted that 60 per cent are approaching professionalism.

"Congress of Strings concerts," he said, "offer area music lovers an unparalleled opportunity to hear some of the finest non-professional musicians in the country."

4 Colleges Hike Tuition

While Michigan State students and their parents sit waiting for the inevitable tuition hike, tuition increases were announced for four other Michigan schools last week.

MSU Trustees are expected to announce the hikes at their meeting next Monday.

The most recent increases were for Central Michigan, Eastern Michigan and Western Michigan universities and Northern Michigan College. The state board of education said the four schools were given a \$35 hike in resident tuition to \$250 and \$55 increase for out-of-state residents to \$500.

Previous hikes approved were for the University of Michigan, Wayne State and Michigan College of Mining and Technology by their governing boards.

Gov. John Swainson and Lynn M. Bartlett, superintendent of public instruction, blamed inadequate, appropriations for the fee jumps.

"By failing to make adequate, appropriations, the legislature is pricing many competent, fully capable and well qualified Michigan youth out of the college market," Bartlett said.

Swainson called the hikes "regrettable."

ON THE WAY UP--Francis Quilian, graduate of the Michigan School for the Blind, right, plans to become a radio salesman. Taking part in the current Communications Art Institute, Quilian is studying advanced work in radio-television.

Canoeing Couple Meet Big Obstacles

A venturesome MSU couple hope to enter the Manistee River today in their canoe on their 600-mile canoe trip to the Great Lakes Forestry Exposition in Mio. They expect to reach their destination within three days.

Bob and Carol Manthy left Lansing Tuesday and reached Grand Rapids Saturday.

A three-horse power motor will be attached to the canoe to aid the couple in paddling against the tough Manistee current. Upon reaching Grayling, they will journey down the Au Sable river to Mio.

Manthy, a 6-2, 170 pound graduate in forest economics, and his 5-2, 100 pound wife have found large dams a troublesome problem during their trip.

The two have been paddling from "8 to 10 hours a day."

The couple faced another problem in the form of helpful boaters. "We had to dodge giant boat waves along most of the way. And most of these were caused by boaters who saw us -- and tried to help by slowing down. This caused even bigger

4-H Club Week Held at Shaw

Michigan 4-H club week began here Monday at Shaw Hall.

A four point program is being followed by the 1,000 top members from throughout the lower peninsula. Volunteer adult directors accompanied the group.

International affairs, Americanism, career opportunities and dating will be the programs of study. The 4-H groups will meet twice daily in the auditorium.

Lure of Money Calls Graduates

Teacher Supply Shorter In Science Fields

Just how bad is the teacher shortage at Michigan State?

Are huge classes, instructional TV, and impersonal education the fates awaiting the present and next generation of college students in Michigan?

Allan Tucker, assistant dean of the Graduate School, has an interesting booklet that sheds light on these questions.

Called "The System of Administration of Graduate Studies at MSU," the booklet shows that more doctorates were granted throughout the U.S. during the past decade than in all of the years up to that time.

Now - where do these Ph.D.'s go? How do they make their living?

Miss Michigan To Study Here

Michigan State's roster of beauty queens will be lengthened next year when Carole Jean Van Valin, Miss Michigan 1962, enters the University.

Representing Roscommon, the 18 year old blonde topped a field of 34 contestants. She was crowned at Muskegon Friday night by Karen Jean Southway, last year's Miss Michigan.

Miss Van Valin plans to major in elementary education.

Jean Ann Heyer, 22-year-old MSU senior representing Montcalm County, was selected first runnerup.

Miss Heyer, whose campus residence is West Yakely hall, is a soloist with the MSU symphony orchestra. She earned first place in the talent division Thursday night.

MSU senior Susan Jean Scott, Miss Lansing, placed 9th among the finalists.

Around 1900, 70 to 80 per cent went into college and universities. But by 1930 this figure had shrunk to 65 per cent and 1958 to 60 per cent.

These figures become more impressive when the doctoral recipients are broken down into their respective fields.

It is perhaps unfortunate, but nevertheless true, that physicists are more in demand than philosophers; biologists than artists.

Of all the men and women who receive the Ph. D. in the physical sciences during 1958, 47 per cent went into industry. Reason?

Just plain ole money, and lots of it.

Forty-one per cent remained to teach and do research in the schools and the remaining 12 per cent departed to government jobs and other activities.

Now take a look at the humanities. The picture changes.

Eighty-two per cent of all people
(Continued on page 12)

Commuters To Pay Fare Hike

Bus riders from the campus to Lansing and downtown points must pay 25 cent fares, a five cent increase which took effect Monday, said Suburban Lines manager John A. Cole.

Fares for on-campus runs between Spartan Village and University Village will remain at 10 cents, Cole said.

Spartan Village busses to downtown Lansing started running through campus Monday and will do so every half hour beginning at 6:30 a.m., he said. The Spartan Village run goes to Kalamazoo street and University Village on both the downtown and return trip.

