**News & Views**

**News & Views**

**EGGS - LOW COST PROTEIN**  
**SCRAMBLED EGGS**, fried eggs, souffles, omelets, hard or soft boiled, any way at all, eggs make a quick, easy, and nutritious meal. Here's a list of suggestions and facts about eggs everything you always wanted to know about eggs, but were afraid to ask.

**STORE EGGS** covered or in their carton in your refrigerator. Keep the large end up to keep the air cell at the end and the yolk centered. Avoid storing eggs in the refrigerator door. Constant opening and closing of the door can cause shaking and a breakdown in the quality of the eggs.

**GOOD QUALITY FRESH EGGS** stand up. That is, when broken into a dish, the high quality fresh egg has more thick white and doesn't flatten out. The amount of thick white decreases as the egg ages and the egg spreads out more.

**HARD-COOKED** fresh eggs are difficult to peel. To make eggs easier to peel, let the eggs set at room temperature overnight before cooking them. Eggs also beat up faster and to a larger volume if brought to room temperature first. But - only remove the amount you need from the refrigerator.

**EGGS ARE COMMONLY** sized extra large (27 ounces), large (24 ounces), and medium (21 ounces) per dozen. A dozen eggs weigh about 1 1/2 pounds in the shell. If a dozen large eggs sell at 85 cents, that would be less than 60 cents per pound for this protein rich food.

**IF THERE'S LESS** than an 8 cent price spread per dozen between sizes, you'll get more for your money by buying the larger size.

**EGGS**, low cost protein, are delicious and nutritious at any meal. At Meijer we want you to know.

**ENERGY SAVING TIP**  
**OVERCOOLING** is expensive and wastes energy. You might not want to use or buy more cooling equipment than you actually need.

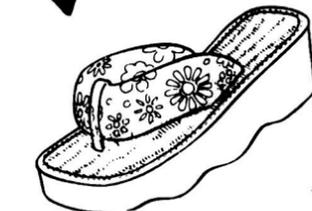

**IF YOU NEED** central air conditioning, try to select the smallest and least powerful system that will cool your home adequately. A larger unit than you need not only costs more to run but probably won't remove enough moisture from the air.

**ASK YOUR DEALER** to help you determine how much cooling power you need for the space you have to cool and for the climate in which you live. If you're in the market for a room air conditioner, you should be aware of the Energy Efficiency Ratio numbers that were developed for those appliances.

**THE ENERGY EFFICIENCY RATIO (EER)** is a number that rates the energy efficiency of similar appliances. The higher the EER number, the more efficient the appliance.

**EXAMPLE:** EER's for room air conditioners can be as low as 5.4 and as high as 11.5. The 11.5 rated room air conditioner is more than twice as efficient as the 5.4 unit and uses less than half the electrical energy.

**MANUFACTURERS** and dealers display the EER numbers in different ways. If you cannot find the EER number of the models you are considering, you should be able to get the information from the dealer.