SUNBAKED, BUT EAGER--Robert Manthy, MSU student, and his blue-eyed school teacher wife, Carol, arrived in Grand Rapids Saturday, completing the first leg of their 600-mile trip from Lansing through Western Mich-

igan. Portaging around the rapids in the Grand River, the hardy couple continued down river to Lake Michigan.

--Photo by Grand Rapids Press.

Student Fines Should Rise

Students are violating campus parking regulations more and more. In May of this year 1,131 tickets were issued to students -- 224 more than in May, 1961.

Most of the citations are for illegal parking in faculty lots or on north campus at hours when student vehicles are not allowed.

For these offenses students are fined \$2. The same amount is charged if a person repeats a second, third or even fourth time.

Apparently the \$2 fine has not been expensive enough to deter most students from violating the rules. Larger fines might be an answer to the problem of keeping the parking spaces reserved for faculty and staff clear. A larger fine might cause a person to think twice before he attempts to park in an illegal area in hopes of not getting a ticket.

Michigan State parking problems have been increasing proportionately with the growth of the school. That is why something must be done. And that is why we have decided to support the proposal to increase the amount of the fines with each parking offense.

The faculty-student committee on motor vehicle regulations has sent to Pres. Hannah a proposal requesting that second time offenders be fined \$4, third offenders \$6 and all the way up to \$25 for the sixth parking offense and thereafter.

Most intelligent students would be willing to pay 10 cents in student reserved lots on south campus or 25 cents in East Lansing parking lots rather than risk picking up a \$6, \$8, \$10 or even \$25 fine, which would be a big dent in any one's pocket or budget.

Dick Bermitt, director of campus police, has pleaded for stiffer fines.

"We need some deterrent to prevent the high number of violations," he said.

The committee has come up with a strong deterrent. We hope the university finds a method to use it. Indications are that machinery is not set up for the plan. Even if it takes a year to establish proper machinery, we urge the university to take time to set it up.

And if it does take a year to institute the plan, we also recommend that the alternative proposal of \$4 fines for each violation be put in operation in the meantime. Perhaps \$4 might prove to be the deterrent police are looking for. We don't think so. The threat of a \$25 fine appears to be the only real deterrent.

This Man Faulkner

By BOB ROSS
 Of The State News Staff

On July 2, 1961 Ernest Hemingway died. On July 6, 1962 America was shocked to learn of the death of William Faulkner; a death within weeks of the publication of what may well be one of his best novels: *The Reivers*.

To say that this country is now lacking in masters of the art of fiction would be an understatement; we are famished.

That both of these men were winners of the Nobel prize for literature, Hemingway in 1954 and Faulkner in 1949, is indicative that what Americans have to say matters to the entire world.

They followed in, and overtook, the footsteps of Sinclair Lewis and Pearl Buck.

It is only the great writer, of whom William Shakespeare is the greatest, that can take a local situation and transform it into a matter of universal importance.

William Faulkner created Yoknapatawpha county. Into this 'Waste Land' of desolation he put some of the most memorable characters of literature.

To think that Quentin Compson, Temple Drake, Popeye, Joe Christmas, Bayard Sartoris and Flem Snopes are characters of the present and particular is like considering Hamlet an individual Danish prince. These people of Faulkner's are 'man' not 'men.'

One of the most renowned critics of the present day, J.E. Priestly, has said of Faulkner:

"He has genius because he is able, as few writers are, to force the barrier between consciousness and the unconscious and the unconscious, and so release into his narrated dream, the contents of the unconscious."

Faulkner's novels are primarily psychological. They probe the inner workings of the human mind, albeit many times, the sick mind.

If his characters seemed for-

WILLIAM FAULKNER
 . . . Noted Writer Dies . . .

eign and violent to the Northern and Western reader, it is because we are accustomed to the 'lonely crowd' where the caldron of human passion is kept under wraps.

Faulkner's novels are so powerful and confused because in them the outer and inner worlds are tightly mixed.

The sage of Yoknapatawpha county has been considered an agrarian naturalist in the manner of Erskine Caldwell but this is to limit a master to the company of sensationalists.

Faulkner is more profound, more meaningful, and more artistically competent than any of the American naturalists.

The problems encountered in his writing, especially in "The Bear" and "Absalom, Absalom!" are well-nigh metaphysical.

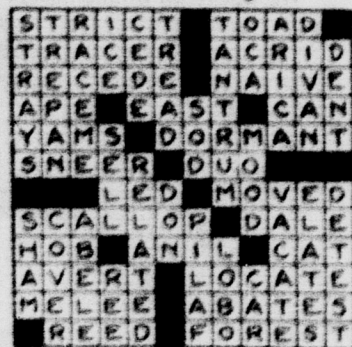

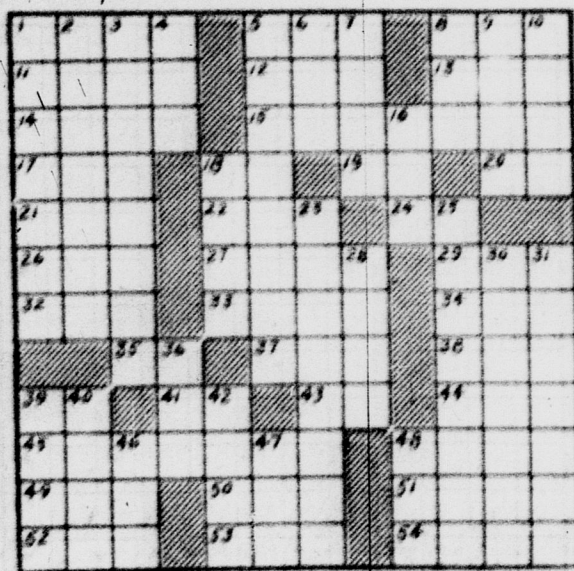

Yes, there is also violence in his work; Faulkner's violence is both twisted and melancholy; but his mood is reminiscent of Poe or Baudelaire. This is violence with meaning.

As for style, Faulkner has proved that Joyce is not the only master of the stream-of-

Focus On District Change

Editors note -- No part of Michigan's proposed new constitution attracted as much attention as that given the section on reapportionment of the State Legislature. In this, the third of a nine part series, two veteran AP newsmen -- Gene Schroeder and A.F. (Pete) Mahan -- discuss the reapportionment which they call the key issue.

LANSING (AP) -- If any one issue holds the key to whether the proposed new constitution will stand or fall before the voters it probably is legislative apportionment.

While the subject may not have been the most important one faced by the constitutional convention's 144 delegates, it certainly was -- and still is -- the most politically explosive.

Republicans are high in their praise of the provisions under which the State Senate and House will be appointed in the future if the Constitution is adopted. Democrats attack the plan bitterly, contending it merely perpetuates GOP control of the senate and fails to put even the House on a straight population basis.

Michigan State University president John A. Hannah, R-East Lansing, who served as chairman of the committee which tackled the problem, said he will give the new constitution his full-fledged support.

From the opening day of the convention, the apportionment issue was cited repeatedly as the one factor which affected decisions on other matters in the constitution, ranging from Senate confirmation of executive appointments to legislative powers over local government.

In the closing days of the convention's deliberations, a decision by the United States Supreme Court also affected delegate thinking.

The High Court vacated a State Supreme Court decision throwing out a suit by August Scholle, Michigan AFL-CIO president, seeking to force redistricting of the state senate.

The state tribunal was ordered to reconsider the case because it was wrong in saying Scholle's action dealt with a political question outside the court's jurisdiction.

Scholle announced weeks ago that he would campaign against the new constitution if the Republican majority pushed through its apportionment plan.

The U.S. Supreme Court action (Continued on page 4)

Last of the Big Milk Drinkers

Postwar incomes soar; the birth rate rises, but per-capita milk consumption declines and is expected to do so.

According to Robert O. Herrmann the proportion of the population under age 20, the big milk drinkers, has increased by little more than 6 per cent since 1946. He estimated that without this increase milk consumption would have been 8 gallons per person lower in 1959 than it actually was.

A recent study conducted by Michigan State University agricultural economists proved that the rising postwar incomes have had some favorable effect on milk drinking.

The all time high for milk consumption, 42.5 gallons per

person, was reached in 1945. In 1959 the average American was drinking only 38 gallons of milk per year -- a 15 per cent decrease since the war.

"The proportion of the population under 20 is expected to increase very little between now and 1970," says Herrmann. "Without the offsetting effects of this group, the U.S. may experience more serious drops in milk consumption per person during the next few years."

4 Students At Institute

MSU students Jane Ferber, Mrs. Estelle Walz, Mrs. Harriet Sherwood, and Frederick Okatcha are spending summer quarter at the Detroit Merrill-Palmer Institute.

The Merrill-Palmer Institute sponsors comprehensive studies of human growth and development, family life, and community organization.

Selected undergraduates in sociology and related fields spend a quarter or semester studying at the Institute and receive full credit at their own universities.

Lab Safety Seminar Slated for Wednesday

A Lab Safety Task Force seminar will be held Wednesday in the Education Building from 10 to 11:45 a.m.

Participants, particularly in chemistry, which we hope to prevent in the future."

Duane Ullery, head of the project, said that its purpose is "to acquaint deans, department heads and lab directors with the problems involved in lab safety measures."

Another seminar dealing with the same subject is planned for graduate students, faculty and staff members Sept. 21-22.

Doctors Look At Food Crop

"Doctors" who specialize in disease of man's food crops will check Michigan "patients" and examine current research at a conference of the American Phytopathological Society this week at Kellogg Center.

About 100 plant pathologists from schools and agricultural chemical industries in the 13 states of the north central division are expected to participate.

Axel L. Anderson of the sponsoring MSU Department of Botany and Plant Pathology, president of the north central division, points out that each year plant blights, viruses, fungus, rust and other plant afflictions cost farmers many millions of dollars.

As one example of the pathologists' work, he cites the development at MSU of disease-resistant bean, which is estimated to have saved Michigan bean farmers about \$5 million since its introduction in 1959.

Lloyd M. Turk, director of the MSU Agriculture Experiment Station, will speak on "A-Look Ahead in Agricultural Research" at a banquet in Kellogg Center.

Voice Recital

Mary Ruth Crown, soprano from McPherson, Kansas, will present a graduate voice recital tonight at 8:15 p.m. in the MSU Music Auditorium.

Another graduate recital will be given by pianist Marion Gordon of Potsdam, New York, Sunday at 4 p.m.

Placement Bureau

General Motors Corporation will be interviewing, July 11, all majors, from all colleges of engineering. Many openings exist in departments with Chevrolet Engineering - Automotive Testing; Frigidaire; Delco-Morraine; Delco-Products; Guide Lamp Division of GM, in Michigan, Ohio and Indiana.

Interviewing on July 13 - Lehigh Portland Cement Co. - Colleges of Business & Public Service, Science & Arts and Communication Arts.

Interviewing on July 17 - Lily-Tulip Cup Corporation - College of Business & Public Service, Science & Arts and Communication Arts.

Interviewing on July 18 - Detroit Public Schools - All candidates interested in teaching in the Detroit Public Schools.

Con-Con

(Continued from page 2)

brought about one quick change in the apportionment proposals of the new document.

Delegates adopted a provision under which redistricting of the Senate could be undertaken immediately if the state court upholds Scholle's contention that the present Senate's "frozen" districts are unconstitutional.

Under the original plan, an eight-member bi-partisan commission would not reapportion the Senate until the 1970 census figures became available and every 10 years thereafter.

If the commission cannot agree then proposed plans would be submitted to the State Supreme Court.

Democrats are vehement in their displeasure over the convention's system for establishing new Senate districts. It is based on a formula giving 80 per cent weight to population and 20 per cent weight to area.

Out numbered better than two-to-one in the Senate now, Democrats argue that the GOP-sponsored plan would merely perpetuate "legislation without fair representation" for some high population areas such as Detroit.

The major reason for the calling of the convention was general public dissatisfaction with the present method of legislative apportionment," the Democrats said.

"The proposed document perpetuates legislation without fair representation, because the apportionment problem has not been solved.

"Senate districts which would not be reapportioned until after 1970 could vary in population by more than four to one, the largest being approximately 365,860 and the smallest being 86,430, based on population projections for 1970."

To overcome some of the objections, the convention approved for immediate effect -- a plan whereby the Senate would be expanded from its present 34 to 38, with the four additional seats going to Wayne, Genesee, Macomb and Oakland Counties.

The 80-20 formula would give each county a factor computed by multiplying by four its percentage of the state's population. Added to this would be the county's percentage of the state's total area.

"The bias against the metropolitan voter is made the basis of a monstrous formula equating people with square miles . . . (it is) an expression of contempt for people to equate them with dirt."

But with one eye on the Supreme Court, GOP delegates defend the Senate plan as based on principle.

"The important consideration is that an impartial, unbiased, objective formula has been established for the determination of Senate seats - instead of an arbitrary judgment lacking in supporting principle."

For the House, the convention decided to continue the present 110 seats, with only a county or group of counties having .7 of one per cent of the state's pop-

ulation being entitled to one member. After the representative areas were allocated their seats, the remaining lawmakers would be elected on the basis of population - following the "equal proportions" formula used in the U.S. Congress.

Although the provision eliminates the present .5 per cent "moiety" figure, Democrats say nevertheless that the .7 per cent factor is a modified moiety favoring farm areas at the expense of the cities.

They said the result would merely cut from 10 to five seats a "bias favoring rural Republicans" whereas there should not be even one seat allocated in this matter.

GOP spokesmen counter that since both parties have indicated they favor sticking to county lines in drawing up districts, the proposed plan is about as close to population equality as possible.

Another major change in the legislative branch article would establish a legislative auditor general, to be appointed by the lawmakers for an eight-year term. This provision would eliminate the present elective auditor general.

Lt. Harcek Named Wyoming Chief

Donald S. Harcek resigned his post as lieutenant with Campus Police last week when the city of Wyoming announced his appointment as police chief of that Western Michigan city.

Harcek, 30, who was in charge of records and investigation with the university police force, will assume the \$8,000-a-year post Aug. 1, said Wyoming City Manager John H. Kennough.

After joining the MSU force in July of 1958, Harcek was appointed lieutenant in January of

this year. He received his bachelor degree here in 1954 in police administration.

Harcek lives in Williamston.

'You Never Can Tell,' Next Circle Play

One of George Bernard Shaw's rare light works, "You Never Can Tell," will be presented by the MSU Summer Circle Wednesday through Saturday in Demonstration Hall.

The comedy explores the inevitable confusion when a husband and father returns home after 18 years. The tumultuous situation is abetted by a scrambled romance within the Clandon family.

The cast of "You Never Can Tell" is headed by Helen Shaw of WMSB, who plays the female head of the Clandon family. The wayward husband and father is impersonated by Carroll Hawkins, MSU associate professor.

WMSB director Dick Reynolds and MSU coeds Mary Ellen Finck and Linda Herr complete

the family tree. Continuing Education artist Don Caillez fills the part of the erstwhile Casanova.

Completing the cast are Marcia Maters, Dick Murray, Charles Cloffi and Gordon Lawrence.

"'You Never Can Tell' is one of the funniest plays ever written by Shaw or anybody," says American satirist S. N. Behrman.

The impudent comedy will be presented each evening at 8:30 p.m. Tickets may be obtained at Demonstration Hall between 2 and 6 p.m., Monday through Saturday.

I sold it for only a few pennies a day through the Campus Want-A-Ads.

lar music, Barnett criticized the idea that one can only appreciate a single kind of music.

"It is certainly possible--and most desirable--to enjoy all types," he said.

"There is an increasing trend among college students to buy good records for their collections. This is partly due to fine modern equipment, which can nearly duplicate the sound of a concert hall."

Several Congress students expressed an interest in varied types of music. Bruce Allard, 16-year old Minneapolis violinist, also plays trumpet in a jazz band, the Dixieland Ramblers.

"I like both jazz and classics," he said. "Each has its own place."

Nancy Mussen, 20, of York, Pennsylvania, has played bass six years. She professed great interest in progressive jazz as well as classics.

One student even mentioned rock-and-roll as an enjoyable form of music.

Mantovani Starts '62-'63 L-C Season

Dates for the 1962-63 Michigan State University Lecture-Concert and World Travel series were announced by Dr. Wilson B. Paul, series director.

Mantovani and his orchestra open the season with a Series A concert on Oct. 15. Other Series A attractions are: "As We Like It," Shakespeare performed by Maurice Evans and Helen Hayes (Nov. 6); Leningrad Philharmonic orchestra (Nov. 11);

New York City Opera company in Verdi's "Rigoletto" (Nov. 19); Leontyne Price, soprano, (Feb. 7) and on Feb. 13 the Iglesias Spanish Ballet, an unusually varied program of Spanish dances.

"American Dances," starring Ruth St. Denis and Melissa Hayden (March 11), is a 50-year review of ballet, modern and ballroom dancing. This program, an outgrowth of the 1961 Boston Art Festival, is also the golden anniversary of Miss St. Denis's career.

Series A will be concluded on March 31 with a performance by the Detroit Symphony orchestra, Thomas Schippers conducting.

Series B opens Oct. 30 with "Sound of Music" followed by David Oistrakh, violinist (Nov. 5).

On Nov. 14, the "Foo Hsing Theatre," from Taiwan, will present the first example of Chinese

theater in this area. The company of over 50 children was specially trained, under the sponsorship of the Chinese government for the Seattle World's Fair.

This program is entirely different from anything previously presented by the Lecture-Concert Series, said Dr. Paul.

Other Series B presentations are: New York City Opera company in Mozart's "The Marriage of Figaro" (Nov. 20); Jerome Hines, bass (Jan. 13 or 20); Rudolf Serkin, pianist (Feb. 18) and Poznan Choir, from Poland (April 2).

Two lectures have been definitely scheduled. Pulitzer Prize winner Harrison Salisbury, of The New York Times, will speak Jan. 22 on "The Coming Conflict between Russia and China." Norman Cousins will speak April 29 on "Education and Our Foreign Policy."

Discount House Climb Assured

ZURICH, Switzerland—“Discount houses are as assured of growth today as the railroads were in the 1860s,” says Edward M. Barnet, MSU professor of marketing, who was one of the featured speakers Monday at the 11th International Conference of the Green Meadows Foundation, held near Zurich, Switzerland.

The foundation was established by the late Gottlieb Duttweiler, founder of Switzerland's first chain of supermarkets.

“Discount houses have introduced the significance of space and time to merchandising,” said Barnet. “It is a concept appropriate to the space age.”

The main element of novelty in the discount house is that the attention of management is fixed on the net return on capital invested, he said.

Traditional thinking, by mass distributors such as the food chains, has focused on gross margin as a percentage of volume, said Barnet. Unbelievably, there has been almost no discussion of net profit or of net earnings as a return on capital.

Under the pressure to cut costs and increase profits there must be a conscious consideration of fixed and variable costs to attain

return on capital, Dr. Barnet said.

It is not enough for the discount house manager to know his profit on each item after variable costs. He must include fixed costs for each item. He must also know how many of each item he sells in a given period of time so that he can determine profit in relation to time.

Labor costs and fixed costs can then be divided by the same factor and by the area or volume of the store's selling space so that the manager knows for example, how much each square foot of space costs for each week, said Barnet.

Assigning these fixed costs to each product, on the basis of the store space occupied by the product, makes it possible to compute the space that might reasonably be assigned to a given item, he said.

Since the depression (1) the population has increased, (2) the distribution of income is more nearly equal, expanding the middle income group and (3) the income per person has more than tripled. These three factors have produced a tremendous increase in retail sales.

You Help Create Pollution

By BOB ROSS

Of The State News Staff
First of 2 Part Series

Do you use a dishwasher, a washing machine, a garbage disposal, or a swimming pool?

Do you work for a company that manufactures a product requiring the eventual disposal of detergents, insecticides, or chemicals?

If the answer to any one of these questions is "yes" then you are helping to create a national menace: the shortage of water.

Don't think this is a problem for the future. The government's estimate of 1980 as the time when supply and demand would break even has been shortened to 1970 or before.

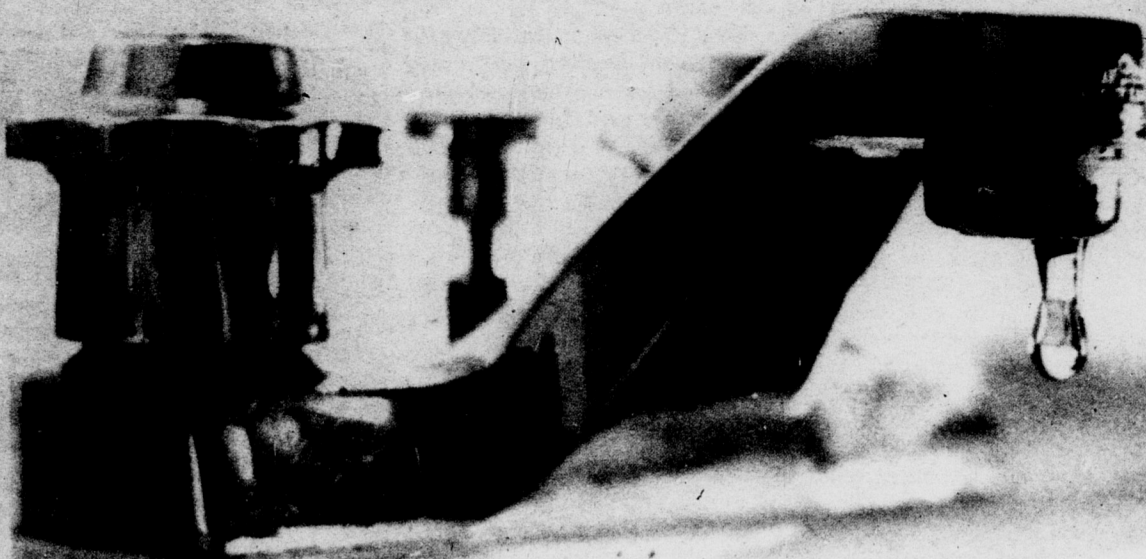

A staff report of the House of Representatives Committee on Science and Astronautics has released data showing that the total dependable supply of water in 1960 was 315 billion gallons daily. The daily water used in 1960 was 323 billion gallons.

The government estimates that the dependable supply of natural fresh water which the United States can expect to capture and use by 1980 is about 515 billion gallons a day.

This figure may seem impressive but three factors have darkened the picture.

First, the population explosion is no joke even though some would like to minimize the problem.

Next is the increasing size

THIS DROP OF WATER will add to the world's water pollution problems. With impure water becoming a menace even with the wonder-age anti-pollution devices, pollution

experts, economists and city-fathers across the nation are battling a serious problem. --State News Photo.

of the nation's cities. Los Angeles, Chicago, Oklahoma City and others anticipate heavy drains on their water supplies in the near future.

Industries have always been a problem. Today the concern is not only their heavy use, which is 40 per cent of all the water consumed in the country, but also their pollution of surrounding rivers and streams.

The Potomac river not only

has the distinction of running through the nation's capital but it is also widely known by area residents as providing one of the foulest stench in the nation.

The federal government has stepped into rectify this situation. Industries along the banks of the Potomac have had to look elsewhere for dumping grounds for refuse.

Take a look now at the problem from a local level. East Lansing provides a picture of what lies ahead for the nation's cities.

A report for 1962 by Hubbell, Roth and Clark, Inc., consulting engineers from Birmingham, shows that for the year preceding, there were 30,198 residents in the city limits. Of these, 14,480 people were served by the city's eight water wells.

Michigan State provides its own water.

By 1982 the firm predicts that

Brown Ingham Counsel

Thomas Lee Brown, 1957 Michigan State graduate, was appointed assistant prosecuting attorney for Ingham County, which includes the University, Prosecuting Attorney Leo A. Farhat said today.

After graduating from Michigan State, Brown went on to attend the University of Detroit Law School. He was admitted to practice in January this year.

the city will have to provide water for 37,150 residents. Ultimately this figure will rise to 50,360.

In the past year, the consumption rate was 100 gallons per person per day. The study shows that when the gallons per person per day reaches 250, the city will have to curtail usage.

East Lansing can consider itself fortunate though. Over 1,000 of the nation's municipalities faced a water shortage in 1957.

Fifteen out of every 100 cities were forced to cut supply. Dallas, Tex., had to sell its water for as much as fifty cents a gallon.

If it's any comfort, the water problem is not new. In 49 B.C. Julius Caesar found his troops very dry during the siege of Alexandria. He produced some fresh water by using primitive

solar evaporators to separate salt from sea water.

But technology stood there for nearly 2,000 years.

Apparently, the only solution to the nation's, and indeed the world's, need is convert the salty sea water into fresh water.

The U. S. Government first expressed an interest in this in 1952. Immediately there were some "ingenious" inventors who thought they had the solution.

One biologist was quick to point out that certain living organisms crave salt to such an extreme degree that they extract it from sea water and store it up in their body fluids.

Thus, we would have merely to turn untold numbers of these organisms loose on the sea, wait until they were full to the gills, then return them to shore somehow and have at the sea water.

One engineer, not wanting to do with anything so technical as organisms, hit upon the idea of lassoing icebergs in the Arctic seas, then towing them south to points in more temperate zones. Melt and serve.

However, when it came time for finding money for this project, the iceberg cowboys had a tough time convincing many Congressmen.

Part II of this series will deal with the several methods of saline conversion, which is converting sea water into fresh usable water for private homes and industry.

These processes are already being used in certain parts of the world, including America. Even conservatively speaking, saline conversion will have much to do with the future survival of the race.

Fresh water is running out.

Cowboys Creating Wakes Irk Most Good Water Skiers

(This is the last of three stories on water safety).

By EDWARD S. KITCH

CHICAGO (AP) — Water skiing can be enjoyed by any good swimmer.

The sport is easy to learn and does not require a great amount of athletic ability, but certain rules should be observed to insure utmost safety for himself and others.

Occasionally a skier, through ignorance or inexperience, will do things which irritate others in the same waters. These "cowboys" cut close to swimmers and fishermen, creating heavy wakes that curtail the fun of novice swimmers and fishermen in small boats.

Such disregard of ordinary common sense and courtesy is condemned by most good water skiers. They believe that most "cowboys" can be cured by enrolling in water ski clubs where they can learn the finer points of the sport.

Because skiing should never

be done in less than five feet of water, a novice swimmer should improve his swimming before trying on skis. A flotation device worn by all knowing skiers is no substitute for swimming ability.

Water skiers take plenty of spills and water isn't very soft when it is hit at high speed. Special equipment has been designed for protection.

The National Safety Council recommends wearing a vest or life jacket. This will help keep the skier's head out of water if an impact leaves him breathless.

Such jackets, meeting Coast Guard specifications, may be obtained and used as boat equipment as well as for water skiing.

There should be an extra person in the boat to act as an observer. Skier, observer and operator should know all the natural signals to start, adjust speed, change direction and stop, plus the "I am OK" sign following a fall. Hands clasped over the head after a fall is a signal that "all is well."

A fallen skier should be approached from the pilot's side.

Skiers should not try to land directly into shore. If approaching shore too fast, sit down on the skis.

Don't wrap the rope around any part of the body.

A special flag (white background with red diagonal bar) should warn other craft to stay away from a boat trailing a towline up to 75 feet in length.

Faulkner

(Continued from Page 2)

consciousness.

Where Faulkner criticism will go from here is not easily determined; but the appraisal will have to begin with the hugh heaving mass of regional life discovered in the novels, as if one writhing coil after another of a serpent-like saga were being revealed. Yes. The force and fertility are there.

America's literary might has considerably weakened now. To lose two such men as Hemingway and Faulkner in slightly over a year is staggering.

Who will fill the gap?

Do not think it factitious or overstated that American students bear a great responsibility.

Martinez Appointed

CHICAGO -- Ray Martinez, who gained his master's degree from MSU in 1960, was appointed consultant to the school trans-Safety Council, council officials said today.

Sunday Broadcasting For WKAR Station

MSU radio station WKAR resumed Sunday broadcasting July 1.

The station was forced to cancel Sunday operations last year as a result of budget restrictions by the legislature. WKAR director Lawrence Frymire disclosed that the station has derived additional income from engineering and recording projects for other MSU departments.

Synwolt Heads

Methodist Church

The Rev. Royal Synwolt has been appointed pastor of the Mt. Hope Methodist Church. He will replace the Rev. Warren Brown who was pastor of Mt. Hope for 11 1/2 years.

Brown will move to Travis City to become pastor of the Central Methodist Church there.

Synwolt comes to the East Lansing church from seven years service in the Portage Township area around Kalamazoo.

He graduated from the University of Illinois with a degree in commerce and then studied at the Garrett Theological Seminary in Evanston, Ill.

Synwolt is married and has three small children, two boys and a girl.

I sold it for only a few pennies a day through the Campus Want-Ads.

Onions - Tearful But So Useful

The one vegetable that brings tears to the eyes of nearly everyone is the onion. But this "tear-jerker" is almost universally used as a vegetable, seasoning or ingredient in numerous food preparations.

W. Smith Greig, Michigan State University agricultural economist, points out that onions are one of the principal seasonings in catsup, chili sauce, meats, mayonnaise, pickles and many other commercially prepared, commonly used food items.

While the average homemaker has historically used fresh onions, they can now buy them canned, frozen, dehydrated and even as onion juice. From these basic forms, they can be made to suit the needs of nearly everyone.

Dehydrated onions may be sliced, flaked, minced, powdered, or chopped. Furthermore, chopped onions may be frozen in such a way that consumers can remove what they need from the container and return the unused portion to the refrigerator.

Michigan ranks fourth in onion production behind New York,

Ex-MSU Staffer College Head

John W. Henderson, MSU alumnus and former staff member, has been selected president of Iowa Wesleyan College, Mount Pleasant, Iowa.

Henderson received his M.A. and Ed.D. degrees at MSU in 1950 and 1958. He served at MSU as an assistant placement officer during 1951 and 1952.

Returning to MSU from Provost Marshall General School, Augusta, Ga., in 1955, Henderson worked as an education and evaluation consultant. He served as Assistant Dean of Students from 1956-1959, when he accepted a position at Western Illinois University, Macomb.

Henderson remained as Dean of Student Personnel at Western Illinois until his appointment as president of Iowa Wesleyan this week.

Ph. D.'s Head for Industry

(Continued from page one)
 ple receiving the top degree in 1956 in this area went (or stayed) in the professional teaching ranks; only six per cent went into industry; one per cent to government with the remaining 11 per cent unaccounted for.

The logical reason for this would seem to be that there just aren't many industries interested in hiring specialists in Middle English or 18th century philosophy.

But Dean Tucker says this doesn't entirely explain the situation.

"People who go into the humanities know that this is what they like," he said. "Thus, the thing is to get people interested in college level teaching."

And he added: "If you had more money, you could hire more physical scientists; but more money would not necessarily get more humanities teachers."

Charles P. Wells, head of the mathematics department, has outlined the problem in science:

"Three hundred Ph. D.'s are granted each year throughout the U.S.," he said, "but we could use three times that many. Industry claims they could use another 10,000."

"Because of the shortage," he continued, "we fill in with people capable of teaching with an MS degree. Small colleges take the brunt of the deal."

When asked about the diffi-

culty of writing a Ph. D. dissertation these days, Wells replied: "You try to discover something new in math. This is what the Ph. D. would like to do. More math has been discovered in the last 50 years than in all the years since Euclid."

"In Algebra and in new fields like Topology, the most progress is being made."

On the number of graduate students enrolled in math at MSU, the department head had this to say:

"There is an increasing number of undergraduates going into graduate work. But we have 500 undergraduate majors and only 70 graduate students."

"They (the undergraduates) can get good salaries in industry with a BS degree. We are getting more and more federal support in the way of fellowships."

"As for getting these students to stay on and teach, it is very difficult. The computing field takes so many of our Ph. D.'s. IBM has said that they could use all the Ph. D.'s the country could produce."

"This demand," Wells continued, "has come about mostly since the atomic age came into being about 10 years ago."

Closing on an even more somber note, he added:

"Russia has some of the best mathematicians and physicists there are in the fields of pure research."

On the other side of the cam-

pus, James D. Rust, acting head of the English department, had some interesting things to say concerning the situation of humanities.

"There is a definite shortage of college teachers," he began, "and the graduate schools can't turn out enough teachers at the college and university level. The demand just exceeds the supply."

"Enrollments in the graduate schools are rising and the only way one can train for college teaching is by becoming a 'master' of his subject."

"Such schools as Michigan, Wisconsin and Ohio State will have many students who won't see a professional until their junior year."

But there is one brighter side of the picture. Rust added: "There is a real revolution or evolution going on in American education in the increasing emphasis on quality in public school facilities. This is being reflected in the increasingly better students we're getting who are prepared for independent study."
